THE MASTERS COLLECTION

IT WILL HOLD YOU CAPTIVE FOR DAYS.

Welcome to the world of Bantross. Where monsters don't just *look* menacing. They lunge directly at you, ready to wound, paralyze or kill.

Where whistling wind, roaring surf and echoing footsteps mix with the sound of your own heart pounding.

3-D effects and incredibly realistic first person views make the action even more spine chilling.

Where earthquakes, floods and a treacherous baron wreak havoc on entire continents.

Where you'll need exceptional skill, cunning and magic to survive.

You'll wander through ancient archives where torches glow against damp walls. You'll venture into 40 levels of dungeons. Journey to 16 different towns. Explore a mysterious labyrinth. Play games of chance, arcade games and far more.

Torches flicker and crackle in the archives, where you'll acquire secret knowledge and strategic skills.

The Legend of Blacksilver provides all the depth and challenge worthy of a skilled adventurer. Intrigue. Danger. Complexity. Unparalleled realism. All others are tame by comparison.

Advanced Hint Book available. Details on package.

Scores of maps give a global perspective. You'll see geography change with earthquakes and floods.

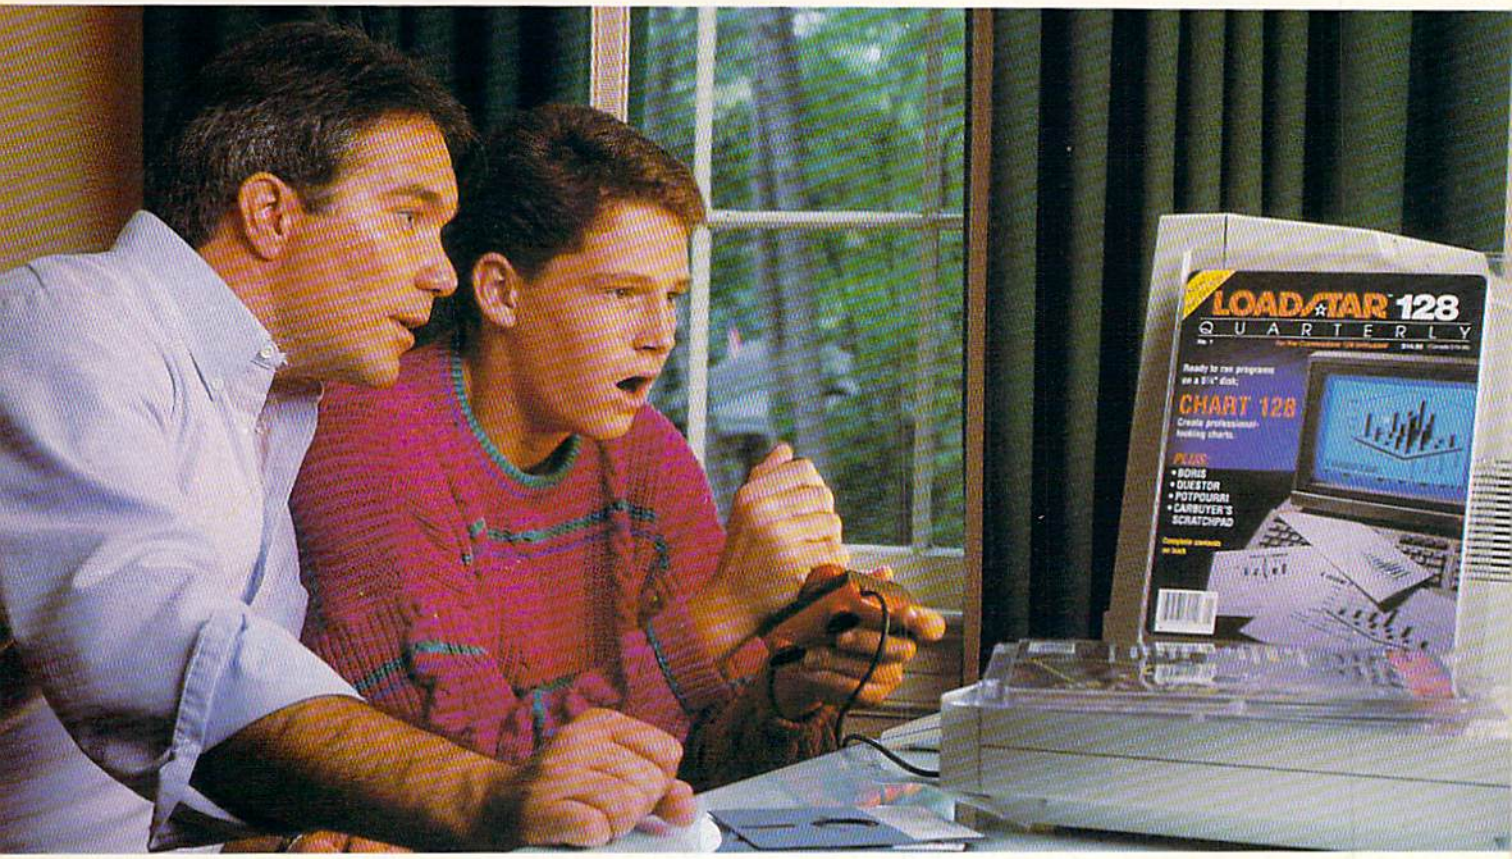

To order your preview disk, send a check or money order for $3.75 (Canada: add 50¢) to: Legend of Blacksilver Preview Disk, Softmail Code 155-013, 2995 Woodside Rd., Ste. 400-383, Woodside, CA 94062. Allow 4-6 weeks for delivery. Offer expires 3/31/90. Valid only in continental U.S. and Canada. Void where prohibited. Specify: Commodore 64/128.

Apple II and compatibles, Commodore 64/128, IBM PC and compatibles. Screens from Commodore. © 1988 Epyx, Inc.

SEVEN WAYS TO MAKE YOUR COMMODORE SCREAM

1) EXPLOSIVE COMMANDO RAIDS.

Now you can take the world's number one arcade game home! All the action-packed arcade thrills of this awesome hostage rescue are ready for home video play.

2) SUPER-HUMAN WARRIOR LORDS.

Now you can thrill to one of the biggest-ever coin-op hits on your home computer. Rastan's mind-blowing graphics takes you to a magical land of adventure and excitement.

THE ONLY GAME IN TOWN.™

TAITO

COMING SOON, THE CLASSIC MIND GAME, QIX.

Taito,® Arkanoid,™ Renegade,™ Alcon,™ Bubble Bobble,™ Sky Shark,™ Rastan™ and Operation Wolf™ are trademarks of Taito America Inc. Copyright © 1988. All rights reserved. Commodore is a trademark of Commodore Electronics, Ltd. Advertisement by: Qually & Company, Inc. (Chicago).

3) BUBBLE BLOWING DINOSAURS.

The #1 game in Europe for 3 months. Scramble through 100 screens as your brontosaurus buddies, Bub and Bob, drive you crazy with non-stop action.

4) DEATH-DEFYING ACES.

Take the arcade's meanest air battle home for keeps. Strap in for explosive high-flying action. Hold on for your life as you soar through incredible graphics.

5) INTER-PLANETARY WARFARE.

Now you can blast into one of the hottest arcade space games right in your own home. It's the ultimate inter-planetary combat. You've never seen action like this.

6) OUTER SPACE GRID MONSTERS.

Don't settle for imitations. The game voted "one of the best home video games ever" by Electronic Game Player Magazine is ready to blast into your home.

7) RAGING STREET RUMBLES.

This is the original arcade hit. Thrill to the arcade quality graphics of this fast-paced, street-style karate brawl. Find out what real action is all about!

Taito games will make your Commodore scream with the sights and sounds of arcade action, adventure, survival, destruction, heroes, villains and heart-pounding thrills.

These are the world famous arcade originals and they're ready to wail on your Commodore. Arkanoid,™ Alcon,™ Bubble Bobble,™ Operation Wolf,™ Rastan,™ Renegade™ and Sky Shark™ will make your Commodore do things you didn't think were possible.

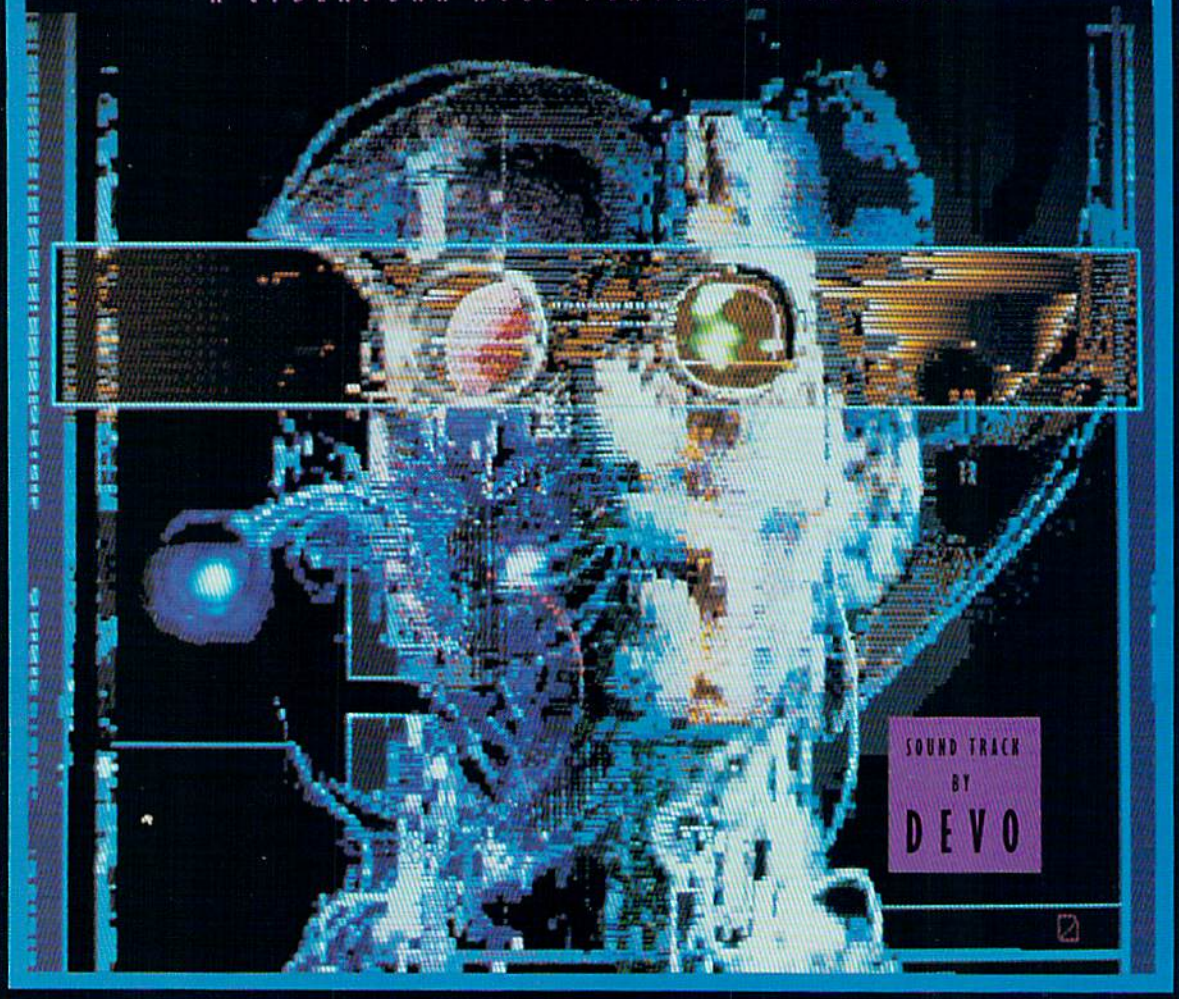

Everyone knows that arcade games are the benchmark for all other video games and Taito has been an arcade leader since 1953. Since then we've made over 1,000 classics for arcade and home play. Count on Taito to bring the heat of the arcade to your home computer.

Buy Taito products at leading stores everywhere. Visa/MasterCard holders can order direct anywhere in the U.S. by calling 1-800-663-8067.

IN A HUNDRED YEARS, HACKING WILL GET YOU KILLED.

NEUROMANCER™

A CYBERPUNK ROLE-PLAYING ADVENTURE

Nowadays, hacking can get you into trouble. A hundred years from now, it can get you killed.

Actually, death isn't bad. It's better than being a "Wilson". Of course, any hacker in his right mind would rather be a Wilson than lose all his neurons.

So what have you got going for you? About 30 megs on line, several viruses, and a wise-cracking ROM construct tagging along. You're just a cowboy trying to stay a step ahead of the AI's in a world where paranoia's not an illusion, everyone IS trying to flatline you.

It's party time in Cyberspace.

- Drawn from the pages of the smash cyberpunk novel "Neuromancer" by *William Gibson*
- Skill-based role-playing game by the designers of "The Bard's Tale™" and "Wasteland™"
- Original Sound Track by DEVO
- Soon to be a major motion picture from *Cabana Boy Productions*
- Multiple paths to a successful conclusion

Now available for the Commodore 64/128, Apple IIc, IIe/128K. Coming soon for the Amiga and IBM/Tandy.

If you can't find NEUROMANCER at a local dealer you can order direct at 1-800-227-6900.

RUNning Ruminations

HOW MUCH HAVE YOU CHANGED in the past three years? We thought it would be appropriate at this juncture to take a look back over the past three years to find out how much. In a survey of *RUN* readers conducted three years apart—one in the fall of 1985 and one in the fall of 1988—some notable differences emerged.

In comparison with the reader of three years ago, the composite *RUN* reader of 1988 is older (42 years vs. 30), better educated (71% vs. 58% attended college), more professional (fewer students), male (although the percentage of women readers has increased 6%), married (up 17%) and better paid ($44,100 vs. $36,100 annually.)

As our readers' financial status has changed, the number of peripherals purchased for their computer systems has increased. Consider this: In 1985, the typical *RUN* reader spent an average of $776 for his hardware system. By 1988, that average number had skyrocketed to $1224.

Is the Commodore user better off today than three years ago? You bet!

The class of '85 was interested in upgrading to a color monitor and a letter-quality printer (this is an aspiration of many of today's Commodore users). Many were dreaming of the day they could put away forever their Datassette and embrace floppy disk technology.

Today's user, of course, has a color monitor and disk drive and aspires to own a 3½-inch drive, or even a hard drive, a letter-quality printer and additional memory for his system.

Although some of our readers have switched to other computing systems, for the most part, they've stayed with the Commodore line of computers, upgrading from a VIC-20 to a C-64 to a C-128.

If there's one constant in the computing industry, it may be that pundits are too quick to predict the demise of the home computing market. For three years, they've been saying that the Commodore eight-bit market is dead. Several factors have forestalled this event.

First, the introduction of the 128 (and, later, the 128D). Commodore struck a winning note when they introduced this computer that's both hardware- and software-compatible with the 64, yet includes several additional features, such as an enhanced Basic, that make it a user's delight.

Second, the emergence of GEOS as the answer to 64 and 128 owners' productivity needs. This product introduces the Commodore user to menus and icons and marks the biggest difference between the user of today and that of three years ago, when this program was not yet available. GEOS appears to have taken a firm hold among *RUN* readers, about 50% of whom own and use it and its numerous related programs.

Third, the comeback of entertainment software. We've witnessed videogame conversions for the 64/128 and a renewed interest in this market by software developers. Also, games are much more sophisticated today and appeal to a larger audience. Productivity, however, remains a primary application among *RUN* readers.

In addition, some of the applications possible today, such as desktop publishing, were unheard of for the Commodore eight-bits in 1985. There's more hardware and software, including public domain sources, to choose from. The pricing is better, and users get more computing power for their buck. Given these advances, it's safe to predict that years of computing activity and discovery remain for 64/128 users.

MAGIC

Copying the C-128 DOS Shell; saving screen space with a mini-scrolling menu; and making the shift sound like a "Morse code" key.

Compiled by TIM WALSH

$503 Speaking of Quick Reference. . .

Lots of people use Rolodex card holders to keep names and addresses of friends, relatives and business contacts. Computer users like myself also find the design of these devices handy for another use—Magic tricks from *RUN*. I owned a large, cumbersome Rolodex, a birthday present that was awkward to use for business, so I switched to a smaller one for that purpose and the large one has done nicely for the last few years as a quick reference tool for locating previously published Magic tricks.

Rolodexes are arranged in alphabetical order, so cards in the A category contain tricks dealing with topics such as arrays and addition, the B category has hints and tips on binary numbers and BLoad enhancements, and so on. I also include the author's name whenever possible and the issue in which the trick appeared. If space permits, I include the trick itself.

While my friends are fussing and waiting for their databases to load so that they can retrieve computing information, I have everything I need right at my fingertips. Try the Rolodex trick; I think you'll like it!

—Marty Rivers, San Diego, CA

$504 By Jiminy, Did You Hear That?!

If you're writing a text adventure or interactive game and want to create the mood of a warm summer evening, run this little routine of mine on either your C-64 or C-128. It creates the authentic sound of crickets chirping at random intervals. Of course, this may fall into the wrong hands and kids might try to drive Mom, Dad or their favorite little sister crazy with this sound. So, listen up, kids: Be sure that you let the folks know it is just your computer, before they call in expensive exterminators!

$505 Mailing Label Alternative

If you want to print just one or perhaps several mailing labels, you know the process is a tedious one. First, you must remove the continuous form paper, re-adjust the tractor feed sprockets, crank in the mailing labels, waste half-a-dozen labels trying to get them aligned correctly, and. . .well, you get the picture.

So, do what I do! When printing several labels, print them out on standard continuous-form computer paper, cut the labels out with a pair of scissors, then glue them to the envelope or package with contact cement. The process wastes a sheet of computer paper, but it also saves a lot of time and aggravation.

—Dave Wilson, Marietta, GA

$506 C-64 Text Screen Saver

Wouldn't it be nice to save a screen containing text *and* graphics characters? The next time you create a screen worth saving, run 64 Screen Saver first. When the screen you want to save appears, press the Commodore and F1 keys at the same time. The screen will be saved as a four-block file called TEXT, as you can see in F$ in line 10 (but you can use any filename). To load and display your creation, enter LOAD "TEXT",8,1.

$507 C-128 DOS Shell Copier

Creating a working copy of the C-128 DOS Shell from the 1571 Test/Demo disk perplexes all but the most skilled programmers. My listing, DOS Shell Copy Boot, simplifies the procedure to give a copy that works as well as the original.

Boot the DOS Shell program. Once it's activated, select the File Copy option. Copy the file named DOS Shell and save it to a second disk. Then save my program to the second disk. Whenever you want to activate the Shell, just run my program. There you have it: a perfect DOS Shell copy!

$508 64 Mini-Scrolling Menu

When your screen space is limited, but you need to display a menu with many options, a stationary display is not the answer. You can display the needed text along with eye-catching animation by using 64 Mini-Scrolling Menu, a horizontally scrolling menu routine that uses only one screen line to display the options.

To incorporate the routine into your own programs, use lines 20–110 of the listing. In line 30, C$ defines which keys are used to make a selection. A$ in line 40 contains the message to be scrolled. You'll also need to modify the On-GoTo statement in line 80 to direct program execution after you make a selection. The menu outline matches the current cursor color, while the color of the menu bar is determined by the last CHR$ code in line 60.

Pocket Author™
For the C-64

New, exciting creative software from the company that brought you the world famous, best selling "Pocket™ Writer".

Pocket™ Author breaks new barriers. Now you can create your own software applications without an in-depth knowledge of programing.

With Pocket™ Author you can:

- create your own applications with pull down menus, screen management and mouse or joystick control.
- design pop-up menus with as many as eight overlays.
- move an arrow to select an "icon" or image area to be filled with text or pictures.
- "multi-task" sound and animation.
- draw or paint images.
- use the many, many other excellent features.

With Pocket™ Author, you can create games, question and answer programmes, business and educational applications, animation sequences, music, and almost anything you can imagine. The manual contains a tutorial to get you started. There are over 20 help screens summarizing how to use Pocket™ Author. Also included are examples and utilities to facilitate making your own icons and help screens.

Don't wait! Order Pocket™ Author today! You can get the newest breed of "Creativity Software" only from Digital Solutions. Send in the Order Form below or call 416-731-8775 [credit cards orders only].

Regular price is $59.95 U.S.[$69.95 Cdn.]
But, our Special Introductory price is only $39.95 U.S. [$49.95 Cdn.] and We pay all shipping and handling charges.

Ontario residents add 8% Provincial Sales Tax of $4.00 [Total of $53.95]

Please send me Pocket™ Author

$50A Linespace 64

Linespace 64 is an interrupt-driven program that changes the line spacing of a Basic listing as it's being printed. After loading and running the program, enter a Poke 681,X command, where X is any value from 1 to 255, to determine the spacing. As a demonstration, the program defaults to triple line spacing. You can direct the output to the screen, a printer or a disk drive.

```

$50B More on GEOS and Printers

Because of space constraints in last month's geoWatch column, I was unable to address a GEOS question posed by many readers. In my most recent printer article ("Printers on Parade," *RUN*, October 1988), I mentioned that printers can be set to a desired graphics density and that line spacing can also be set prior to activating GEOS. How, many readers have written in to ask, is that accomplished?

Actually, no secret programming skills are needed to perform the magic on either GEOS 64 or GEOS 128, but you need a printer with more than one graphics density. If you're using an interface, set it to Transparent mode so that unwanted codes do not interfere with your printer commands. Next, with the computer and disk drive(s) on and the printer on and online, enter the command that sets the desired density, followed by the command to set line spacing. (Check your printer manual for exact details on selecting densities and line spacing.) For demonstration purposes, a typical density command might appear as:

```
OPEN 4,4: PRINT#$, CHR$(27),CHR$(90),CHR$(2),CHR$(3),
  CHR$(1),CHR$(255):CLOSE4
```

A typical line spacing command might appear as:

```
OPEN 4,4:PRINT#4, CHR$(27),CHR$(51),CHR$(22):CLOSE4
```

Once you enter the command to set the density, the printhead will move a fraction of an inch or make a sound. At that time, you can activate the GEOS System disk. C-64 users should enter: LOAD "0:*",8,1. C-128 users just type in BOOT and press return.

Be sure to select a printer driver, such as Epson FX-80, that will allow the printer commands to remain active. Commodore-compatible printer drivers will corrupt the printer commands you entered prior to booting GEOS. Have fun experimenting with various densities and line spacings!

—Tim Walsh, Magic Columnist

$50C Stars and Spheres Spectacular

Once you type in and run Stars and Spheres 128, a 40-Column mode program, the fun begins. First, stars slowly fill the black screen, after which five overlapping spheres are drawn in 3-D. Once the drawing is complete, pressing a key brings you back to the text screen. Pressing a key again redisplays the graphics screen.

```

$50D 64/128 Spinner

In fairness to 64 owners who can't view the above program

in action, I've written a program that's almost as exciting. 64/128 Spinner draws and animates a figure that looks like an anemometer. When the program runs, it gives the illusion that the figure is spinning. 64/128 Spinner works on the 64 and on the C-128 in 40-Column mode. To change the background color in 80-Column, Direct mode, use the command Color 6,X, where X is a value from 2 to 15.

```

MAIL RUN

Readers can order a freebie, donate PETs or get tech help—all without leaving the comfort of their workstations and game rooms.

READ ALL ABOUT IT

I would like to let your readers know about a free monthly newsletter dedicated to Commodore computers, called *Monthly Review*. Anyone who would like to receive it can send their name and address to Newsletter, Computer Graphics, Inc., 202 York St., Suite 14E, Brooklyn, NY 11201, Attn.: R. Keith Philip, Administration.

—SIMON THOMAS, DIRECTOR
BROOKLYN, NY

PETS FOR CHILDREN

I'm trying to acquire several used Commodore PETs and CBM machines (8K–32K) that I'll recondition and donate to a nearby children's center. If any of your readers would like to donate old tape and disk libraries and Commodore-specific publications that they have no use for, I'll edit them into levels appropriate for each age group. I won't be able to return the items, so please don't send anything valuable. My address is PO Box 401, St. Vital Post Office, Winnipeg, Manitoba, Canada R2M 5H3.

—STEVE GREENE
WINNIPEG, MANITOBA, CANADA

GEOREAD

I regularly read your geoWatch column. Is there a publication dedicated to GEOS applications?

—CLAUDE BLAIS
ST. HUBERT, ONTARIO, CANADA

There sure is! It's called geoWorld *and is published monthly at 38 Santa Ynez St., Santa Barbara, CA 93103.*

—EDITORS

HELP WHEN YOU NEED IT

A few months ago I had a problem with my disk drive, and I called the *RUN* offices for help. Everyone there was very nice and tried their best to solve my problem. When they couldn't, they called me back long distance, just to give me some phone numbers of people who might be able to help. I'll remember this come subscription renewal time. Thank you for your assistance.

—GLEN DRAKE
GRAND BLANC, MI

COPYRIGHT POLICY

You are deceptive advertisers. Allow me to quote from your "Magic Trick Writer's Guide": "If you have an idea to make computing easier. . .send it to: Magic. . .*RUN* pays $10 to $40 for each trick published. . ." While you go to great lengths to tell readers what they'll get, you never tell them what they must give up. Magazines like *RUN* hold a copyright on every piece of software they publish, which means that contributors must give up *their* rights to the software. I have a couple of routines and programs I'd like to share, but I'll never contribute them to *RUN*—I might want to sell them someday.

—GLENN C. PARKS
WASHINGTON, NJ

When RUN *buys software from an author, it is paying fair market value for the right to use that software in its publications and to ensure that such software does not appear in any other publication not affiliated with* RUN *magazine. If computer magazines did not purchase the rights to programs, there would be no point in having more than one publication, since it would leave authors open to selling their programs over and over again to anyone who wants to buy them, which in turn would lead to publications offering exact "clones" of programs.*

Besides, if another publication were aware that a program submitted to them had been published elsewhere, they wouldn't purchase it anyway, copyright or no.

Also, it's really up to the authors whether or not they wish to sell their rights to a program—if they don't, they simply needn't sign a contract.

—EDITORS

DOUBLE TROUBLE

I've been a computer user for 25 years and a systems engineer for a computer company. I own a C-128 and several Atari machines. I have had absolutely no problems with my two Atari 800XLs, a 130XE and a 1040ST. Even after years of using the Ataris, none has broken down, and I have never lost a file or had a disk go bad. However, I cannot get my new 128 to perform consistently. Now I know why Atari users are so loyal—the Ataris are far better.

—DANIEL L. O'BRYANT
BLAINE, MN

We've a feeling we haven't heard the last of this. Let's hear from C-128 owners.

—EDITORS

SACKING, CRACKING & HACKING

I agree with reader Dan Crockett ("Why We Buy Through Mail Order," Mail RUN, October 1988). I have searched everywhere for software for my C-64, but every place I go, salespeople seem to think the 64 is a game machine. It's for this reason that I have resorted to sacking, cracking and hacking as a means of expanding my software library. No wonder 64 users choose mail order over driving 20 miles to a store that doesn't look down on the 64.

—ZACK POWER
OSHAWA, ONTARIO, CANADA

Now, That's Fast!

In your review of fast-load cartridges ("Rapid Transit Systems," August 1988), in reference to Final Cartridge III, you stated that you "could not save with the DSave command; possibly an equipment problem."

I am the proud owner of the Final Cartridge III, and I have never encountered such trouble. In a table accompanying the article, you listed the other five cartridges as all saving 130 blocks in 88 seconds. I checked the Final Cartridge III's save time—using the DSave command—and it saved 130 blocks in only 36 seconds.

—Robert Karon
Brooklyn, NY

Plea for Multiplan 128

For my spreadsheet purposes, I use Swiftcalc 128. However, this program lacks some functions I need for some of my applications. Could you tell me how to get a copy of Multiplan 128?

—E. F. Robinson, Jr.
985 Woodbridge Way
Conyers, GA 30207

Unfortunately, Epyx no longer markets Multiplan 128. We are publishing your full address so that distributors who still carry this program might get in touch with you.

—Editors

A Good Rule

Congratulations to Ellen Rule on her article, "Journey to the Center of Your Commodore," in your December 1988 issue. It gave me a new awareness of my computer's insides. Let's see more articles like this!

—Doug McNees
Ft. Pierce, FL

Candid Look at Q-Link

Please thank Loren Lovhaug for his revealing article on QuantumLink ("Telecomputing Workshop," *RUN*, December 1988). I'd been thinking of signing up with Q-Link, but no thanks; I'll shop for a *professional* service.

—Bob Renaud
Washington, MA

For an overview of the networks serving the Commodore market, be sure to read Loren's reviews of the GEnie and CompuServe systems in the January and February 1989 issues, respectively.

THE ULTIMATE
Word Processor from Digital Solutions

Here it is ...the ultimate in power ...the ultimate in ease of use...the ultimate in speed for your Commodore 64 & 128. All of the on-screen features that made Pocket Writer a 500,000 seller, plus these new exciting additions:

- Multiple columns. Print up to 4 newspaper -style columns.
- Macro capability. Record and invoke.
- Undo. To cancel last command.
- Markers. Mark up to 10 locations in one text.
- Book paging, odd-even and left/right.
- Line and box drawing modes.
- Word, sentence and paragraph count.
- Find/replace in either direction.
- Cursor movement by sentence and paragraph.

Pocket Writer™ 3

Professional Word Processor for the Commodore 128 and 64

Plus all the features you've become accustomed to:

- No complicated format commands embedded in text.
- Reads files generated by Pocket Filer 2 and Pocket Planner 2.
- On-screen text formatting and wordwrap. What you see is what you get!
- Automatic configuration for screen color, format and printer selection.
- Spelling Checker incorporated into both 64 & 128 programs. (Original Pocket Dictionary compatible)

Special Offer!

If you order your Pocket Writer™ 3 Program from Digital Solutions Inc. before January 31,1989, you will receive a Free Pocket Writer™ Template Disk (retail value 24.95 U.S. (29.95 Can.)

Don't wait! Order today! You can get the Ultimate Word Processor from Digital Solutions. Send in the Order Form or call 416-731-8878 or Fax 416-731-8915 (credit cards orders only) Price is $69.95 U.S. ($79.95 Can.) We pay all shipping and handling charges.

THERE ARE SOME THINGS YOU JUST CAN'T DO WITH GEOS . . .

only $24.97

. . . UNTIL NOW, THAT IS.

Introducing **GEOS Power Pak***, a collection of the most useful GEOS desktop accessories, utilities and applications ever assembled on one disk.

The editors of *RUN* magazine have packed this two-sided disk with over a half-dozen useful programs, a wide variety of fonts and over a hundred illustrations to use with GEOS. It features the work of some of the **BEST** talent in the GEOS market, including telecommunications expert Bill Coleman; font designers and artists Susan Lamb, Tom Trevorrow and Shaun Jones; and GEOS programmers Joe Buckley and Wayne Dempsey. This assures you, the GEOS user, of increased productivity and ease of use each and every time you boot up GEOS.

Discover how it feels to be a GEOS power user with the **GEOS Power Pak**. This disk will give you features unavailable anywhere else.

For example:

"The editors of* RUN *have assembled the best talent in the GEOS community for this disk!"

APPLICATIONS

—geoTerm is the first terminal program for GEOS. Before the **GEOS Power Pak**, this application had the experts stumped. But now you can telecommunicate to BBSs and online networks, sending and receiving messages, attending conferences and uploading and downloading programs.

—CardFile is a file manager that comes in handy to maintain lists. Use it as an address book or to keep lists of tapes, records or household items . . . the possibilities are endless.

FONTS

—Choose from a wide selection of character fonts and point sizes. All the fonts are original and unpublished. Suitable for letter writing, headlines or to spruce up any newsletter, memo or sign.

CLIP ART

—Pick from over one hundred illustrations to use in your own documents.

ACCESSORIES

—Thumbnail is a unique program that reduces full-page geoPaint images for display on the screen and to save to disk. Catalog your geoPaint collection or paste images into a geoWrite document.

—geoOrganizer is a disk utility that lets you rearrange your GEOS files quickly and easily.

—Pattern Editor lets you create your own fill patterns for use within geoPaint.

—geoBreak. Enjoy this classic arcade game.

—Convert 2.2. Convert GEOS data and programs for uploading and downloading with geoTerm.

—Write Hand Man. Word and document analyzer.

—AutoView. geoPaint slide show maker.

—PaintView II. View geoPaint pages.

Like the original GEOS program, the **GEOS Power Pak** greatly enhances the capabilities of your C-64.

Let's face it. You've invested lots of time and energy learning to use GEOS. The **GEOS Power Pak** returns this investment tenfold with easy applications, expanded capabilities and increased productivity.

GEOS Power Pak revolutionizes the program that revolutionized your C-64.

*GEOS Power Pak is a product of *RUN* magazine and is not connected with Berkeley Softworks, creator of GEOS, or Commodore, manufacturer of the C-64.

YES! I want to add more computing power to my Commodore 64. Send me the GEOS POWER PAK from *RUN* magazine for $24.97.

News and New Products

Games, books, music, several serious software packages and a bouncing baby Butterfield.

Compiled by HAROLD R. BJORNSEN

Be All You Can Be

BOUNTIFUL, UT—In Heavy Metal: Modern Land Combat, Volume I, an action-strategy war simulation, players start out as second lieutenants with the opportunity to work up through the ranks based upon performance in the field. Play begins in the war room where you devise a strategy to overrun enemy positions. Once the strategy is set, you then move directly to the front line, in command of any of three modern weapons systems in battles going on at three different fronts at once. It's available for the C-64 for $39.95. Access Software, Inc., 545 West 550 South, Suite 130, Bountiful, UT 84010.

Check Reader Service number 400.

Do You Know Where Your Father Is?

CAMBRIDGE—Your name is Jason Youngblood, and you're living in a desperate world far in the future on an unknown planet. You learn that your father has led a crack squadron to meet the principals of an invasion, but has never returned. You're determined to fight off the enemy with 30-foot-tall combat robots and find your father, hopefully alive. BattleTech: The Crescent Hawk's Inception is available for the C-64 from Infocom (125 Cambridgepark Drive, Cambridge, MA 02140) for $39.95.

Check Reader Service number 401.

Three New Games

NORTHBROOK, IL—Mindscape (3444 Dundee Rd., Northbrook, IL 60062) has released three games for the C-64.

Out Run is a racing car game where players drive at speeds up to 200 miles per hour through woods, European cities, beaches and the Swiss Alps. $34.95.

In Space Harrier, you are Harrier, an astral exterminator charged with obliterating ghastly creatures with your laser blaster. $29.95.

In Alien Syndrome, you must rescue your comrades trapped inside an alien-infested genetic laboratory before it explodes. $29.95.

Check Reader Service number 402.

Color-In, Print-Out

BATAVIA, IL—With Holidays and Seasons, a coloring book program for the C-64, children (and adults!) can color 24 line drawings of their favorite holidays and seasons. (An Okimate 20 color printer is required for color printouts. A Commodore 1200 black-and-white printer makes pictures that can be colored in by hand.) They can also make banners and posters, and calendars with four-color stickers (included) for colorful illustrations. It's available from Polarware (1055 Paramount Pkwy., Suite A, Batavia, IL 60510) for $29.95.

Check Reader Service number 414.

Make banners, posters and calendars with Polarware's Holidays & Seasons.

Without a Clue

MOUNTAIN VIEW, CA—Pool of Radiance, the first in a series of fantasy role-playing C-64 games based on the Advanced Dungeons and Dragons game system, now has a clue book available separately for $12.95. *Pool of Radiance Clue Book* is a player's guide with maps of every location in the game and with all major encounters located and described. It also includes specific tactics on how to defeat the most challenging encounters, and all the passwords, mazes and illusions are delineated. In addition, the book tells you how to be a more effective player. Strategic Simulations, Inc., 1046 N. Rengstorff Ave., Mountain View, CA 94043.

Check Reader Service number 403.

Book of Law

NEW YORK—A new book from LLM Press (150 Broadway, Suite 610, New York 10038), entitled *SYSLAW: A Legal Guide for SYSOPS*, explains the legal rights and responsibilities of BBS operators. Written by two lawyers who are both veteran SYSOPs, the 100-page book concerns the legal consequences for those who run BBSs. You may order the book directly from the company for $19 plus $2 shipping and handling.

Check Reader Service number 404.

Bravo!

OAKLAND, CA—The C-64 music program, The Maestro!, claims the company (Zwetzig Associates, 5932 Bruns Court, Oakland, CA 94611), is almost entirely menu-driven and self-explanatory. Note, pitch, octave and duration are selected in a single operation. It provides the entire chromatic range of the 64's SID chip and any note duration from a 32nd note up-

ward, including triplets, dotted notes, double-dotted notes, grace notes, tied notes and nonstandard durations. It permits up to 1023 notes for each of the chip's three voices. $24.95 plus $3 s/h.

Check Reader Service number 405.

Crib Notes

ENGLEWOOD CLIFFS, NJ—*Keys to Solving Computer Adventure Games, Book II*, helps gamers work through their ideas with hints, maps and solutions to 23 current computer adventure games, many of them for the C-64. The hints and clues are in a scrambled format for seasoned players, detailed maps are keyed to the hints and clues and there are step-by-step solutions for new players. In addition, there's a special section giving tips on playing adventure games. It's available from Prentice Hall, Englewood Cliffs, NJ 07632. Price unavailable at press time.

Check Reader Service number 406.

Giddyap!

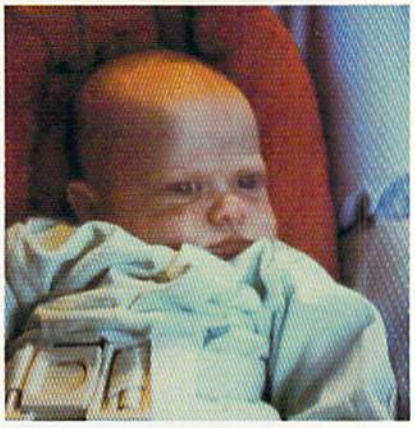

ASHEVILLE, NC—Turbo Master CPU is a cartridge for the C-64 that makes software run up to four times faster. In addition, it has turbo disk routines in ROM for five times faster loads and saves, and a DOS wedge in ROM. Turbo Master is compatible with most C-64 software, including programs written in Basic, machine language programs, GEOS, programs that move screen memory, and bitmapped graphics screens. A 24-page manual is included in the package. Available from Schnedler Systems, PO Box 5964, Asheville, NC 28813. $179.

Check Reader Service number 410.

For Quick Brown Boxes

TORONTO—QDisk, Version 2.0, a device driver for the Quick Brown Box RAM cartridge, which allows it to be used as a non-volatile RAM disk in the C-128's CP/M mode, is application transparent and can be used with all standard CP/M software. It allows partitioning of the 64K QBB into two 32K areas, so that the areas can be used for 64/128 Native mode applications or as separate CP/M drives. In addition, QDisk does not lose its contents when you turn the computer off: program and data files are safely stored. It's available for $9.95 plus $2 s/h from Herne Data Systems Ltd., PO Box 714, Station C, Toronto, Ontario, Canada M6J 3S1.

Check Reader Service number 408.

Suzannah Emily Butterfield comes complete with her own power supply; no disk drive required. However, issuing commands may be a little rough at first.

Baby Butterfield No Batteries Required

TORONTO—Mrs. Jim Butterfield, wife of the well-known Commodore guru, has released Suzannah Emily, a new daughter for the Butterfield family and hopefully compatible with a C-64/C-128 environment. Born last fall, Suzannah Emily presumably comes with a user's manual (*Baby Care*, by Dr. Benjamin Spock?). No word yet on any sequels. Stay tuned.

Awards Night

LONDONDERRY, NH—The Computer Games Developer's Conference, held annually in California, has given Origin, a games publisher, the Best Publisher award. Origin's executive producer Dallas Snell was pleasantly surprised. "Totally unexpected. . .I never even considered us to be in the running." Robert Garriott, the company's president, said, "This. . .shows that Origin's overall direction and positive author policies have been noticed and recognized by the industry as a whole."

HUNT VALLEY, MD—MicroProse Software, a publisher of simulation software, swept all three computer gaming awards at the 1988 Origins Convention, held in Milwaukee last August.

Pirates! was named the Best Fantasy or Science Fiction Game and for Best Screen Graphics, and Project: Stealth Fighter was named Best Military or Strategy Game. The Origin Awards are presented by the Academy of Adventure Gaming Arts and Design, an association of professional game designers, artists and developers.

Believe It or Not!

PHILADELPHIA—Heard out of the mouths of Commodore officials at last November's World of Commodore Show: ". . .Commodore will support the C-64 and 128. . ."; ". . .abandoning the C-64 would be dumb. . ."; "Commodore has agreed to work closely with educators. . .and get back into using Commodores for education. . ."; ". . .it's reasonable to be bitter about the past." [regarding getting someone in West Chester to answer the phone]; ". . .products are available upon demand. . ."; "Parts are available for responsible dealerships, regardless of machine."

The Philadelphia Civic Center was the site of the first annual World of Commodore U.S.A. According to a spokesperson for the organizers of the show, The Hunter Group, attendance was excellent, and it was a success for everyone involved.

A majority of the displays featured Amiga software and hardware, but end-user loyalty seemed to be split between 64/128 and Amiga.

Commodore manned a large booth, conducted a number of seminars and reiterated their support for the 64/128 line. They also promised, once again, to become a major force in the education market.

Stay tuned to this magazine for the latest from World of Commodore Toronto, held this past December, and from the World of Commodore show planned for this coming May in Los Angeles. (We'll also let you know if Commodore's quotes and assurances ring true in 1989.)

Talking Head

MARLTON, NJ—YodaHead Software (PO Box 177, Marlton, NJ 08053) has released Dragonfire BBS 128, a fully remote SYSOP bulletin board system for the C-128. The program supports 300-, 1200- and 2400-baud modems and is 1581 and IEEE compatible. Its 80-Column Fast mode allows up to 100 public message bases and 40 private message bases that can contain 100 messages each, and requires no SYSOP attention. ASCII and graphic output supports both sets of Commodore graphics and a full Email system is provided. It's available for $75.

SOFTWARE GALLERY

Gladden your Valentine's heart with a gift of arcade action, productivity or strategy software!

Compiled by BETH S. JALA

BUBBLE BOBBLE ..... A+

Help Bub and Bob
Beat the Bad Guys
In Battle!

Dinosaurs are hot! It's only natural that software developers would use these creatures in games. Taito has created gentle versions of the prehistoric animals for its C-64 adaptation of Bubble Bobble, a coin-op game that enjoyed great success in Europe.

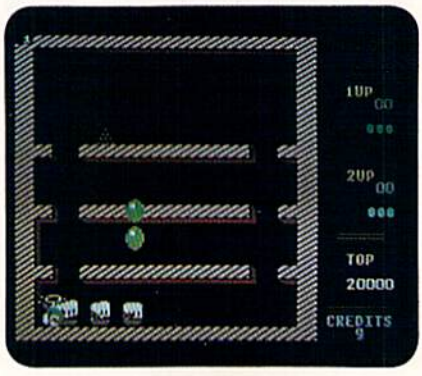

The story line goes that the evil Baron von Bonner has abducted two dinosaurs. Bub is the brontosaurus that one player guides in an attempt to free the captives, and a second player can simultaneously participate in the quest through an electronic surrogate named Bob.

Villains continuously attack the rescuers throughout their 100-level journey. Bub and Bob can dispose of these scoundrels by imprisoning them in magic bubbles. However, if the attackers get past this defense, they stun the dinosaurs; the game ends if this happens once too often.

In addition to their enemies, Bub and Bob encounter many exotic objects during their adventures. For instance, point-rich fruits, gems and crowns are theirs for the taking. If the dinosaurs can reach other items before they fade from the screen, they can activate bombs, fire rings and other powerful weapons.

Bubble Bobble's excellent graphics are a major reason for the game's addictiveness. The Taito conversion also has superior sound effects, which include a perky and hummable background tune.

The only possible problem with the program lies in its cartoonish packaging, which may give the false impression that the software is a mindless recreation suitable only for children. Although youngsters will indeed enjoy it, the game also has features that make it attractive to others. The instructions, for example, are deliberately brief, letting individuals who relish mixing thought with action develop personalized tactics.

Imprisoning the baron's cohorts in magic bubbles helps you make it through Bubble Bobble.

Bubble Bobble has it all—alluring graphics, outstanding sound, intriguing mental challenges and the option of two-person play, all wrapped up in the adventures of engaging dinosaurs. It is one of those rare games that should appeal to all types of players. *(Taito Software, Inc., 267 West Esplanade, North Vancouver, British Columbia, Canada, V7M 1A5. C-64/$34.95.)*

REPORT CARD

A Superb!
An exceptional program that outshines all others.

B Good.
One of the better programs available in its category. A worthy addition to your software library.

C Average.
Lives up to its billing. No major hassles or disappointments here.

D Poor.
This program has some problems. There are better on the market.

E Failure.
Many problems; should be deep-sixed!

PRO TUTOR ACCOUNTING .. A

Master the Basics
Of Accounting

When career-minded professionals and small-business owners seek to increase their knowledge of accounting, but don't have the time to attend traditional classes, what better way to learn than in front of their Commodore computers?

Pro Tutor Accounting is an excellent introduction to basic accounting and bookkeeping. The program consists of two parts: a set of modules that give samples of accounting entries, followed by "hands on" practice problems, and a manual containing 19 accounting concepts that cover more or less the same ground as a normal accounting course.

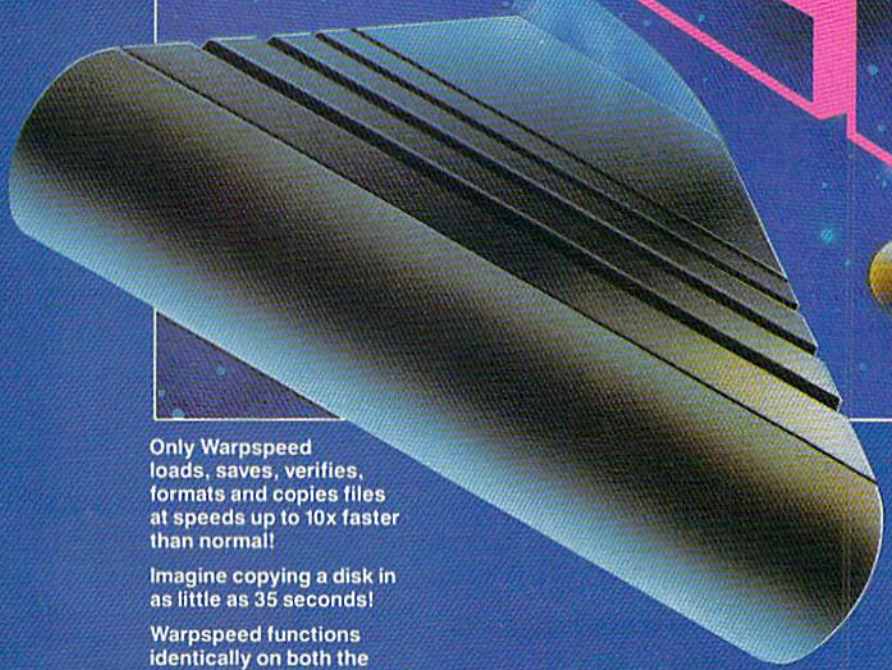

Two types of assistance are given toward solving the practice problems: a help key for cursor and procedure instructions, and a Tutorial option for general information on problem solving. If your answer is incorrect, another chance is given. If the answer is wrong a second time, the program displays it correctly, and gives you the option to try a similar problem. The session is analyzed after a series of problems are answered.

A typical journal-entry problem displays the chart of accounts and gives a transaction. The bottom of the screen has a blank journal form where you enter the date, choose an account for the debit and one for the credit.

The bank-reconciliation problems let you work on outstanding checks and deposits or unrecorded bank memos. A worksheet similar to the one ►

INTRODUCING THE INDISPENSABLE ACCELERATOR CARTRIDGE FOR YOUR C64 OR C128.

WARP SPEED™

Only Warpspeed loads, saves, verifies, formats and copies files at speeds up to 10x faster than normal!

Imagine copying a disk in as little as 35 seconds!

Warpspeed functions identically on both the C64 and C128 in the 40 or 80 column mode and works with all compatible drives, including the 1581. Built in mode select and reset switches too!

Attention advanced users: An integrated sector editor and drive monitor and a full featured mini-assembler are all included!

Only Warpspeed delivers 55 features that no other cartridge can match.

Why limp along on impulse power when you can jump to Warpspeed?

CINEMAWARE
CORPORATION

Exclusively distributed by Cinemaware Corporation 4165 Thousand Oaks Blvd., Westlake Village, Ca. 91362

C64, C128 and 1581 drive are trademarks of Commodore Electronics, Ltd. Warpspeed is a trademark of Alien Technology Group.

on the back of an ordinary bank statement is displayed, and your objective is to categorize each item as either an outstanding check or deposit. Each group of checks and deposits is then subtracted or added to the book and bank balances.

The trial balance uses a simple approach to what can often be a difficult subject for a new learner. The program asks that each account be listed as either a debit or credit with the remaining entry going to the capital account.

The final selection gives you a choice of learning to adjust entries in either a journal or T-account style. Depreciation, prepaid expenses and accruals for revenues and expenses are explained. The emphasis here is on selecting the correct account for sample problems. It is an excellent review of account classification.

Overall, Pro Tutor Accounting is comprehensive and easy to use. I strongly recommend it. *(Professional Software, Inc., 51 Fremont St., Needham, MA 02194. C-128/$99.)*

SHELL BEACH, CA

BUBBLE GHOST ..... B+

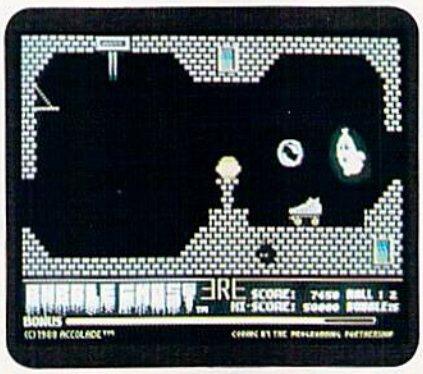

This Ghost Isn't Scary, But He Sure Is Challenging!

The object of Bubble Ghost is to blow a fragile soap bubble through an old castle. The castle has 35 rooms or halls, each containing a variety of hazards like burning candles, slashing blades, electronic force fields and electric fans. The bubble can be blown in any of eight directions by maneuvering an indestructible ghost into position behind the floating bubble and pressing the joystick button to release the ghost's "breath." The closer your ghost is to the bubble, the more the bubble moves. Blow too often or too hard, and the ghost changes from white to red while he tries to regain his breath. This slows down your progress as a bonus timer ticks away.

As you'll quickly learn, the ghost's breath must be used for more than a means of propulsion. A quick puff, for instance, is occasionally needed to extinguish candles which, if left burning, heat and burst the bubble. On other screens, the ghost must use his breath to toot horns or activate switches that eliminate obstacles in the bubble's path.

You begin the game with six bubbles, but earn a bonus bubble for every five levels you complete. While most levels have only one exit, some have secret passageways which, if discovered, let you skip entire levels. All but the final hall can be practiced individually.

Bubble Ghost can be played as a one- or two-player game, with players alternating turns. It would've been interesting to have a two-player, cooperative

Blow, blow, blow that bubble down in Accolade's Bubble Ghost!

game option in which two separately controlled ghosts combine wind power to propel a single bubble through the castle, but unfortunately, that's not a feature.

Despite Bubble Ghost's slow pace, it's not the type of game you should boot up if you're looking for a relaxing evening in front of the C-64. Watching your delicate soap bubble floating straight toward the sharp points of spikes, knives, pins and scissors while you frantically try to position the ghost to blow the bubble to safety isn't exactly an effective stress-reduction technique. However, if you thrive on challenging arcade-style games that keep you on the edge of your seat through level after level, then Bubble Ghost is one of the best new titles available. *(Accolade, Inc., 550 S. Winchester Blvd., Suite 200, San Jose, CA 95128. C-64/$29.95.)*

PLATOON ..... B+

Realistic to a Fault

The problem with most computer programs based on novels or movies is that they often bear little resemblance to the original work. The problem with Data East's Platoon is that it may resemble the original a little too closely.

While the computer version of Platoon certainly doesn't touch most of the emotional chords the movie does, it has full potential to leave you frustrated, unless you're an absolute computer-gaming wizard. As the package says, "At times, the odds may seem insurmountable. But don't think about winning—to survive is enough."

I played Platoon for about 25 hours and was unable to get past the third of the six game segments. An option that lets you begin a new game where the old one ended would be welcome.

However, what I saw of Platoon is enough to recommend it to anyone interested in action or strategy games with good graphics, accurate response and an interesting concept.

In the first segment, you must guide your platoon through the jungle in search of some explosives. Next, you have to locate a village occupied by the North Vietnamese Army. In the third phase, your men must explore a tunnel in search of a compass and two boxes of flares. Surviving long enough to reach the fourth phase places you in a bunker at night, when flares help you spot the Viet Cong guerrillas who are sneaking up on you.

If you make it through the night, you return to the jungle in search of your platoon leader, Sergeant Elias, only to find that he's been betrayed by Sergeant Barnes. Before you can react, you learn that the jungle around you is going to be napalmed in two minutes.

Escaping the jungle, however, does not guarantee your safety. Sergeant Barnes doesn't want you to survive, so he begins firing his machine gun and tossing grenades at you.

The game can end at any time in one of two ways: by taking too many hits from enemy gunfire or booby traps, or by morale falling too low and rendering your platoon inactive. Morale level and number of hits are shown at the bottom of the screen throughout the game.

Survival requires quick reflexes, good eye-hand coordination and the mapping skills of a Ferdinand Magellan. Mapping is difficult, because the game doesn't have a Pause option. You're constantly being attacked, so diverting your attention to draw or follow the map usually results in your soldier being shot.

Another complaint is that Platoon won't load with my 1571 disk drive. I tried two copies of the program, and neither loaded, although both worked fine with my 1541.

A spokesperson for Data East said

mine is the only problem they've heard of regarding 1571 loading difficulties. If that's your only drive, I suggest you find a way to test Platoon before buying it, or make sure you can return it if you run into a problem.

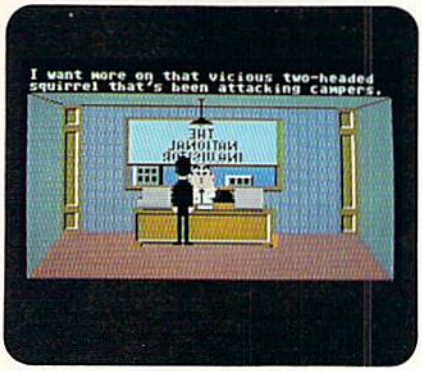

It's worth the effort, because Platoon really is a good program. It's one that you'll play again and again, because you just know you're going to make it all the way through on one of those tries! *(Data East USA, Inc., 470 Needles Drive, San Jose, CA 95112. C-64/$29.95.)*

ZAK MCKRACKEN AND THE ALIEN MINDBENDERS ..... A

A Funny, Contemporary Plot With Easy-to-Play Action

When you design a computer game, it's important to keep the basic concept plausible. Zak McKracken and the Alien Mindbenders opens with the premise that people are getting dumber and dumber.

The movie-like introduction to Zak McKracken finds our hero arguing with his boss at *The National Inquisitor*.

Although it's set in 1997, some of you might think this plot is eight years ahead of its time. Turn on the six o'clock Mindwitless News broadcast tonight for proof.

Coincidentally, that's exactly what Zak McKracken finds out when he tunes into the news in his apartment. The announcer seems to be having problems remembering what she's just said. She does say that there's a 60-cycle hum in the telephone lines and people seem to be getting dumber and repeating themselves and getting dumber and repeating themselves. Zak, however, has a more immediate worry: Why is his telephone bill $1138?

Zak is a disgruntled reporter for *The National Inquisitor*, a tabloid found at supermarket checkouts that contains stories about carnivorous cantaloupes and two-headed squirrels. "I'm tired of making up stupid stories," Zak complains to his boss in the game's introduction. "Then go make up some that aren't stupid," his editor advises.

The game closely follows the Maniac Mansion (Lucasfilm's previous release) pattern: It fills most of the screen with graphics while covering the bottom with words and phrases with which to command the characters. ►

Get Support.

It doesn't matter what kind of computer you have, there's bound to come a time when you could use a little help. Well, you can get it on CompuServe, any time, day or night. Once online, you'll find industry experts, technical reps, and thousands of other users just like you, all swapping helpful tips and information in one of CompuServe's Forums.

"I find CompuServe to be a community of users really willing to help each other. I am continually surprised when I ask a question about a program, and find that the author is there online, and helping."

— Sally Ryce, Finance Director

Browse libraries, use Forum message boards, attend online conferences, share software, and just have fun; it's all on CompuServe. Call 800 848-8199, or see your computer dealer. But, do it soon, because you never know when you may need a little help from your friends.

CompuServe®

Circle 64 on Reader Service card.

Moving Zak and his friends around couldn't be easier. Using the joystick, point to one out of a list of verbs at the bottom of the screen and then where you want Zak to go—click, and he's on his way. A sentence line appears, noting what the characters have been instructed to do. This logical way of issuing commands without typing makes the game—which covers two disks—move right along.

The first rule in playing Zak McKracken is: Take everything that's not wired down. The second rule is: If it's wired down, try to cut it loose. Zak would need pockets the size of moving vans to haul all the paraphernalia that the inventory list says he's toting, but don't worry about how he does it. Worry about how he's going to use it.

That's where *The National Inquisitor* comes in handy. There's a full-size, eight-page issue included with the game. You'll find some hints among the bizarre headlines: "Scrambled Son Tries To Kill Parents With Eggs" tells about exploding eggs in a microwave; and the "Blend-O-Rama" ad hypes a gimmick that converts a garbage disposal into a food processor.

The game has its high and low points. On the high side, it's a technical masterpiece—smooth-scrolling screens, easy-to-use commands and some good puzzles to solve.

On the low side, it uses the "find the crystals" theme employed in other adventures. Some of the puzzle solutions require more luck than logic.

All in all, Zak McKracken is a bigger—and in many ways, better—version of Maniac Mansion. Maybe the crystal-finding-expedition script is a little overworked, but then again, how many games do you know of where Groucho Marx nose glasses play an important part? *(Lucasfilm Games, PO Box 2009, San Rafael, CA 94912. C-64/$34.95.)*

MACRO SET 1 ..... B

A New Resource
For Programmers

One of the main problems with assembly language programming is that you must pay a lot of attention to detail. Simple chores like clearing the screen, displaying a message or inputting a filename that can be done with a single line of Basic often may take hundreds of machine language instructions. Don't despair! Help has arrived in the form of Macro Set 1, from Xytec Corp.

This software is *not* an assembler; it is a comprehensive library of machine language macros and subroutines. Over 4000 lines of written and debugged code are available.

You can select functions you need in your ML programs from five library files. One equates symbolic names to Kernal routines and important memory locations. It also provides two-byte register and address manipulation functions, as well as subroutines for screen and keyboard I/O. Other libraries provide sophisticated window input routines; disk I/O routines that support both fixed- and variable-length record formats; multi-byte precision decimal arithmetic, including output masks; and debugging and tracing facilities.

The macros and subroutines are powerful and easy to use. Within an hour after opening the package, I was running a short ML program that used half-a-dozen subroutines from two of the libraries. Coding the same program from scratch would have taken hours. So far, so good—now for the bad news.

Macro Set 1 is designed to run specifically with the Commodore Assembler Development System. Since I was favorably impressed with the software, I called the president of Xytec to express my concern at this limitation, and was reassured by his telling me that Xytec is working on versions for the Merlin and PAL assemblers.

If the package has a weak point, it's with the documentation. More text examples would be helpful for beginning ML programmers, and sample programs that demonstrate the package's powerful features would also be nice. The descriptions of the various functions are good, but the manual is sometimes difficult to navigate through when you're looking for a specific capability: a cross-referenced index would be useful.

If you use the Commodore Assembler Development System, Merlin or PAL, this package definitely belongs in your ML toolbox. If you own another macro assembler and are a reasonably adept ML programmer, it may still be worthwhile to obtain Macro Set 1 and put the effort into converting these well-conceived utilities to your assembler's format. With a name like Macro Set 1, can a sequel be far behind? *(Xytec, 1924 Divisadero, San Francisco, CA 94115. C-64/$29.95.)*

HERNDON, VA

ROAD RUNNER ..... C–

Maybe It's Better
On Saturday Mornings?

It's a natural, right? I mean, what cartoon lends itself more to the computer game medium than Road Runner. You have a lightning-fast bird who does all of his travelling by foot, and an inventive coyote who's determined to catch the speeding bird even if he has to send away for every contraption Acme sells.

A Seed Meter at the top of the screen indicates the Road Runner's strength.

Unfortunately, despite on-screen action and the cartoon's theme music, Road Runner's designers missed a golden opportunity to create an exceptional game. This is the type of game that may leave you counting the ways it could have been made better.

As Road Runner, your object is to evade the coyote while avoiding a variety of hazards like sand traps, falling boulders and head-on collisions with speeding trucks. If you can lure the coyote into these dangers, you're awarded 500 bonus points.

To keep up your strength as you travel through the desert, you must pick up small piles of birdseed. A Seed Meter at the top of the screen gauges the Road Runner's strength. If you collect all of the seed on one level, you receive 10,000 bonus points.

While I have no problem with any of these game elements, I do feel that there's plenty of room for improvement. For starters, Road Runner is a one-player game, and that one player must always control the bird while the coyote remains under computer control. It would've been nice to be able to have a friend maneuver the coyote around the scrolling desert landscape, or at least to have the option of switching characters yourself.

Another complaint I have is the Road Runner's lack of much of his famous speed and agility. When travelling over the narrow, maze-like roadways of level 2, for instance, the bird has an uncharacteristically difficult time maneuvering around corners, and he easily becomes stuck, while the coyote easily zips all over the screen.

The straw that broke the coyote's back for me was the absence of a particular sound effect. Not once throughout the entire game did I hear a "Beep Beep!" This game cries out for an authentic, digitized "Beep Beep" taken right from the cartoon's soundtrack. Even a little tweaking around with the C-64's SID chip could've produced an acceptable "Beep Beep." Instead, you must repeatedly listen to that familiar Warner Brothers theme which, after a few minutes, has you reaching for your monitor's volume control. *(Mindscape, Inc., 3444 Dundee Rd., Northbrook, IL 60062. C-64/$34.95.)*

—BOB GUERRA
SOUTH BOSTON, MA

COSMIC RELIEF C

Another Search-and-Rescue Mission

Thirty days. That's all the time you have to locate the world-famous inventor, Professor K. K. Renegade. Renegade's prediction that an asteroid would collide with the earth was ignored until the approaching asteroid was sighted. Now, with time running out, Renegade must be found and persuaded to build an asteroid deflector to save the planet.

You begin your search for the inventor by choosing one of five internationally known explorers as your on-screen adventurer. You must then guide him through a scrolling obstacle course consisting of a desert, cloud-filled sky and underground passageways. Along the way, you'll face many dangers, such as acid rain, snakes and pterodactyls.

During your travels, you'll also find several unusual items, some of which are needed to help you reach the professor. If you're not sure which item is called for in a particular situation, you can ask your adventurer for a suggestion by pressing "T" for Think.

Each adventurer has his own secret item that must be found before the world can be saved. Cheat notes listing all 24 and their uses are included on a map of the playing area.

An information window below the main screen shows three native bearers and the items they are carrying, the time remaining to complete your search, your score and the number of lives left.

Cosmic Relief has no major flaws, but, at the same time, the game has no features that distinguish it from countless other obstacle and search games. The graphics are colorful, but nothing extraordinary, and the sound is standard arcade fare. The manual is slightly amusing in sections, but on the whole, Cosmic Relief is an unspectacular action/adventure game ►

Everyday People on CompuServe

Communicate.

When it comes to getting your message through, nothing delivers like EasyPlex,® CompuServe's electronic mail service. Businesses, families, and friends can communicate across the country, and around the world. Through EasyPlex, members can also communicate with MCI Mail® and Telex® users, as well as send fax messages directly from their computers.

"I bought my son in New York a CompuServe package and modem, and we often keep in touch that way. It's nice to be able to send messages or share files when we need to."

Editor's Note: To give our readers more coverage of the many C-64/128 software products available, RUN *is broadening the scope of Software Gallery by presenting more reviews in capsule form.*

STAR RANK BOXING II .. B+

The sequel to the original Star Rank Boxing is a knockout. Besides sparring, it gives you the opportunity to play trainer and promoter.

A breeze to learn, SRB II is completely menu-driven except for the fighting. Joystick response is quick and accurate, and it's easy to master the available techniques. The animation and fight graphics are first rate, although the menu screens are nothing to brag about. Sound effects are also good.

My complaints are that fighters can only move forward or backward, and that long pauses occur whenever the computer accesses the disk.

Star Rank Boxing II has its minor flaws, but like a true champion, it still packs quite a wallop. *(Mediagenic, 3885 Bohannon Drive, Menlo Park, CA 94025. C-64/$29.95.)*

—SCOTT WASSER

MIGHT AND MAGIC'S BOOK ONE: SECRET OF THE INNER SANCTUM ... A–

Combine the premise of demons, dragons and other lurking monsters with single-key controls, 3-D perspective, forward view and easily managed non-tactical combat. The result is Might and Magic: a game you can "get into" with barely a glance at the manual.

The software isn't going to bowl anyone over with format innovations or special effects. It can, however, stagger you with sheer size. This is one "swords and sorcery" undertaking that takes map devotees seriously.

Might and Magic features nearly 100 cleverly contrived sorcerer and clerical spells, countless nifty magical implements, good weapons variety and a solid emphasis on character development. If you wanted a long-playing, believable adventuring challenge—it has arrived! *(New World Computing; distributed by Mediagenic, 3885 Bohannon Drive, Menlo Park, CA 94025. C-64/$39.95.)*

—JEFF HURLBURT

CLUB BACKGAMMON .... B+

It's been said that the way to judge a computer adaptation of a traditional board game is by how the computer's special attributes are used to enhance the game. Club Backgammon is enhanced by a point-and-click player interface that lets you use your joystick to move markers around the board and by a variety of options accessible through pull-down menus.

Club Backgammon can be played against the computer or a friend, or the computer can play against itself. Other options let you pick the board and marker colors, slow the speed or bypass the computerized dice to enter rolls from real dice.

Games in progress can be saved to disk and, as you play, a log of all moves is kept in computer memory. New players will find useful an evaluation feature, which can be selected at any time to help decide an upcoming move.

The program isn't copy-protected, but you're required to enter a letter from a specific part of the manual before starting to play.

If you've always wanted to know how to play backgammon but thought it was too complicated or boring, Club Backgammon will change your mind. It's a surprisingly entertaining version of a game that's been around for a long time. *(California Dreams, 780 Montague Expressway, #403, San Jose, CA 95131. C-64/$29.95.)*

—BOB GUERRA

SINBAD AND THE THRONE OF THE FALCON ..... B+

Borrowing freely from numerous motion picture storylines, this software employs detailed, full-screen graphics, animation and music to create a convincing Arabian Nights backdrop. Here, earthquake magic is as deadly as the sword, a cyclops gobbles unwary adventurers, and the Black Prince's minions roam the earth and sail the skies in search of any who would oppose their master's evil design.

Sinbad presents a myriad of challenges. Your quest to free the caliph from ensorcellment involves both action, and, in the best Arabian Night's tradition, solution of a mystery.

The requisite deadly encounters with evil magic, perilous waters, enemy swordsmen and monsters are supplied via several arcade sequences. Inserted more or less at random throughout your travels, these contests are entertaining and offer good variety, but each is also a potential game-ender and far too difficult for quick mastery. With no Practice option, you should count on playing through many unwinnable "try-out games."

Sinbad and the Throne of the Falcon can make you very proud of your C-64—the graphics are beautiful—and yet have you pulling your hair out in frustration. No two games are the same, and it's easy to try new scenarios. If you can stomach the unfortunate arcade apprenticeship requirement, look forward to a magical adventuring experience. *(Cinemaware Corp., 4165 Thousand Oaks Blvd., Westlake Village, CA 91362. C-64/$34.95.)*

—JEFF HURLBURT

NAVCOM6 C

NavCom6 is a naval combat simulator that places you in full control of an Aegis guided-missile cruiser stationed in the Persian Gulf. You orchestrate its offensive and defensive moves through use of a massive control panel.

The program's graphics are generally crisp and detailed. Some of the sprite graphics are blocky and tend to wrap, but that's merely a distraction.

I am, however, becoming weary of trying to decipher Cosmi's documentation. Written as though for seasoned naval personnel rather than the computing public, it's cryptic and frustrating. Activating the various shipboard systems is a real trial because alphanumeric codes must be looked up and typed in.

NavCom6 is well done and methodically researched from bow to stern, but the ambiguous documentation and awkward player interface make it too much work to really enjoy. *(Cosmi, 415 North Figueroa St., Wilmington, CA 90744. C-64/$24.95.)*

—JOHN RYAN

SCRUPLES C

Scruples is classified as a conversation/strategy game, a "social game of moral dilemmas." Given questions dealing with a wide range of social issues, you attempt to answer according to what you think is the response

that best fits your personality.

In many instances, the two don't match up, which is half the fun. . .and frustration. The object is to be the first player to discard all of his or her dilemma cards.

Scruples' sound and graphics are fairly basic, yet effective. Game play tends to be very fast until you get used to it. It often gets confusing as to who is doing what, asking whom and answering whom.

While Scruples certainly follows the conventions of the original, it also suffers from a problem common to most board-to-computer game conversions: lack of atmosphere. Part of the fun of playing Scruples is the ability to interact with the people around you. Even though eight others can play the C-64 version, I can't picture nine people in front of a computer, passing a joystick around. Perhaps it would be better to save the computer Scruples for those lonely rainy days.

Scruples certainly means well and tries hard to bring its particular brand of magic to the screen—but the magic is just not there. *(Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404. C-64/$39.95.)*

—JOHN RYAN

MASTER NINJA ..... D

Master Ninja has some features that favorably set it apart from similar programs of the oriental combat-game genre, but other elements will alienate a lot of fans.

Although ambitious in scope, the software's problems start with its documentation. The three sources of information—an instruction manual, a reference card and a help screen—do not all contain the same facts.

The program's control system can cause games to end very quickly. The necessity of waiting three minutes to reach the first combat screen, even with a fast loader present, is another problem. And because the program indicates only between battles how much damage the ninja has suffered, a player often has little idea of how close he or she is to losing. I also felt that the game is mean-spirited in its comments about defeated players. Words such as "disgraceful" and "disgusting" are used to describe their performance.

Master Ninja is not totally without merit, however. Although its on-screen combatants are little more than electronic stick figures, the background graphics are often splendid. The sound effects are also good, and the publishers should take credit for trying to make its martial arts action more interesting by placing it in the context of a fully developed story.

Yet, the program's positive features are ultimately outweighed by its drawbacks. Although Master Ninja is significantly different from other martial arts games, different does not, in this case, mean better. *(Paragon Software; distributed by Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404. C-64/$29.95.)*

Trigger-Happy

All about the input devices that can make your Commodore jump, run, dodge, shoot, fly and respond to your every wish.

Kraft Systems' Ace, Starmaster and Mazemaster joysticks.

Ready! Aim! Fire! Sounds of artillery whiz from your monitor, accompanied by a deafening click. Many computer applications require non-keyboard input from the user, and numerous devices have been invented for the purpose. They include joysticks, mice, light pens and even voice-activated gadgets. Your C-64 or C-128 is remarkable in accepting a wide range of these devices without needing additional hardware, and, because the Commodore's built-in joystick ports are easily programmed, there's an abundance of software available for many Commodore-compatible input devices.

However, these input devices may or may not come equipped with software. Joysticks do not, as a rule, because there's a seemingly endless variety of both commercial and public domain programs available for them. Furthermore, the joystick you use with your 8-bit Commodore will also work with an Amiga or Atari, but software would not be compatible with all three machines. Light pens and mice generally do come with software, because few commercial packages are available for use with them, and they are not adaptable to other computers.

Now let's look at a number of the input devices available for ►

By TIM WALSH

PHOTOGRAPHED BY LARRY DUNN

Commodore computers today. You'll find distributor and price information in Table 1.

Joysticks

Joysticks for Commodores date back to the heyday of the VIC-20. Since that time, the two most notable advancements in their design have been remote (wireless) control and micro-switch operation. Wireless joysticks never caught on, but micro switches have become the de facto standard, thus providing improved sensitivity and responsiveness.

The **Starmaster** joystick from Kraft Systems, one of the foremost third-party joystick manufacturers, offers a number of worthy features. Four suction pads on the bottom of the unit allow one-handed use, as long as you have a handy flat surface on which to mount it, and the two fire-buttons, one on the base and the other on top of the control stick, provide a choice of shooting styles. In addition, the positive clicking action in the control stick's movement makes the unit responsive and accurate, and the clicking action in the fire-buttons lets you know your finger press has actually registered. On the negative side, Starmaster's large pistol grip is more conducive to brute strength than the speed and sensitivity required by most joystick games.

I would heartily recommend another Kraft joystick, the unresponsive and cumbersome **Ace**, to any opponent whose skills at a game were better than mine. The stubby control stick offers no clicking or other feedback, and the obtrusive fire-button is mounted on the top-left side of the base, a cumbersome arrangement at best for left-handed users. Furthermore, the four tiny pads on the bottom of the unit provide little adhesion to desktop surfaces. At least, the fire-button does click nicely, just like the one on the Ace's well-designed big brother, the Starmaster.

After reading about the Ace, you may be surprised to learn that one of my all-time favorite joysticks is also a Kraft—the **Mazemaster**. I've hit nearly all my high scores with this gem. It's accurate, provides feedback, and, most important, is delightfully small—a near-perfect fit for my average-size hands. I can control it with just my fingertips, and its light weight makes for hours of tireless play.

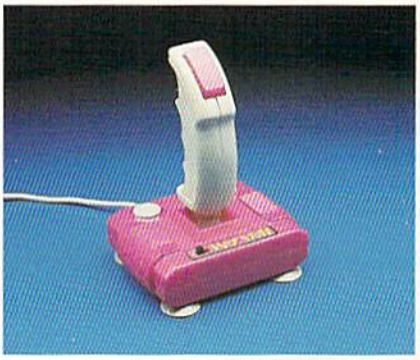

Many joysticks are cumbersome for left-handers to use.

Other pleasing features of the Mazemaster include an 8-foot cord and a switch on the underside of the base that selects four-way horizontal and vertical movement or eight-way movement that includes diagonal directions. The single fire-button on the upper-left corner of the base is awkward for southpaws, though, and the Mazemaster won't stick to a desk, so it must be used with two hands. It also lacks the positive clicking action characteristic of other premium joysticks. In spite of these drawbacks, the Mazemaster's precision and responsiveness make it the joystick I nearly always reach for in my daily work.

No fewer than four fire-buttons are found on the big, colorful **Hot Stuff** joystick from Beeshu. The base has two, and the large gray pistol grip has two more. The base also sports an autofire switch that's handy for repeated firing. Note, however, that in Autofire mode, some software gives the fire-button priority over the control stick, so you can't control the other joystick movements while firing. Oddly, the fire-buttons on the base of the Hot Stuff click nicely when pressed, but those on the pistol grip don't click at all. Four suction pads on the base provide a tenacious grip on any desk surface, and the pistol-grip fire-buttons make this unit suitable for right- and left-handed gamers alike. Overall, this is a decent joystick, offering the autofire switch as an unusual touch.

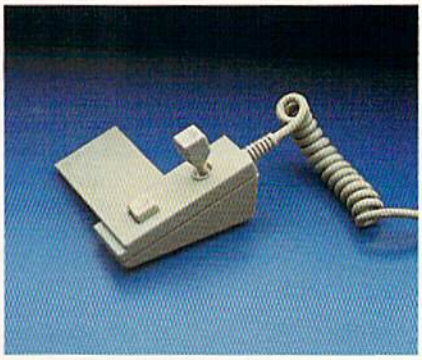

If you're the type of computerist who wants all the latest gimmicks, the **Freedom Stick** by Camerica might be your choice. This big, battery-operated device communicates with the computer not through a cable, but by infrared signals, which means you can sit ten or more feet from your computer and still control the on-screen action. The installation instructions for this joystick are rather confusing, but they boil down to loading in four AA batteries (not included), inserting the unit's two joystick plugs into the ports on your computer and plugging the opposite ends into the infrared receiver. You activate the joystick by flipping the three-position Player switch, which also lets two Freedom Sticks be used concurrently.

The Hot Stuff joystick, from Beeshu, Inc.

Camerica Ltd.'s Freedom Stick.

Suncom's IconTroller.

Many joysticks are cumbersome for left-handers to use, but the Freedom Stick is awkward for right-handed users. The control stick is mounted on the top-left side of the base, while the fire-button is on the right, so you must either cross your hands or learn to operate the control stick with your left hand and the fire-button with your right. Left-handers, of course, feel right at home with the Freedom Stick. Also, when holding the Freedom Stick in your lap, not only will you have to lower the infrared receiver to a comparable level, but you must also limit your body English during spirited play. Overall, I'm impressed with the Freedom Stick's infrared technology, but disappointed with the functional aspects of the unit.

The **IconTroller** joystick from Suncom is unusual in that you can stick it by an adhesive pad onto the side of the computer, next to the joystick ports. It then connects to either port with a coiled wire. The unit's light-beige color nicely matches the C-128 and C-64C cases, and it's probably the smallest joystick on the market. It also provides acceptable control and accuracy, but unfortunately is awkward to use.

In fact, design flaws make the Suncom more a novelty than a serious joystick. If you're right-handed, the control stick is mounted so your thumb and index finger can move it comfortably, but your palm is left covering the fire-button. You can use it more easily by holding it with two hands instead of attaching it to the computer. Especially if you're left-handed, you'll have great difficulty using it effectively when it's mounted on the keyboard. Also note that this product is designed for mounting on the older, flat C-128s, not the C-128D with its detachable keyboard.

The good news here is that the Suncom provides a second joystick port on its jack. Thus, you can plug the Suncom into the computer and then plug a "real" joystick into the Suncom. In summary, this joystick was a good idea, but it left the drawing board too soon.

Hear the name Mindscape, and you think of high-quality entertainment software, so it should come as no surprise that they sell a high-quality joystick to complement the software. Billed as the "ultimate high-tech joystick," the **PowerPlayers** features a comfortably contoured pistol grip, with a built-in fire-button and a control stick mounted on top—somewhat like a handgun without a barrel. Because of the pistol grip and built-in fire-button, this is one of the few joysticks that can be used equally well by left- and right-handers.

Quality-wise, you'd be hard pressed to find fault with the Ergostick.

Besides comfort, the PowerPlayers offers precision, with positive clicking in both the control stick and fire-button, and an overall high-quality feel. Also, its long cable lets you move as far from the screen as you wish. The only disadvantage is that it must be operated with two hands. The PowerPlayers would probably be my favorite joystick except for one problem: The *RUN* editorial office possesses only one, and someone else usually has it.

Everything about another one of my favorite joysticks, WICO's **Ergostick**, looks good at a glance. It's the only joystick in this roundup that's covered with a porous material, providing for a good grip. It's also the only joystick I reviewed that has a base contoured to fit most normal-size hands. Also, thanks to the miracle of micro switches, it offers perfect response and sensitivity.

Left handers might have a tough time using it, however. It's designed to be held in the palm of your left hand and controlled with the fingers of your right. Southpaws who must reverse this arrangement will find their hands in an awkward position.

Quality-wise, you'd be hard pressed to find fault with the Ergostick. A long cord and all-around precision make it an easy device to like. Most of all, the rubbery material that covers the unit gives it a distinctive feel that's unlike any other joystick I've used. I find it to be one of my favorites.

The Proportional Mouse

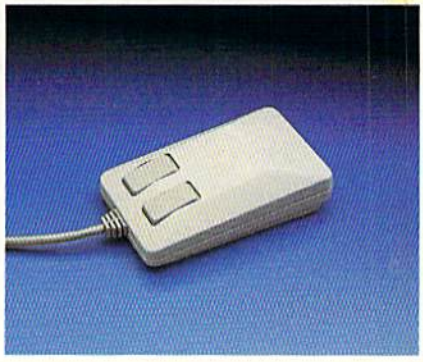

The first mouse for the Commodore, the 1350, was really just a joystick in a different guise. Newer proportional mice, which are slowly but steadily gaining acceptance in the Commodore community, register motion in any direction and translate it to the computer. The mouse's input comes from a ball that protrudes beneath the ►

The PowerPlayers joystick, from Mindscape.

The Ergostick, from WICO.

Commodore's 1351 Mouse.

unit and rolls on the desk surface. The mouse plugs into the joystick port and typically has two buttons on the top for "clicking" icons, drawing and positioning the cursor. The mouse goes further than any other input device to enhance the computing experience for novice and seasoned pro alike.

Like other input devices, the proportional mouse requires software written specifically for it. Programs such as GEOS and Basic 8 already depend almost completely on the mouse, and there's an ever-expanding number of mouse-driven utilities available. However, most entertainment software still calls for a joystick, which is unfortunate, because the mouse is much more accurate and easy to use. Mouse fanatics like myself are pleased that Arkanoid, the C-64 breakout-type game from Taito, is supporting the mouse.

Two mice are currently available for use with Commodore computers. The **Commodore 1351** has been on the market for a number of years and has enjoyed a lot of commercial success. I've used a number of 1351s for over a year and have found them comfortable, responsive and reliable. The 1351 is also versatile, offering both Mouse and Joystick modes, the latter activated by holding down the right button while powering up the computer.

The 1351's long cable lets you work a considerable distance from your computer, and the buttons click with audible authority when you press them. As a bonus, the mouse comes with a disk of utilities and drivers that you can use in writing your own mouse-operated programs. Thanks to the popularity of software such as GEOS, Basic 8 and public domain programs, the 1351 is becoming a fixture, like a monitor or disk drive, with most Commodore 8-bit computerists. It's also about as flawless an input device as you're likely to find.

While Commodore dominates the mouse market with the 1351, the **M3 Mouse** from Contriver Technology is a worthy alternative. It differs in form from the 1351, but functions in much the same way and also offers both Mouse and Joystick modes, selected during power-up. Unlike the 1351, it comes with C-64 graphics software, so you don't have to buy separate programs right away. This software includes a program that's somewhat like GEOS, although nowhere nearly as sophisticated. The M3 also works well with all software that's compatible with the 1351.

Virtually any type of program could use light-pen input.

On the negative side, the M3's buttons lack the level of responsiveness found in the spring-loaded clicking action of the 1351. They click at the end of their travel, unlike the 1351's buttons, which click about halfway down. As a result, the M3 requires a little more fingertip pressure to activate program functions. In general, though, the M3 is a viable alternative to the 1351 if you're looking for a good mouse at a fair price.

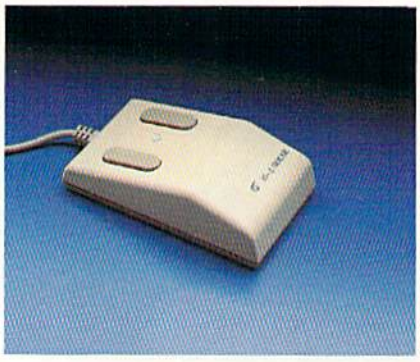

The Light Pen

Light pens differ from other input devices in that their functioning is more complex than that of a joystick or a mouse. Whenever it's working, the computer is generating an electron-beam that scans the entire screen 60 times per second. Because this process occurs faster than the human eye can detect, the display looks like a steady image, but the light pen knows differently.

When you activate the light pen with input from the screen, the pen's photo detector sees a burst of light each time the scanning beam passes. When its button is pressed, the pen converts these flashes to electrical pulses that go to the computer, where the pulse timing is converted to the instantaneous monitor beam position. The computer can then use this information to plot a point, position its cursor, identify a target or perform any number of functions.

Virtually any type of program could use light-pen input, but because of a lack of interest by both manufacturers and users, few programs provide light pen support. As a result, the selection of Commodore-compatible light pens has dwindled to only two, both from Inkwell Systems.

There's no doubt in my mind that the Inkwell Systems light pen survived its competitors simply because it worked much better. There are two models of Inkwell light pens—the 170-C and the 184-C, the latter being the most recent version. The primary difference between them is that the 170-C has a spring-loaded tip that must be phys-

The M3 Mouse, from Contriver Technology.

The 170-C and 184-C light pens, from Inkwell Systems.

Access Software's LipStick Plus.

ically pressed against the screen when drawing, whereas the 184-C uses two buttons that activate the device without coming in contact with the screen. Both have a long (5-foot) cable that plugs into a joystick port, and both are lightweight, which makes it easy to hold them to the screen for extended periods of time.

Disk-based software and a comprehensive 19-page users guide accompany both models. The documentation is helpful and complete, and the C-64 mode software includes a menu that demonstrates the pen as an input device for a sound synthesizer, piano, memory game and screen-location program. Furthermore, the programs are written in Basic, allowing for easy examination by those who want to learn the art of programming light pens.

By gently pressing on either of the 184-C's buttons while aiming the pen at a light-pen-compatible program running on the monitor, a signal is sent to the computer. That signal, in turn, is used to trigger an action or reaction, just like a joystick or mouse. The process is similar on the 170-C, except that the spring-loaded tip is pressed against, rather than merely aimed at, the screen.

The light pen readily lends itself to Flexidraw, a popular graphics program also offered by Inkwell Systems. Artists who traditionally use either pen or brush might not feel comfortable using a mouse for drawing, but they're more likely to feel right at home drawing on the screen using these light pens. Both models work well enough that even non-artist types can enjoy and benefit from using them.

Voice Input for Gamers

Originally packaged with Access Software's Echelon game, the **LipStik Plus** is a headset and mouthpiece that serves as a fire-button for use with a joystick. A connector runs from the mouthpiece to either joystick port, and the joystick plugs into the connector.

I don't consider the LipStik particularly beneficial, since it serves a limited purpose and is uncomfortably tight to wear—not to mention the fact that most folks look pretty silly wearing a headset and yelling "Fire! Fire! Fire!" As Lou Wallace discovered when reviewing Echelon for *RUN*, an office setting is not a good LipStik Plus testing ground if you want to preserve your dignity. It's best used in a situation where no one can observe you.

Tim's Wish List

I've used a variety of input devices on Commodores, and, frankly, the proportional mouse remains my favorite. I would like to see it more widely accepted in the Commodore community, where it could help extend the life of the C-64 and C-128 and make the computing environment more user-friendly, especially for beginners. Software manufacturers have expressed a willingness to create more mouse-supported programs, so we users just need to let them know we want more. Meanwhile, the joystick remains the input device required by most entertainment software, and some excellent joysticks are available at reasonable prices. I don't see much improvement needed there.

I would like to see some brand-new input devices for the Commodore market. With both the size of the market and its demand for good-quality, innovative products, manufacturers willing to offer new products would probably be rewarded. Let's see what 1989 brings! ■

Tim Walsh, RUN's technical editor, spent hours preparing this article. He hopes readers will believe that it wasn't all just fun and games.

Computerized News: Television Takes the Plunge

By JAN GEORGE FRAJKOR

It has always struck me as ironic that television, an electronic medium, has been one of the last media to go all electronic.

When I worked as a television reporter over a dozen years ago, I had occasion to research the use of computers in the writing, layout and production of newspapers and magazines—and then I went back to the newsroom and pounded out my voice-over script on a manual typewriter!

And where did we first see the powerful graphics capabilities of small computers employed? You guessed it—desktop publishing.

There are several reasons why computerization is overtaking television newsrooms so late in the game, but the main one—expense—can now be overcome.

A Low-Cost Alternative

Here at the Carleton University School of Journalism, we don't have the kind of money major commercial newsrooms spend on powerful integrated computer systems such as Newstar, Basys and R-News. But we know we can't teach modern television journalism without giving students a chance to work with some form of computer system. That's why we equipped our television newsroom with a mini-network of eight C-64s, three disk drives, two printers and software—all for less than $12,000 Canadian (about $9000 U.S.).

We determined early on that we couldn't have everything, so we decided we'd install at least a word processing and printing system, a database to keep track of news sources and stories, a graphics program and, if possible, a terminal program for remote access.

Since we report, videotape and write all our own stories, we don't need a system to accept and edit wire-service news. And since we were already using a 40-character line for writing our news scripts, the 40-character screen of the C-64 is no disadvantage. It is, in fact, an advantage. We've found that a person can read four lines in ten seconds, so we can count the lines on the screen to get a good idea of how long the script is.

We knew the system had to be simple, because there are always some students who have absolutely no knowledge of computers. The system had to help them learn television journalism, not get in their way. We settled on a Microshare time-sharing network server, which cost $1000 and was our single most expensive piece of equipment. We bought the entire system from Comspec Communications, Inc., of Toronto, rather than shopping for parts, because we thought it best to deal with one supplier. It was a good decision.

The Hardware

The eight C-64s plug into the Microshare with cables from their serial ports, in what amounts to a star-type network, with everything radiating from the Microshare. It continuously polls the computers, checking to see which one needs service, whether it's loading something from a drive, saving to another drive or seeking to print.

The Microshare plugs into three drives—two SFD-1001s (1.2 megabytes each) for storing written news and data and an MSD2 dual drive (354K) for programs and administration. The Microshare addresses the drives through an IEEE-488 port, as on the older PETs, so it's much faster than using Commodore 1541s.

The Microshare also connects to a 64K printer buffer, made by Comspec, which in turn connects via a Centronics port to one Epson FX-85 printer. Our technical shop rigged up a switch to connect one more printer to one of the Commodores through an old Cardco/?A interface.

Our monitors are Goldstar 13-inch monochrome television sets, with monitor switches at the back for direct audio-video feed. They cost about $80 each and have amazingly good displays.

How the System Works

A student who's been out shooting a television story comes back to the newsroom, loads a word processor into her C-64 from one of the drives and then loads in a sample story. The sample contains examples of all the production directions the story will need to get on the air—things such as videotape cues in and cues out, along with instructions on when to put up captions, superimpose text on the screen or put up graphics.

The student simply overwrites the sample story with her own information, erases what needs to be erased and changes whatever needs to be changed. It's almost like filling in blanks.

The student then makes one test print on cheap newsprint just to give the desk editors something to look at and to make sure the format is correct. If all is well, the student saves the story to the SFD drives and leaves to edit the videotape, record the voice-over and have graphics made up.

Meanwhile, the desk editors load a sample "runsheet" into a C-64 and start entering the slugs (names) of the stories into it. A runsheet is a capsule summary of all the information the desk, studio and control room need, including the names of the stories, the lengths of the leads, whether they are videotaped stories or plain scripts with graphics, and anything else that might affect production.

The lineup editors can change the order of the stories in the newscast by erasing the paragraph on the runsheet containing the information about that story, moving the cursor up or down, and reinserting the story at a new location.

Around deadline time, which is 4:30 PM for a 6 PM newscast, the lineup editors print out six copies of the runsheet, us-

Computers are finally taking hold in television newsrooms, and Ottawa's Carleton University is prepared.

ing two printers with three-copy carbonless paper in each one. They then load the individual news scripts into one of the C-64s, in the order in which the run-sheet dictates. This becomes one long file, called News/(year)/(month)/(day), almost filling the internal memory of a C-64, but so far we haven't had any crashes, and we can always break the file in two if necessary.

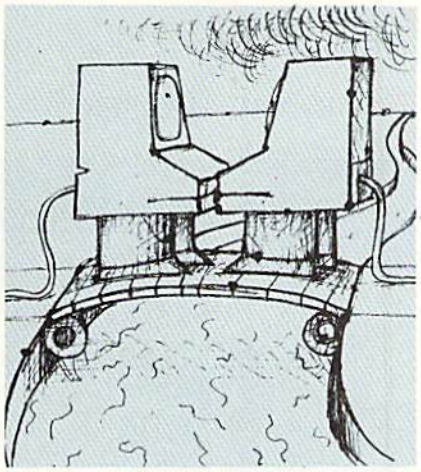

The newscast file is sent to two printers, so we get six copies of a 25- or 30-page newscast in about seven minutes. We print one set in Near-Letter Quality mode for the news and sports readers and the director, and one set for the audio, video and studio crews at the full draft-quality speed of 160 characters per second. The printer buffer has a pause button so we can stop printing to clear paper jams or mechanical problems, and it has a copy button so we can reprint everything in its memory.

The source file, which we are just beginning to build up, is a database containing the names, telephone numbers, addresses, job titles and other important particulars of the people with whom we deal regularly. In our case, this includes the heads of academic departments, sports coaches and stars, campus union leaders and the contact people for important campus organizations.

Students are encouraged to get all the source file information, but they aren't allowed to enter it into the database themselves. Only teaching assistants and instructors can do that, lest an accident destroy the file.

Using the C-64

We're just starting to generate simple graphs and charts with the C-64s. Since the C-64s can't "genlock," meaning we can't plug it into an on-air show or use it directly as a text or graphics generator, we're fiddling with the output so that we can videotape it directly and then edit the tape segments into our stories. The

fiddling is necessary because, while the video output of a C-64 is supposed to be standard NTSC composite video, this isn't quite the case. The signals are off just enough to make this a risky operation, but working with the programs gives students a taste of the electronic generation of graphics and gets them to think about using graphics as an integral part of their stories.

We'd prefer a more professional-quality system, but I don't think you can surpass the C-64 for cost-effectiveness. Cinequip, a professional video supplier in Toronto, has even written a teleprompter program for the Commodore so that news and sports readers can see their texts directly on a video screen in front of the cameras. This isn't for amateur use—it's intended to be used by commercial stations—but we'll probably go for it in the long run.

Nagging Problems

We've had no real problems with the Microshare or its buffer. The C-64s also have been reliable. The old problem of power supplies overheating crops up occasionally, but it's much better now that Commodore is using 8.5-watt supplies made in Taiwan instead of the 7.5-watt ones from Singapore.

The MSD2 drive is a workhorse. We needed it because most software comes on 1541-type disks, and we can transfer them easily to the SFD-1001s because the MSD has an IEEE port as well as a serial port. MSD is no longer making Commodore drives, but the people there have been very cooperative with advice and support and will sell you technical specs and manuals if you want your own technicians to fix the drives.

The Epson printers are reliable and fast, but the paper handling is a nuisance. I wouldn't put up with it if it weren't for Epson's support and the printers' other virtues.

The one real problem spot is the SFD-1001 drives. One was flaky when we bought it: It never passed its own self-tests—or passed them seemingly at random. It finally stopped working completely. We accidentally destroyed the other drive, but it wasn't working well at the time anyway. To be fair, they're working quite reliably now, and Compspec has been generously supportive.

Commodore, however, has washed its hands of these machines, so Commodore dealers won't fix them and Commodore itself won't honor any guarantee. Only Progressive Peripherals of America has specs and manuals for the drives, and it refuses to sell them to anyone. Progressive Peripherals will repair the drives if you ship them to Denver, Colorado. But let's face it, when I have a deadline in Ottawa, Canada, it's not much comfort knowing that repairs are available only in Denver.

In retrospect, we probably should have snatched up some of the Commodore 8250s or 8050s while they were available. They're also out of production, but Commodore still stands by them and fixes them.

We have been very pleased with our little newsroom network, and the C-64s have been a reliable, versatile part of the system. ■

Jan George Frajkor teaches television journalism at Carleton University in Ottawa, Ontario.

ILLUSTRATED BY MACIEK ALBRECHT

Address, Please?

Use a mouse or a joystick to access this handy point-and-click address book.

By NEIL HANSEN

Address Book 128 is an easy-to-use, graphics-oriented program that's operated with a joystick or a 1351 mouse, so there's no need to learn and type in commands. Just move the pointer on the screen with the mouse or joystick and press the button to activate the program functions. Names and addresses are kept in alphabetical order, with room for up to 100 names under each letter of the alphabet, and the entries can be printed out on envelope labels.

Start by typing in the program in Listing 1, which contains sprite data that Address Book 128 needs. Then save it to a blank disk and run it. Next, type in the main program (Listing 2) and save it to disk.

Program Functions

When you run Address Book 128, it first asks for your mode of input. Press 1 for a joystick and 2 for the 1351 mouse. After you make your selection, the screen goes blank for six seconds while the program is being set up. Note that the program takes full advantage of the mouse's Proportional mode.

The next display features a large rectangle on the left and a narrow rectangle on the right that contains the letters of the alphabet. Within the big rectangle, you see the following categories: Last Name, First, Middle, Address, State, Zip, Miscellaneous and Phone. At the bottom, there's an imitation page-fold and four boxes with the words Quit, Delete, Print and Save in them. The pointer rests in the center of the big rectangle, and the letter A appears in the upper-left corner, indicating that you're in the file for names beginning with A.

To enter the file for a different initial letter, move the pointer to the alphabet rectangle, place it on the letter you want to load and press the button. The new letter replaces the A in the upper-left corner of the big rectangle, showing the file you are currently in.

When you want to enter information on a person, move the pointer to Last Name and start typing. When you're finished, press return.

You can flip through your address book by moving the pointer to the lower-left corner of the screen, where there's a small square divided into two triangles by a diagonal, making it appear as though the corner of the page had been folded up. To flip to the next card, move the pointer to the upper-right triangle and press the button; to flip backward, point on the lower-left triangle and press the button.

You can delete outdated cards by moving the pointer to the box that says Delete. But watch out! Deletion is permanent; you won't be able to get your card back.

To print out a card as an address label, make sure your printer is on and then move the pointer to the Print box.

If you want to save the names you've added to a letter file, move the pointer to the Save box and press the button. Be sure not to press another letter before you've saved your current additions, or the additions will be lost!

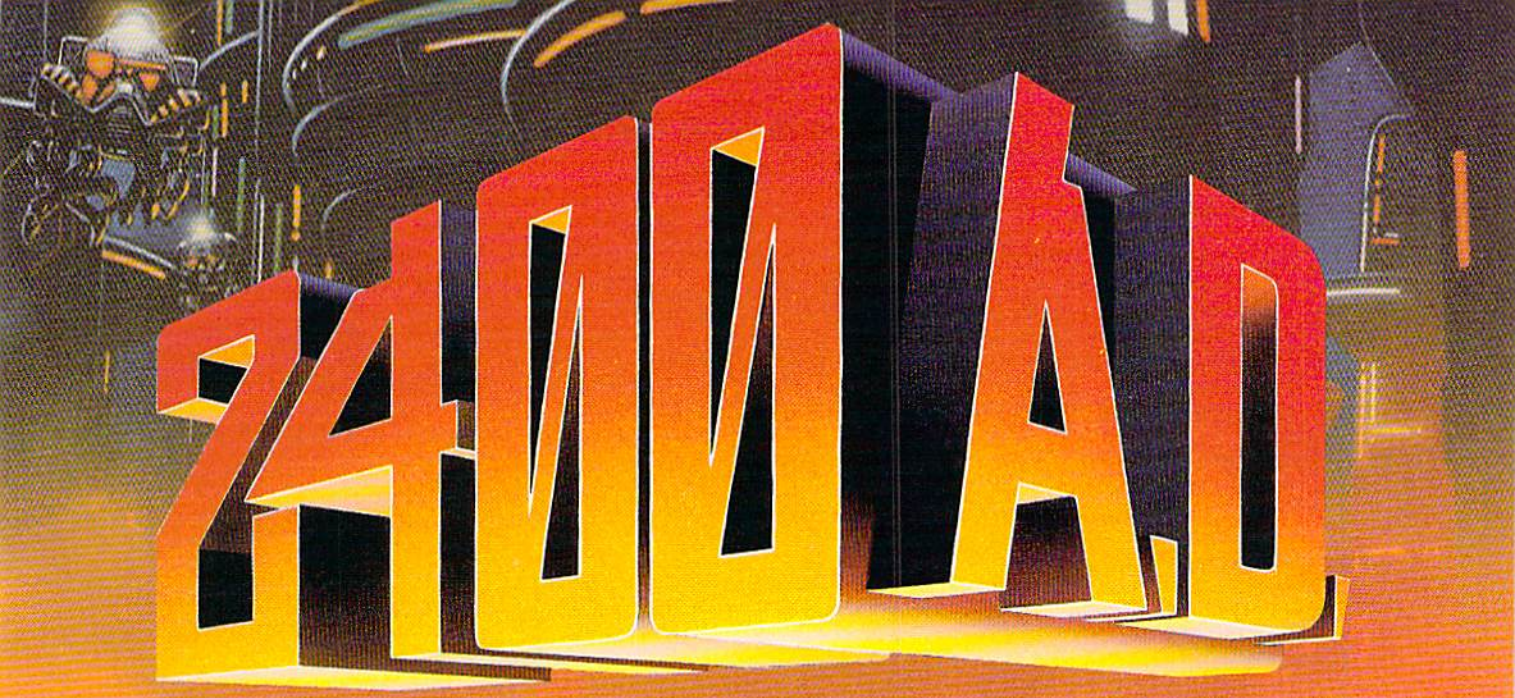

When you insert a new record into Address Book 128, you may encounter a small problem if you press the mouse button before it reaches the "Last Name" field. If the screen pointer turns red and will not move above any particular field, just press the return key, and the pointer will turn black. You can then use the mouse to position the cursor wherever you desire.

Leaving the program is as easy as moving the pointer to the Quit box. That's it—short and simple, but very handy! R

Neil Hansen, a senior in high school, has been programming on his C-128 for over two years. He also enjoys running in marathons and playing hockey. ►

RUN it right: **C-128 (in 40-Column mode); joystick or 1351 mouse**

ILLUSTRATED BY MARY JO MAZZELLA

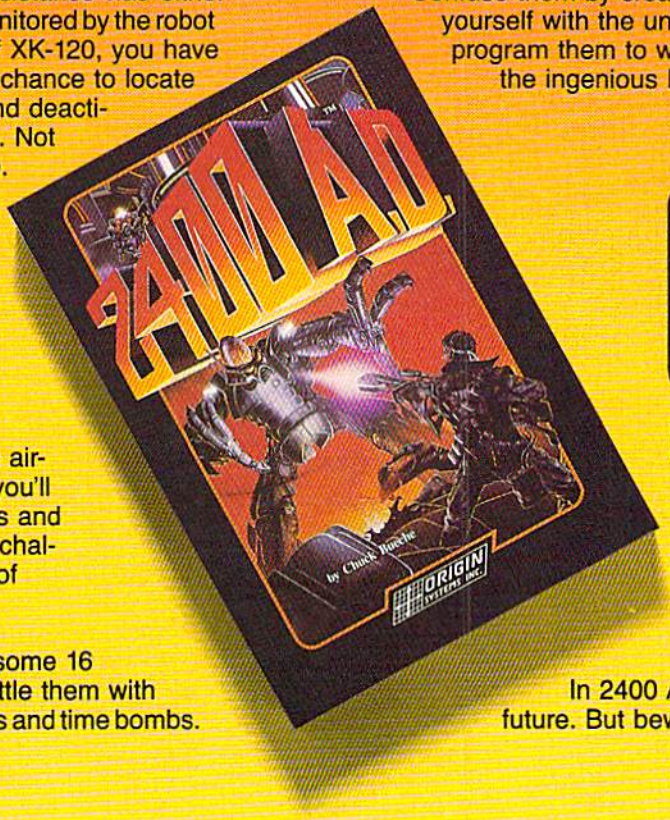

Want to be a hero?

Every last member of the resistance has either been captured or is closely monitored by the robot patrol. As a new inhabitant of XK-120, you have no police record. You have a chance to locate the central control console and deactivate the robot control system. Not a good chance, but a chance.

This science fiction role-playing game was created by Chuck Bueche, the author of AUTODUEL®. The fast paced action all takes place in an enclosed high-tech city of many levels.

As you hurry along extensive air-jet subways and slidewalks, you'll need to solve complex mazes and other intriguing puzzles. The challenges are non-stop and full of surprises.

On your mission, you'll face some 16 types of animated robots. Battle them with weapons like phasers, blasters and time bombs.

Confuse them by creating a duplicate image of yourself with the unique holoprojector. Or reprogram them to work for you by mastering the ingenious Directive Override option.

Realistic action allows you to move or climb over objects.

In 2400 A.D. you step far into the future. But beware. Each step you take could be your last.

Get Results

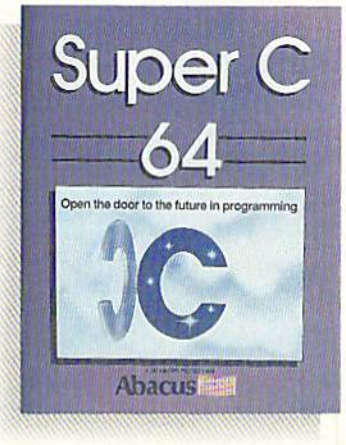

with proven software and books from Abacus.

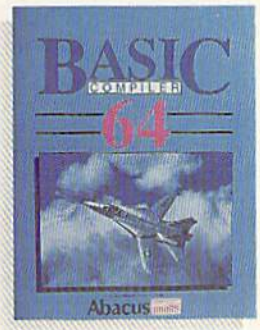

Super Pascal—Get the fastest and complete Pascal for your computer. **Super Pascal** is a full implementation of standard Pascal. Extensive editor features search, replace, etc. Even add machine language routines with the built-in assembler. Fast graphics library. C-64 version has high-speed DOS for faster access. More than just a compiler– **Super Pascal** is a complete system that gives you programming results.
C-64 $59.95 C-128 $59.95

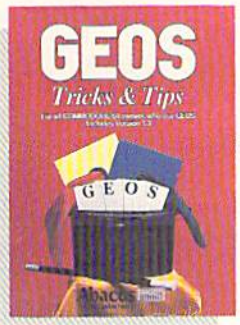

Cadpak—The professional design tool. Enter simple or intricate drawings with the keyboard, lightpen or 1531 mouse. With the flexible object editor you can create libraries of furniture, electronics, etc. as intricate as screen resolution permits. Zoom in to do detailed work. Produce exact scaled output to most printers in inches, feet, etc. Get design results fast with **Cadpak** and your Commodore® computer.
C-64 $39.95 C-128 $59.95

Super C—You can now develop software or just learn C on your computer. Easy-to-use and takes full advantage of this versatile language. Produces 6502 machine code and is many times faster than BASIC. Includes full-screen editor (search, replace and block operations), compiler, linker and handbook. Libraries for graphics and advanced math are included. Whether you want to learn C, or program in a serious C environment for your Commodore, **Super C** is the one to buy.
C-64 $59.95 C-128 $59.95

BASIC Compiler— Now anyone can make their BASIC programs run faster! Easily converts your programs into fast machine language or speed code. Even speed up programs written in Simon's Basic, Video Basic etc. If your program walks or crawls, give it speed to RUN!
C64 $39.95 C128 $59.95

GEOS™ Tricks & Tips— A new book with something for everyone. Contains over 50 tricks and tips that you can use everyday. Converts any word processor file into geoWrite format; edit existing GEOS fonts or create your own; Write in machine language or explore the internals of GEOS. **$16.95**

Please note our new address and phone numbers

Abacus

Dept. RB • 5370 52nd Street SE • Grand Rapids, MI 49508
Phone 616/698-0330 • Telex 709-101 • Telefax 616/698-0325

Call or write today for your **free** catalog or the name of your nearest dealer. Or you can order direct using your Visa, American Express or MasterCard. Add $4.00 per order for shipping and handling. Foreign orders add $12.00 per item. 30-day money back guarantee on software. Dealer inquiries welcome—over 2400 dealers nationwide.

Amiga®!

TextPro Amiga is a full-function word processing package. Easy-to-use, fast and powerful—with a suprising number of extras. $79.95

BeckerText Amiga is the professional word processor. WYSIWYG formatting. Automatic creation of table of contents and index. Expandable spelling checker. Merge graphics into text. Much more. $150.00

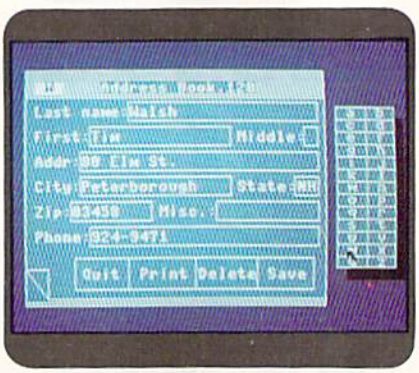

DataRetrieve Amiga is the powerful, and easy-to-use database. Sets up in minutes. Password security. Large capacity. Performs complex searches. Very flexible. $79.95

AssemPro Amiga unlocks the full power of the Amiga's 68000 processor. Integrated Editor, Debugger, Disassembler and Reassembler. Cross-reference list. Conditional assembly. $99.95

Call (616) 698-0330 or write for your free Amiga software and book catalog. More software and books coming soon!

FLIGHT SIMULATOR

$49.95

Nearly 1.5 million copies of this classic, premium flight simulation program have been sold to date, and there's still nothing even close to it. Compatible with SubLOGIC Scenery Disks.

STEALTH MISSION

$49.95

Winner of the 1988 CES "Best Strategy Game" Software Showcase Award. This advanced-technology strategic simulation is a stunning success, with sales challenging those of Flight Simulator. With nothing comparable on the market (despite similar titles), Stealth Mission's programming polish and strategic gaming excellence set new industry standards. Scenery Disk compatible.

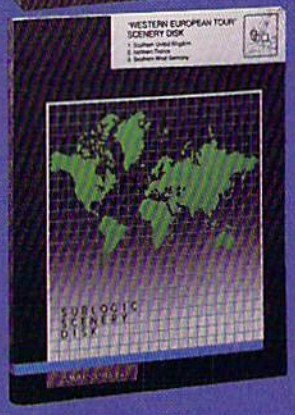

JET

$39.95

This award-winning jet fighter simulator defines the state of the art in action/combat simulation. Exciting and beautiful carrier-based sea missions complement multiple land-based combat scenarios. Jet's quick-reading documentation and easy flight controls provide unequalled action and fun. Scenery Disk compatible.

Special "Discover the World of SubLOGIC" promotional packaging:

- Jet for the Commodore 64/128 now includes a FREE beautiful Japan Scenery Disk, a $24.95 extra value!
- Jet is also available without Japan Scenery Disk for the special low "discover SubLOGIC" price of $29.95 through selected discount channels.

SCENERY DISKS

$24.95 each. For use with all SubLOGIC flight simulation products.

WESTERN EUROPEAN TOUR
Our latest and hottest! Detailed scenery covering southern Great Britain, northern France, and southern West Germany. The basis of our fun "Find Red Square" promotion.

JAPAN SCENERY DISK
Detailed scenery from Tokyo to Osaka. Delightful international adventure!

SAN FRANCISCO
Concentrated scenery covering San Francisco and the Bay area. A consistently best-selling favorite!

SCENERY DISK # 7
Eastern Seaboard. Includes: Washington, Charlotte, Jacksonville, Miami. Another best-seller!

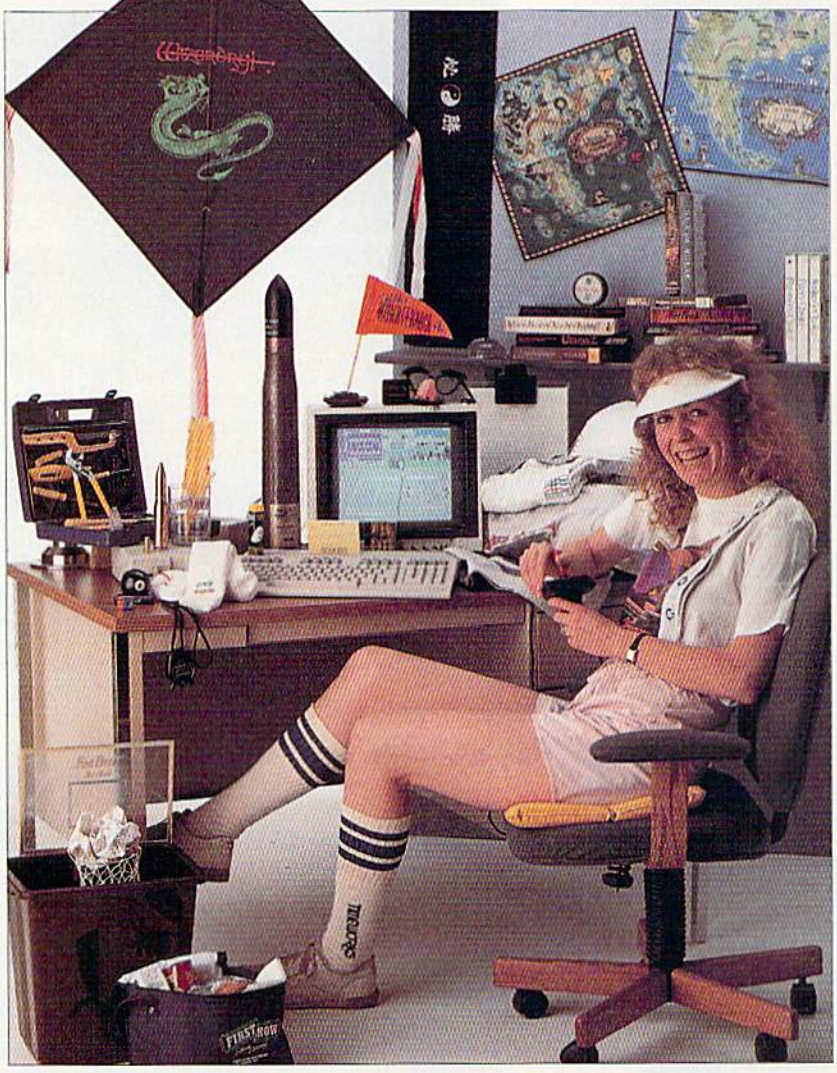

SCENERY DISK # 11
North-Eastern Border. Includes: Detroit, Lake Huron. Incredible variety, from industrial Detroit to beautiful Niagara Falls!

See your dealer, or write or call for more information. All products are available on disk for the Commodore 64/128 computers. For direct orders please indicate which product you want, and enclose the correct amount plus $2.50 for shipping and handling ($1.50 for each additional package). Please specify UPS or first class mail delivery. Visa, MasterCard, American Express, and Diners Club charges accepted.

Gumballs And Alarm Clocks

You'll be amazed and amused by some of the gimmicks used to promote software introductions.

What if Robin Leach were to take his "Lifestyles of the Rich and Famous" television show into the home of a software reviewer? Well, for one thing, he'd probably have to rename it "Lifestyles of the Bleary-Eyed and Unnoted."

The introduction might start something like this: "Here we are in the home of the best-known software reviewer in the world, Meg A. Byte. Naturally, we begin in the most important area of the house—the computer room. The Commodore 64 is here, with a digital travel clock perched atop the monitor. A clipboard sits beside the keyboard, and a stopwatch rests next to the clipboard. Meg's golf cap partially obscures a coffee cup, and, right beside the desk, a large life preserver dangles from a hook."

All and all, a curious collection for a computer room! What's the story behind this miscellany? Well, Meg's unusual computer-room furnishings are all promotional materials sent to her for free by software companies. Look around ►

By LONNIE BROWN

THINK YOU'RE BAD? PROVE IT.

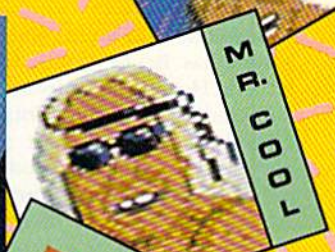

TAKE ON THE BODY-BASHING BAD BOYS OF THE GWF.

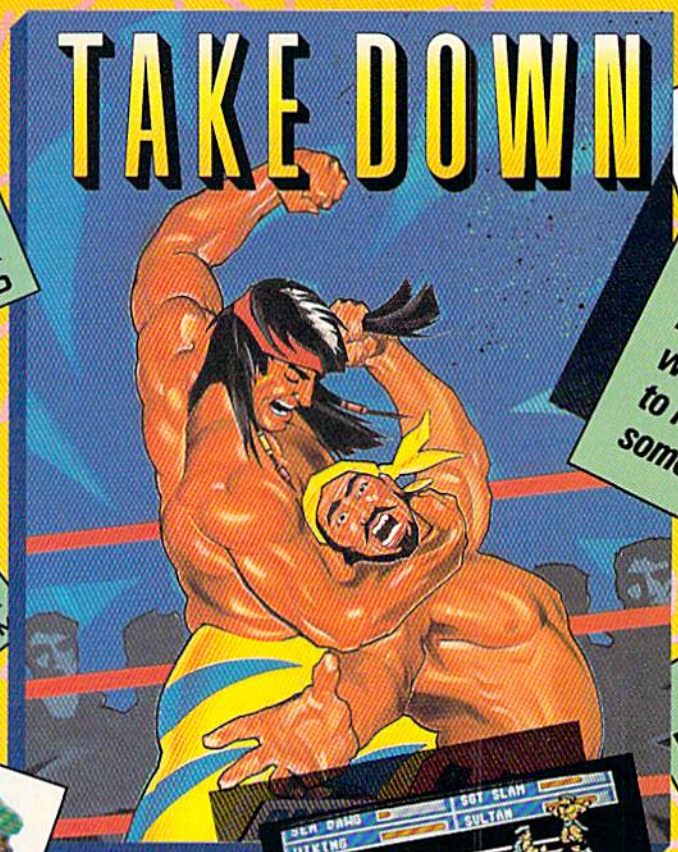

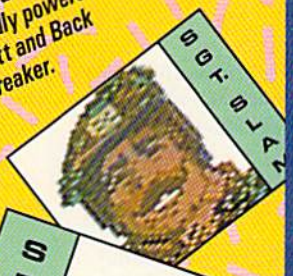

The Dark Raider of gladiators, his deadly powers include the Head Butt and Back Breaker.

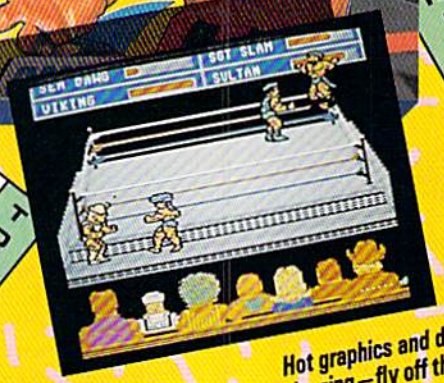

BEWARE: Eight wimp-wasting wrestlers are ready to rack you raw with some serious pain.

Half pirate, half pitbull, his Body Slams wreak mutiny on the mat! He'll feed yer carcass to the sharks with one hardy Head Slap.

The Oriental assassin with a ginsu style, his Head Throw and Drop Kick will chop you into a slab of sniveling sushi. Banzai!

Hot graphics and digitized sound put you right in the ring—fly off the top rope for a Big Splash!

GAMESTAR WRESTLING FEDERATION HIGHLIGHTS

- Intense 1- or 2-player tag team action lets you thrash computer challengers or bust up your buddies—with pain-inflicting ease!
- Each GWF maniac has his own mean set of merciless moves—Pile Drivers, Airplane Spins, Gut Busters, and more!
- Win the GWF championship belt, then strut your stuff around the ring so the chicks can check you out!

HOW TO ORDER: Visit your retailer or call 800-227-6900 for direct Visa/MasterCard orders. Direct price is $29.95 for the Commodore 64/128® version. A shipping and handling charge of $4.50 applies to all direct orders. Sales tax will be added to orders in California and Texas.

GAMESTAR

the homes or offices of computer magazine editors, reviewers, programmers or anyone who has many dealings with software companies, and you're bound to find similar artifacts.

In a sea of software, it isn't enough to send out a black, 5¼-inch floppy disk containing a program and hope that an editor or reviewer will latch on to it. Hundreds of disks with programs on them are sent out each year by software publishers. The trick is to get them some attention.

Budweiser has Spuds MacKenzie, Seagram's has Bruce Willis, IBM has the M*A*S*H gang, but software companies don't have that kind of money to spend. They'd be happy if their annual sales matched the advertising budgets of those industry leaders. Ad account executives are still glad to serve them, and where there's an ad account executive, there's a gimmick to get reviewers hooked.

Baiting the Hook

You never know what will wind up on a software reviewer's desk. A lifejacket. Stadium cushion. Duck feather. Hockey puck. (Duck feather? Did he say duck feather?) A pair of glasses with fake nose and mustache attached.

Not all gimmicks are tangible. One of the biggest extravaganzas in the industry has to be Mindscape's rock 'n' roll party each year at the summer Consumer Electronics Show. Admission is by invitation only, and the event plays to a standing-room-only crowd at a swank Chicago nightclub. It's a memorable occasion, featuring rock stars of the 50s, 60s and 70s.

Of course, the reviewers, magazine publishers, editors and advertising executives in the audience aren't going to run right out and buy a Mindscape product to show their appreciation. This is Mindscape's way of saying "thanks," but it's also done in the hope that when a reviewer hears The Beach Boys singing "California Girls," he or she will remember the party and, hence, the Mindscape disk that came in last week's mail.

Dennis Brisson, *RUN*'s editor-in-chief, lists as his favorite promotional item a beautiful silk-screen calendar depicting Mt. Fuji from, appropriately enough, the Fuji Company. "For three consecutive years, I've received a calendar from them. This year, at the risk of ruining a good thing, I wrote to the company thanking them for the calendar, but explaining that the magazine would be very unlikely to provide editorial coverage of their product in the foreseeable future. We'll see what happens next year."

Susan Dorn, former public relations contact for Progressive Peripherals and Software, baited her hooks with candy. She used to mail her press releases in a small shipping box instead of an envelope, and in each box she would include a small candy bar. "It cost a little more to send out the announcements," Dorn explained, "but it got attention. Software reviewers open boxes first and letters second. And people remembered us as the company that sent the candy."

Losing the Bait

Sometimes things don't work out quite as hoped. L. R. Shannon, who writes the peripherals and software col-

Name That Gimmick

WOULD SOFTWARE MANUFACTURERS' marketing ploys work with you? Put yourself in an editor's or reviewer's chair: match the following gimmicks with the appropriate software package.

Marketing Gimmick	Software
1. hockey puck	a. Rack 'Em (Accolade)
2. cartridge shells	b. Corruption (Rainbird)
3. backboard, net	c. Serve & Volley (Accolade)
4. black hood	d. Ultima series (Origin)
5. stadium cushion, peanuts, pennant	e. Superstar Ice Hockey (Mindscape)
6. miniature tank	f. Mavis Beacon Teaches Typing (Software Toolworks)
7. fake glasses, nose, moustache	g. Fast Break (Accolade)
8. poker chips, matchbook with note and phone number written inside	h. Murder on the Atlantic (Intracorp)
9. paper clip, wire	i. 4th & Inches (Accolade)
10. athletic socks	j. Heavy Metal (Access)
11. eight-ball, chalk, rack	k. Zak McKracken & the Alien Mindbenders (Lucasfilm)
12. tool kit	l. The Last Ninja (Mediagenic)
13. token and map	m. Steel Thunder (Accolade)

ANSWERS: 1. e; 2. j; 3. g; 4. l; 5. i; 6. m; 7. k; 8. b; 9. h; 10. c; 11. a; 12. f; 13. d.

umn for *The New York Times*, remembers one promotional item but not the game it came with. "I got a clock from a software company, and they didn't send any instructions with it. Now, I work with about 12 people—presumably intelligent people—and it took us at least ten man-hours to get this clock set right. Please," concluded Shannon, "tell them to send the instructions, too!"

Like most other professional software reviewers, Shannon retains the disks for future comparative articles but gives away the promotional "freebies." He's parted with Transformer toys, cushions, painter's hats, notepads—and the clock. "I think somebody's still trying to figure out how it works," he quipped.

Scott Wasser, who frequently writes reviews for *RUN*'s Software Gallery, asked, "Remember the feather?" Yes, as a fellow reviewer, I was tickled by the feather, too. It (and a cigar) preceded a review copy of Mediagenic's Howard the Duck, an arcade-type game that, like the movie, never progressed far beyond the nest.

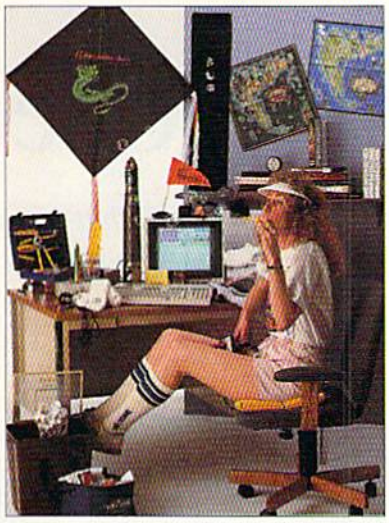

That the feather is remembered better than the product is a telling lesson about software promotions: A clever gimmick can't save a bad program. But then, most companies don't waste time or money promoting marginal software. "I figure that if a company has gone to the expense of sending along promotional items, the software must be worth a look," said Wasser.

The Better Baiter

That's exactly what Diane Orr and other account executives at Darien and Morra want to happen. From soap bubbles (packaged with Accolade's Bubble Ghost) to brightly colored gumballs (accompanying a swizzle-stick golf putter with Accolade's Mini-Putt), the goodies say, "Hey, look me over!"

Orr said her firm's promotional kits range in price from one dollar up to ten, depending on the product and how much the software company wants to spend. The number of kits they distribute also depends on the situation. "If it's a Commodore product, we'll send out lots of the kits, because we have a lot of reviewers working on Commodore products. If it's for IBM, we probably won't send as many."

Of the two Darien and Morra promotional kits that have drawn the most comment, one was inexpensive and one wasn't. "The gumballs we sent with Mini-Putt drew attention," she said, "and they didn't cost us a lot. On the other hand, when you have a customized promotional item—like the clock with Killed Until Dead—it can become a little more expensive."

More than the other gimmicks, the ever-present reminders are made to last.

Digital travel alarms are more expensive than gumballs to begin with, and, when you silk-screen the product's name on in red letters, attach fake sticks of dynamite and wrap the whole surprise in brown paper, the costs go up. "But it got a lot of attention," said Orr, who added that the reason they didn't include instructions for setting the clock was that it wouldn't have done most recipients any good. "The company that procured the clocks for us got them at a good price, partly because the instructions were all in Japanese."

What's in the Bait Bucket?

The little extras reviewers find in the mail sort out into three categories: the teasers, the clothing and the ever-present reminders. A teaser might be the ripped and scuffed left-handed racing glove that arrives in the mail with a note saying the glove's last wearer had a thrilling time. A few days later, a right-handed racing glove arrives—accompanied by the new car-racing program, Formula One.

The clothing includes the pair of surfer shorts Electronic Arts sent to promote its Skate or Die skateboard game. Sega's Out Run race-car game came with a baseball cap, and Commodore—accused of not giving good support to editors—mailed out a set of suspenders one Christmas. Then, of course, there are the myriad posters and T-shirts—emblazoned with the name and logo of the software developer or the game.

More than the other gimmicks, the ever-present reminders are made to last. "We don't want these to wind up in the closet or in the trash," said one public relations worker. "We want them to find their way into the everyday life of a writer or reviewer. Every time he or she looks at it, we want that person to think of our product and ask, 'Did I do that review yet?' " The clock with Killed Until Dead, the lifejacket with Apollo 18, the clipboard with Test Drive are all items that can't disappear into a stack of software. They stay out as reminders.

Then there are the gimmicks packaged with the software. Origin, for example, takes great pains to include cloth maps with the fantasy role-playing Ultima series. These maps are functional—to help guide the player through the game—but they also make excellent wall decorations.

Shrewd consumer that you are, you're probably asking, "Why don't these software companies knock off the $10 freebies and drop the price of their disks a few bucks?" Shrewd marketing consultants have the answer. For one thing, for each promotional kit sent out, a software company will sell thousands of disks, so the kit adds only a cent or two to production costs. Secondly, if a promotional kit gets a reviewer to boot up the disk, and if the review winds up in *RUN*'s Software Gallery, the kit has more than paid for itself. A favorable review—or any review at all, for that matter—frequently translates into increased sales.

Do promotional gimmicks work? Oh, yes! As one advertising executive said: "I know half of them work. The trouble is, I don't know which half." ■

Chummy Checkers

A new twist to an old game that you can play on your own or with another.

By TONY BRANTNER

Bet you haven't played checkers for a long time—or maybe you've never even learned. My computer version is designed to change all that by breathing life into the old game.

If you're unfamiliar with checkers, the board is divided into eight rows of eight squares each—just like a chessboard. The two players must try to clear each other's pieces from the board or hem the pieces in so they can't be moved. In my version, you can play against another person or the computer, and you can also watch the computer play itself. When people play, a single joystick plugged into port 2 controls both sides.

Type in Listing 1, using *RUN*'s Checksum program, and save a copy to disk before running it. When you start the game, you must first enter the number of people playing; then the player with the white pieces moves first.

Moving a piece involves two steps. First, use the joystick to position the flashing yellow cursor over the piece you want to move and press the fire-button. This makes the entire square flash. Next, move the cursor to the destination square and press the fire-button again. If the move is legal, the piece advances to the new square and your turn ends. If it's illegal, the coordinates clear so you can try again.

Jumping an opponent's piece to banish it from the board is done in the same manner, except your turn doesn't end automatically after you move. Instead, you have the option of jumping again by repeating the second step. When you want to end your turn, move the cursor to any square but the one that's flashing and press the fire-button. After each turn, the number of pieces each player has left is displayed at the sides of the screen.

You can move your pieces only in a forward direction until they reach your opponent's back row. Then, when they are "kinged," they can move forward or backward. Kinged pieces are identified by a K in the center.

In the one-person version of Checkers, the computer controls the black pieces and you control the white. Although the computer plays defensively, it can't resist the chance to jump an opposing piece, so, by using one of your pieces as bait, you may be able to set up a multiple jump for yourself.

Entering zero when you're prompted for the number of players puts the computer in Auto-Play mode. This feature is handy for getting acquainted with the game or studying the computer's strategy.

To end play, press the F1 key. If you press F1 during the computer's turn, the machine will finish its move before the game ends. R

Tony Brantner, a carpenter by trade, is a self-taught computer programmer who says he chose the C-64 because of its "tremendous" graphics potential.

HEAVY METAL: Modern Land Combat!

Do you have the courage, skill and intelligence to move up the ranks in today's modern army? Here's your chance to find out.

Find yourself in a full simulation of an M1 A1 Abrams tank, the U.S. Army's most sophisticated and powerful main battle tank.

Or how about behind the wheel of an XR 311 FAV (fast attack vehicle) going over 100 mph attacking enemy supply depots. Trying to defend your supply stations is going to be less difficult using an ADAT (air defense anti-tank) system, but it will never be easy. You'll face a challenge you never expected to get in OTS (Officer's Training School). Add to this the fact that battles are going on at three different fronts at once and you'll soon find out what you're made of. Do you have what it takes? TAKE THE HEAVY METAL CHALLENGE TO FIND OUT!

Enemy Spacecraft moving in for the kill!

Explore the ruins of an ancient civilization!

GET YOUR MONEY'S WORTH

"SUPER MAGAZINE! EVERY FEATURE IS A JOY TO READ. YOU'RE DOING GREAT!"

Rick Keefer, San Diego, CA

GREATER VALUE

Each month, more and more Commodore users find that *RUN* not only repays the low subscription cost, but actually increases the value of their computer, issue after issue!

MANY SPECIAL FEATURES

In addition, *RUN*'s **Telecomputing Workshop** brings you all the latest developments in the fast-growing sphere of telecommunications for your Commodore, with special emphasis on efficient, error-free use. Users of GEOS will want to check out *RUN*'s **geoWatch** column for the insight into new products and enhancements for this great operating system. If you've got a problem or question regarding the how-to's and why's of Commodore hardware, software and programming, **Commodore Clinic** is for you. And, whether you're a computing novice or pro, you can pick up helpful hints and tricks in *RUN*'s **Magic** column (or share your own tricks with others!).

SAVE TIME • SAVE MONEY!

If *RUN*'s expert product reviews help you avoid even one mistaken purchase, you'll again save yourself enough to repay your subscription, not to mention saving time and hassle. And when you're ready to buy, you won't find a better marketplace than in the pages of *RUN*.

SAVE 35% RIGHT NOW!

Speaking of savings, you can start those savings right now, by entering your *RUN* subscription at a full 35% off the cover price! Just complete the coupon below. Be assured of getting every issue of *RUN*, to add value and enjoyment to each hour you spend with your computer.

► ***Better yet,*** **CALL TOLL FREE 1-800-258-5473 and get *RUN* working for you even sooner!**

YES, **I want to start saving and add to my computing enjoyment every month!** Send me the next 12 issues of *RUN* at the low introductory rate of just **$22.97**—a full **35%** off the newsstand price!

Program Your Mouse and RAM Expander

Spice up your programs with the speed of RAM expansion and the ease the mouse provides.

By TOM BROWN

Two of the newest hardware accessories for the C-64 and C-128 owner are the 1351 proportional mouse and the 1764, 1700 and 1750 RAM expanders from Commodore. While these devices open up new computing opportunities, learning to program them can be frustrating to experienced and novice programmers alike, since they don't work like other Commodore devices.

The Mouse

The first mouse for the C-64 and C-128, the Commodore 1350, operates similarly to a joystick (or an upside-down trackball). While it has two buttons on top, only the left one can be used; the right button is wired in such a way that it can't be read properly. Since the 1350 is, in reality, nothing more than a joystick, its movements are often difficult to control.

The latest mouse from Commodore, the 1351, improves the situation by operating, not as a joystick, but as a pair of paddles. You may remember the paddle controller from the old Atari Pong-type games, where the only required movement is left-right or up-down. One end of the paddle is connected to a constant power source, the other to the SID (sound) chip, and between those two points there's a variable resistor (or potentiometer, from which we get the nickname "pot" for each paddle).

As you turn the paddle's knob, the voltage reaching the SID chip varies between 0 and +5, then the chip converts this voltage to a one-byte number in the range 0–255. Two paddles are normally connected to a single port, with one read at address 54297 ($D419) and the other at 54298 ($D41A), no matter which port is used.

It would be nice if we could use these two bytes as-is for screen coordinates.

However, there are two problems. First, unless you're in Multicolor mode, the screen is more than 255 pixels (dots) wide. Second, the conversion process isn't steady; the value for each paddle "jitters" back and forth, making it necessary to read the paddle many times and calculate an average.

The 1351 avoids these problems by using a whole new procedure. It keeps track of its own movements, automatically relaying its current X-Y position to the computer via the two SID chip locations mentioned above—one location for X and the other for Y.

Now, remember that I said the value in each location is a one-byte number (in the range 0–255). However, only six of the eight bits in that byte are meaningful (the highest and lowest aren't used). In other words, the actual X and Y values transferred to the computer range from 0 to 63.

Although the values of both X and Y are now smaller than the range of available screen positions, they are reliable and free of that annoying jitter. To use these smaller numbers, the *last* value read from the mouse must be stored and compared to the current value. This is because, when either the X or Y value reaches 64, it wraps around to 0! Comparing old and new values tells which direction the mouse is moving, so it's apparent whether a current value of 0 is actually 0 or 64, 128 or some other number.

It's necessary to keep an eye on the mouse at all times, so the movement is fast and accurate, but this can't be done from Basic. The only way the mouse can be used effectively is with a machine language routine included in the "housekeeping" chores the computer performs 60 times a second in its "interrupt" routine. Fortunately, the 1351 is packaged with a utility disk containing what we need, including several Basic programs that demonstrate how to use the machine language mouse reader for both the C-64 and C-128.

The Mouse Readers

The C-64 mouse reader is called M1351.64.BIN and loads into memory at 49152 ($C000). To use the mouse in the front port, activate the reader with SYS 49152; to use it in the rear port, activate it with SYS 49155. As you move the mouse around, the reader changes the position of sprite 0. Therefore, if your Basic program needs to know that position, use the following line:

```
X=PEEK(53248)+((PEEK(53264)AND1)
*256):Y=PEEK(53249)
```

Naturally, to see the mouse pointer move around the screen, you'll have to activate sprite 0. If you use the pointer definition (called Mouse.Pointer) on the 1351 disk, remember that it loads at 3584 ($0E00), which will interfere with your Basic program, unless the program is very short or you change the start-of-Basic pointer to point above 3584. The following lines activate the sprite, set its color to white, position it on the screen ►

RUN it right: **C-64 or C-128; 1351 mouse; 1700, 1750 or 1764 RAM expander**

Spend a little and get the works...

RUN WORKS.

Introducing RUN Works. . .a complete selection of all the software programs you'll ever need.

On just one disk!

RUN Works is easy to use. But it works hard so you don't have to. Which means you're more productive and efficient.

And you can buy RUN Works at a fraction of the price you'd pay for comparable programs—up to $50 each elsewhere.

What's more, RUN Works and its fully illustrated documentation booklet are only available through this special offer.

So order today. There's no risk. RUN Works is 100% Money Back Guaranteed for thirty days.

Call 1-800-343-0728
Or send back the coupon or order card today.

YES! I want to spend just a little and get the software works for my Commodore 64 or 128. Please rush me all seven RUN Works programs on just one easy-to-use disk.

I'll pay only $24.97!

PO Box 802, Peterborough, NH 03458

at 100,100 and set the sprite definition to 3584:

```
V=53248:POKEV+21,1:
POKEV+39,1:
POKEV+0,100:POKEV+1,100:POKEV+
  16,0:
POKE2040,56
```

The buttons on the 1351 mouse appear as joystick values, so reading them is relatively simple by using the following Basic line:

```
B=PEEK(C)AND17:B=ABS((B=1)+
  (B=16)*2+(B=17)*3)
```

Variable C should have a value of 56321 if you're using the front port or 56320 if you're using the rear port. The value returned in B is 0 if no button was pressed, 1 if the left button was pressed, 2 if the right button was pressed and 3 if both buttons were pressed. This lets you use the value in On/GoTo constructions in your own programs.

The C-128 reader is called M1351.128.BIN and loads at 6384 ($1800). To use the mouse in the front port, activate the reader with SYS 6144; to use it in the rear port, activate it with SYS 6147. This reader operates the same way as the C-64 version—that is, by manipulating the position of sprite 0. However, Basic 7.0 provides commands that make it easier to use sprites:

```
X=RSPPOS(1,0):Y=RSPPOS(1,1):REM
  Find X and Y position
SPRITE 1,1,2:REM Turn sprite on
MOVSPR 1,100,100:REM Position sprite
  at 100,100
```

It's easier to use the pointer definition from the 1351 disk with the C-128, since the 128 reserves that memory location specifically for sprite definitions. The above sprite commands replace the Pokes necessary on the C-64.

To read the mouse buttons, use "JOY(1)" with the front port and "JOY(2)" with the rear port. If the value returned is 1, the right button was pressed; if it's greater than 127, the left button was pressed.

The RAM Expander

The 6510 or 8510 CPU chip, the brain of the C-64 or C-128 computer, can access only 64K of memory at a time, although Commodore engineers have found clever ways to get around this limit and make more than 64K available to the user. However, the CPU isn't the only chip that needs access to computer memory. Because the VIC chip (which provides all 40-column video support) lacks its own memory, it has to "steal" some temporarily from the CPU. This periodic theft is called direct memory access, or DMA.

While the VIC chip is the only built-in device to use DMA, external devices can access it via pin 13 of the expansion (cartridge) port. The Z-80 cartridge for the C-64 was the first to take advantage of this capability. The RAM expansion unit (REU) is another.

There are three RAM expanders currently available, all identical except for the amount of memory they contain. The 1700 and 1750, for use with the C-128, have 128K and 512K, respectively; the 1764, designed for the C-64, has 256K. Also, the 1764 is packaged with a replacement power supply, because the regular C-64 power supply is inadequate to support an REU, and you'd run the risk of ruining your power supply each time you turned on your computer.

When writing programs for the C-64, don't assume that the user is limited to 256K, since a C-128 owner can still use a 1700 or 1750 expander in 64 mode! Even when writing programs for the C-128, you can't be sure of the amount of REU memory available. There's a "trace" on the circuit board of the 1700/1750 that determines how much RAM the device has (similar to the one in the 1541 disk drive that determines the drive device number). Cutting the trace tells the REU controller it has 512K.

When the 1700 was originally released, a random five units, with their traces cut, were tested. Three of the five became 1750s! The other two had 256K (in effect becoming 1764s). These changes took place, not because the trace was cut, but because the additional RAM had been installed in the factory. However, there's no guarantee that currently available 1700s will change when you cut the trace, and doing so will certainly void your warranty.

The RAM expander obeys four commands: Fetch (Load), Stash (Save), Swap and Verify. Since these commands are similar to those used on a disk drive, the REU is often referred to as a RAM disk. Unfortunately, you can't use one as a disk drive without special software, because an REU can't be operated from Basic (at least on the C-64).

The REU works by adding its own input/output registers to computer memory at 57088 ($DF00), and information such as memory size, start addresses, and so forth, must be poked into the proper registers before a final poke is made to the command register to trigger a transfer. While it's possible to do this from Basic, it's not easy; Basic isn't designed for bit-wise operations (where you set or clear a single bit in a byte). Also, you can't access the RAM beneath the ROMs or the input/output (I/O) chips from Basic.

The most effective way to use an REU is, again, through machine language. The Basic program in Listing 1 pokes a short machine language routine into the cassette buffer, giving you RAM expander access to all the RAM in the C-64—including that under the ROMs and the I/O chips. Use the machine language with the following Basic line:

```
SYS 820,A,B,C,D,E
```

Variable A is the computer starting address; B is the computer ending address, plus 1; C is the REU start address; D is the REU bank number (0–7) and E is the command. The commands include 0 for Save (computer to REU), 1 for Load (REU to computer) and 2 for Swap.

The REU "bank" may seem strange if you're a C-64 user. The REU is similar to the C-128 in that its memory is divided into separate blocks, each 64K in length. The 1700 has two banks (numbered 0 and 1), the 1764 has four banks (0–3) and the 1750 has eight banks (0–7).

Note that the bank setting is for the *starting* REU bank and the *starting* REU address. If, during a transfer, the end of a bank is reached, the transfer will continue, using the start of the next highest bank of REU memory. If the end of the last bank is reached, it will wrap around to the start of bank 0.

If you're a C-64 user, *don't* put any valuable information at 65280 ($FF00) under the Kernal, since the Kernal is used to trigger the transfer. Also, since the C-64 REU routine halts all interrupts, including the nonmaskable interrupt (NMI), using the REU command with a modem or other RS-232 device is not recommended, since it may interfere with data transmission.

It's easier to program the REU on the C-64 than the C-128—for a couple of reasons. First, the memory of the 128 is more complex. Second, and more importantly, the Basic 7.0 commands supplied to operate the REU may not work properly! Look at the bottom of the last page of the 1700/1750 owner's manual and you'll see reference to a problem in version 0 of the C-128 ROMs, as well as a brief test to see if you have version 0 or version 1 ROMs (if PEEK(65408) returns a 0, then you have version 0).

The brevity of the note implies a minor problem, but it's really far from minor. The "bug" lives in the version 0 Kernal (which means the problem exists even in machine language), and it guar-

antees that some portion of transfers using any bank but 15 will result in ROM or I/O bytes being transferred instead of the RAM you intended. A second, relatively minor, bug prevents the Bank command from transferring bank 1 RAM. Instead, you have to manually set the VIC chip bank pointer to $D506, so both the VIC chip and the REU see the correct RAM.

Both bugs have been eliminated in version 1 ROMs. If you have version 0 ROMs, use the program in Listing 2 to effect the same fix. This program uses memory at the top of the function key page, but this should go unnoticed unless you use a lot of long key definitions.

Another oddity with the version 0 routine is that it deliberately makes sure the I/O chips are always banked in during the transfer (no matter what you set with the computer's Bank command). This, too, is fixed in version 1 ROMs and in Listing 2.

Basic 7.0 provides three commands for operating the RAM expander:

```
FETCH A,B,C,D
STASH A,B,C,D
SWAP A,B,C,D
```

Variable A contains the number of bytes to transfer (to a maximum of 65535), B is the starting address in the computer's memory, C is the starting address in the REU and D is the REU bank number (0–7). In version 1, or version 0 with the fix in place, use the Bank command to determine which computer bank is used for the transfer.

There are two types of interrupts possible on the 128, and version 1 ROMs and Listing 2 take care of only one. The other, the nonmaskable interrupt, can't be stopped with a simple SEI command in machine language. Fortunately, the only time you're likely to encounter an NMI (other than pressing the restore key) is when you're using the RS-232 port for telecommunications. In that case, you should restrict yourself to using bank 15 memory with the REU, to make sure the transfer won't be corrupted.

One final word of warning: You *must* have your C-128 running in 1-MHz (Slow) mode before triggering a transfer. Like the VIC chip, a RAM expander can't operate properly at the 128's faster speed. Ⓡ

Tom Brown is a freelance programmer with both public domain and commercial programs to his credit. He recently authored RUN's *telecommunications program, RUN Term 128.*

Trace the Light Fantastic

Enjoy the mesmerizing movement of these colorful, curve-generating lines.

By CHARLES ORCUTT

Colorful shapes undulate on the screen, one flowing into the other, fascinating to watch. That's the power of Rainbow Run, my C-64 kinetic art program.

The moving, largely curved forms that Rainbow Run creates on the screen are generated by straight lines. I've specified the coordinates of the end points of the first line, but then the program takes over, calculating the coordinates of new points and drawing a line between each successive pair.

This process continues indefinitely, but very shortly the program also starts erasing lines, beginning with the first. As pixels are drawn, they are recorded in a memory table, and the location in the table preceding the current position contains the information with which to erase previously lighted points.

The program follows some rules in its creative process. First, it calculates a mirror equivalent for each point, then acts on these points similarly. The mirroring is done from left to right and from top to bottom, but the sequence can be switched using a joystick in port 2. To activate vertical symmetry, move the joystick left; for horizontal symmetry, move the joystick right. A second rule dictates that when point generation (or what appears as a moving point) reaches a screen boundary, its direction reverses, its speed changes (randomly) and the display assumes a new color.

Rainbow Run is a machine language program in the form of a hex loader, and, although it's only about 1500 bytes long, it occupies all the C-64's available memory. It was inspired by Swish, the impressive kinetic art program by Glen Bredon, but it introduces two important variations.

First, it operates in Hi-Res mode, which provides better horizontal resolution than the Multicolor mode Swish uses. Second, because hi-res calls for more speed, Rainbow Run employs a different technique for providing data for the erasure tail. Swish records the end points of the lines in its memory table, which means the line-draw routine must continuously recalculate the points. Rainbow Run records the memory locations and bit set of the plots, so three bytes are needed to record the erasure tail for each lighted pixel.

Type in the Basic program in Listing 1, checking for typos with *RUN*'s Checksum program, and save a copy to disk. Then run that program to write a file called "+RAINBOW ML" to your disk. Finally, load and run the "+RAINBOW ML" program to see the display. Just make sure you have some time to spare, because you'll be glued to the screen! Ⓡ

Charles Orcutt is an electronics technician who's worked in broadcasting and computer repair. He's owned Commodores since 1983 and spends a lot of his spare time working with Basic and machine language.

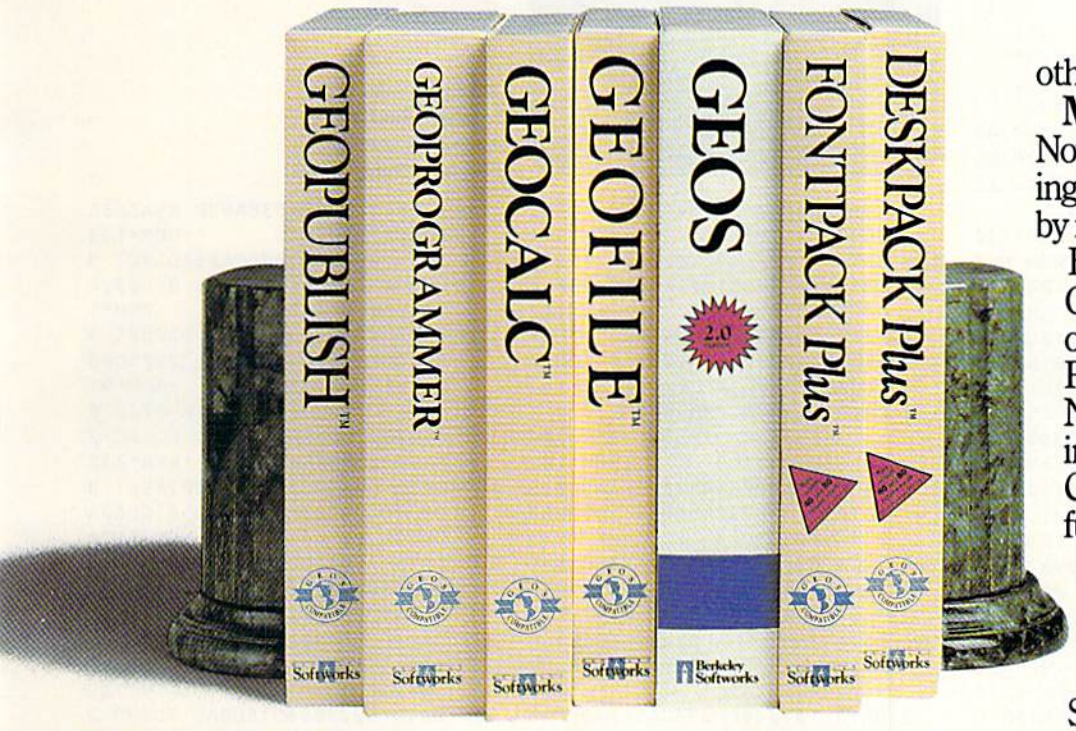

Listing 1. Rainbow Run program.

RUN it right: **C-64**

ILLUSTRATED BY ANDREA FARACLAS

IS YOUR FAMILY THIS WELL RELATED?

If your productivity programs don't relate to each other, it's time to consider adopting GEOS,™ the totally integrated software system that magazines like *Commodore, RUN, Info* and *Compute!'s Gazette* have recognized as Commodore's first family of software.

All GEOS programs look and work the same way.

Like any good family, GEOS products work together and grow together. In fact, for every application you add, your capacity for production actually multiplies.

A strong family resemblance.

All GEOS products work and look pretty much the same. Same menus. Same icons. So once you learn how to point and click a mouse, you pretty much know how geoPublish, geoFile, geoCalc and every other family member works, too. Pretty simple, huh? Well, that's the idea.

GEOS family members freely swap data with one another, too, so importing text and graphics between programs is never a problem. Which means you spend more time creating stuff and less time deciphering all those other instruction manuals.

Marry into the family.

Now, when it comes to improving your looks, the best way is by marrying into our family.

Because GEOS Text and Graphics Grabbers take your old data (like Word Writer,† Paper Clip,† Print Shop† or Newsroom†) and convert it into GEOS format so that your C64 or 128 can deliver beautiful offspring quicker than you can say, "Yeah, but how am I gonna convert all my non-GEOS files?"

And that's pretty darn quick.

So if you'd like your software to relate to each other better, why not move in with us? After all, the last thing you need from your software is family problems.

THE GEOS FAMILY

GEOS 2.0* $59.95
The Graphic Environment Operating System for C64's and C128's. With WYSIWYG word processing, spell checking, mail merging, full color painting, fast-loading disk-Turbo and support for all GEOS-compatible applications. GEOS 128 available at $69.95.

GEOPUBLISH* $49.95
The desktop publisher with a host of professional features for creating flyers, newsletters, brochures and more.

DESKPACK *PLUS $29.95**
Graphics Grabber for importing art from Print Shop, Newsroom and Print Master; Calendar; Icon Editor; Blackjack; geoDex and geoMerge. Runs in both 40 and 80 column mode.

FONTPACK *PLUS $29.95**
A collection of 53 fonts for use with GEOS applications. Runs in both 40 and 80 column mode.

GEOCALC* $49.95
Spreadsheet for analyzing all types of numerical data. Available for 128's at $69.95.

GEOFILE* $49.95
Database manager that sorts, edits and prioritizes data. Available for 128's at $69.95.

GEOPROGRAMMER 2.0* $69.95
An assembly language authoring tool and debugger. Takes full advantage of memory space in both C64's and C128's.

To order, call 1-800-443-0100 Ext. 234 or see your local Commodore dealer.

ALL NEW
FOR YOUR
1988 TAX RETURNS!
Prints Directly Onto IRS Forms

SWIFTAX™...

EVEN IF YOU'VE NEVER PREPARED A TAX RETURN, SWIFTAX MAKES IT EASY TO DO YOUR OWN —*AND KEEP MORE OF WHAT YOU EARN!*

Step-by-step, line-by-line, SWIFTAX guides you through your Federal tax returns, and instructs you on which forms you must complete. This software program contains Full User Prompts, an abundance of Help Screens (which you'll find right in the program) that make SWIFTAX so easy to use, *you may not need the manual!*

FREE
with every program—
THE PRICE WATERHOUSE "PERSONAL TAX ADVISER"
Tax Information & Planning Guide

- **Prints out itemized lists of interest, dividends, etc., that are too long for the standard forms.**
- **Sets up unique Taxpayer Files,** enabling you to make changes to your completed tax returns at a later date.

Features:

- **Guides you through every step of the tax preparation process** with line-by-line instructions and full user prompts; and instructs you on which forms you must complete.
- **Quickly performs all calculations,** including specially-designed worksheets and entries, with the tax tables stored in the program.
- **Automatically checks your tax alternatives,** and calculates the lowest amount of income tax you must pay.
- **Calculates and completes the most commonly used supporting schedules—1, A, B, C, D, F, R, SE, and Forms 2106, 2441, and 8615—stores the totals, and automatically enters this information onto your forms 1040, 1040A, or 1040EZ.**
- **Prints your tax information directly onto IRS forms, as well as blank paper.**
- **A special HELP! Screen summarizes all the new 1988 tax law changes,** at the press of a key.

This Program Also Includes:

- **A Multi-function Calculator,** at your command at the press of a key.
- **Swiftkeys:** Provides instant access to any forms and schedules included in your tax return.
- **Context Sensitive HELP! Screens:** Just press a key and you'll be guided through the program with complete, line-by-line instructions.
- **Timeworks Exchange Policy:** Allows you to purchase the 1989 SWIFTAX at half price.

For Commodore 64, 64c,
or 128 Computers (64K, 40 column) . . . **$49.99**

Also available for IBM PC &
Apple IIe, IIc, IIC Plus, IIGS **$69.95**

Find SWIFTAX at your local dealer or order direct from Timeworks. Just call:

Power Drive

Here's how to realize the potential of Commodore's 1581 disk drive.

By GENE AMAYA

For years, the major complaint expressed by owners of the C-64 and C-128 computers has been the slowness of the disk drive—that is, the time required to load or save a program. To solve the problem, they've purchased fast loaders, and, in some cases, software publishers have included fast-loading routines in their programs.

Now, there's another solution: the 1581 disk drive. Not only is it much faster than the older 1541 and 1571 drives, but it's quiet, doesn't heat up and can store huge quantities of data on one disk. If you're interested in a drive that can load an article of this length in less than five seconds on the C-128 and store approximately 45 articles of this size on one disk, then read on.

Commodore accomplished all this by coming up with a new design, which departs in major ways from the older drives. To assist those interested in the new drive, I've written this article to explain the 1581's operation and how you may realize its potential. The focus is on coupling the 1581 with a C-128, but most of the information applies equally to other Commodore computers.

The Disk

The 1581 uses a standard, double-sided 3½-inch disk. This 1-megabyte, unformatted storage medium is not only smaller, but somewhat more durable than the normal 5¼-inch disk. You can write-protect it by moving a plastic tab located on the disk case.

When formatted, a 1581 disk contains 80 tracks, with 40 sectors each, and can accept 296 files. One full track is devoted to the directory, leaving a mind-boggling 3160 blocks for data storage. To illustrate just how much data such a disk can hold, one was enough to receive the contents of an entire box of partially filled 5¼-inch floppies, a total of 3056 blocks in 170 files. Put another way, one disk has sufficient space to store a word processing program such as RUN Script, a medium-sized dictionary and approximately 250 pages of single-spaced text.

Of course, there's a price to pay for this massive storage capability: Formatting a disk takes a long time, since more than twice as many tracks are being formatted as on a standard disk. Other disk maintenance tasks, such as validating, take longer, too.

The 1581 is engineered to increase speed of operation by minimizing drive-head movement. First of all, in the logical track arrangement (the way the computer sees it; the physical arrangement is somewhat different and will not be described here), track 40 contains all the directory information, including the bit availability map (BAM). The drive then writes to the tracks in a sequence that proceeds away from track 40, first to one side and then to the other: track 41, then track 39, then 42, then 38, and so on.

Furthermore, the drive's two heads, one above and one below the disk, write to one track until it is full, even if it takes more than one file to fill it. On a given track, sectors 1 to 20 are written to one side of the disk, and sectors 21 to 40 to the other side. In view of this arrangement, you should always use disks that have a double-sided rating designation. Otherwise, you may lose data. You do not, of course, have to be concerned with where a particular file resides, since this is managed by the drive's DOS.

Partitions

If it's convenient to your purposes to categorize your files, you might want to use the 1581 disk's option of being divided into sections, called partitions, each of which contains its own subdirectory and is accessed through the main, or root, directory. Any partition you establish must reside completely above or below track 40, because the DOS won't let it contain that track, which holds the main directory. The demo disk that comes with the 1581 contains a utility program you can use to partition your disks should you want to use this option.

You may find the advantages of partitioning overbalanced by certain drawbacks. For example, files within a partition are invisible to the main directory, which contains only partition names; so, to view or load a file, you must remember which partition it's in and access the subdirectory for that partition. Using partitions also requires your involvement in establishing partition size and monitoring space available within the partition. Furthermore, you should be aware that if the partition directory track is overwritten, all data in that partition may be lost.

Disk Management

Disk management is of prime importance with the 1581. Listing a directory with up to 296 entries to find a specific file is cumbersome at best. Before transferring a group of files to the 1581, develop a plan and test it on a disk containing at least 100 directory entries, so you'll know the plan is valid for a full disk. You might consider partitioning the disk, but there is the drawback that you can't go directly from one subdirectory to another, but must access each through the main directory.

There is another 1581 disk management option available that involves the * wild card. In addition to the conventional use of the wild card, the 1581 lets you use it as the first character in a search string. Therefore, by selectively naming or renaming files using filenames with a common ending, you can display portions of the master directory. For example, if all files saved from RUN-Script ended with .R, it would be easy

to display a directory of those files by entering CATALOG "*.R" on the C-128, or LOAD"$:*.R",8 on the C-64. If you used number 1 as the suffix character, CATALOG"*1" would list entries ending in 1, 11, 21, and so forth. Files ending with a discrete number could be accessed by assigning a leading decimal point to the suffix (as in .1 or .11) and including the decimal point in the search string. The * can also be used as the middle character of a search string. For example, CATALOG"R*T" (C-128) or LOAD"$:R*T",8 (C-64) would find files named REPORT, RUNSCRIPT, RECEIPTS-AUGUST, and so forth.

If you use RUN Script from *RUN*'s Productivity Pak III disk as your word processor, you can list a partial directory to the screen by pressing F1$$ and F3, then typing in the search string, including an appropriately placed wild card, and pressing return. Usually, if the search string is well chosen, all the matching filenames will fit on one screen. Try it with a disk that contains more than 100 files.

As the size of a directory grows, the C-128's F3 key tends to be used less and the Catalog or Directory command, accompanied by a search string, more. These commands need not be typed in full. DI{shiftedR} and C{shiftedA} work equally well. C{shiftedA}"**" displays the disk name and number of blocks free.

There's still another approach to handling large directories: a menu program that displays the directory on the screen a section at a time or lets you scroll it on the screen. An easy method to load programs is normally associated with menu programs of this type. This is probably your best approach with disks that contain more than 100 files, but I have yet to find a menu program that does all the things desirable with the C-128/1581 combination. Try to find one that's fast-loading, displays a lot of files per screen and provides for easy selection of the program to be loaded. Once you've found a good program, you could set it to autoboot, so you can easily locate the program you need.

Commodore's 3½-inch disk drive is a wonder of compact storage space.

Software Compatibility

As I indicated earlier, the 1581 directory occupies track 40. The directory on the 1541 and similar drives, on the other hand, is on track 18. This difference renders some programs unusable with the 1581 and requires others to be modified to work properly. For instance, programs containing direct-access commands, such as Block Read, to read a directory must be modified to identify the correct track and sector containing the desired file information.

An example of this is the Auto Menu program on the Productivity Pak III disk, where line 130 must be changed from T = 18:S = 1 to T = 40:S = 3. The directory of the 1581 functions similarly to that of the 1541, but it's constructed differently. As you can see from the example, file information on a 1541 starts at sector 1, while on the 1581 it starts at sector 3.

A little thought reveals why some other programs won't work with a 1581 without extensive modification. Attempting to copy from a 1541 to a 1581 using a non-1581-compatible copy program that makes a track-for-track duplication will write the directory on track 18, if it works at all. Track 40 will be totally blank, thereby making the copy useless. Not only will the directory be dislocated, the tracks on the 1581 will contain from 17 to 21 sectors instead of the normal 40. Even if the directory could be written to track 40 in the proper format, the DOS would probably crash due to the partially filled tracks.

I assume that most, if not all, 1541 fast-copy programs and fast loaders don't work with the 1581. These programs and cartridges usually modify the drive DOS, and, because the 1581's elec-

Answers to Important Questions About Lyco Computer!

Why shop at Lyco Computer?

Lyco Computer is one of, if not the largest, and most established firms to provide only quality name brand computer products at prices 30% to 50% below retail. We've set many industry standards, and we are setting the pace for many more in the future. Our standards include: a separate department for customer service; a price guarantee; guaranteed factory fresh merchandise; diverse payment and shipping policies, including a C.O.D. policy which allows customers to have products in their hands before paying anything. Selection places Lyco at the forefront of the industry. Due to our in-stock volume, we cannot advertise all of our products. If you do not see the product you want advertised, call Lyco Marketing toll free.

How do I know I will get the product I need?

Our marketing staff is well-educated in the computer industry. They receive continuous formal training by our manufacturers which enables them to develop and maintain a high degree of expertise on the products they represent. Though our strict guarantee on providing only new merchandise prohibits free trial periods and a guarantee on compatibility, a wealth of knowledge is available to our customers to help with the purchasing decision. As thousands of people every week capitalize on our savings and services, we hope you too, will make Lyco Computer your first choice.

What about warranty or service?

We decided several years ago that a Customer Service Department was needed in the industry. Unfortunately, few of our competitors offer this service. Our Customer Service Department is available at **(717) 494-1670** to provide assistance in all warranty matters. Our product line enjoys "name brand recognition," and we back all of our manufacturer's stated warranty terms. Many manufacturers will allow defective products to be exchanged. Before returning any item that appears to be defective, we ask that you call our Customer Service Department to assist you in determining if the product is defective. If the product is determined defective, they will give you a special authorization number and speed processing of your order.

Will you rush an item to me?

Since 1981, we have set the standard in the industry by processing orders within 24 hours — not 4 to 6 weeks. We offer next day air, two day air, standard UPS, and postal international shipping services. Our records show we fill 95% of our orders daily. Temporary shortages are normally filled within 10 days. If an order cannot be filled within 60 days, we refund your money in full, unless you choose to wait for the order and benefit from the price savings. Any time prior to shipment, you may cancel or change the out of stock product by contacting our Customer Service representatives.

How do I order?

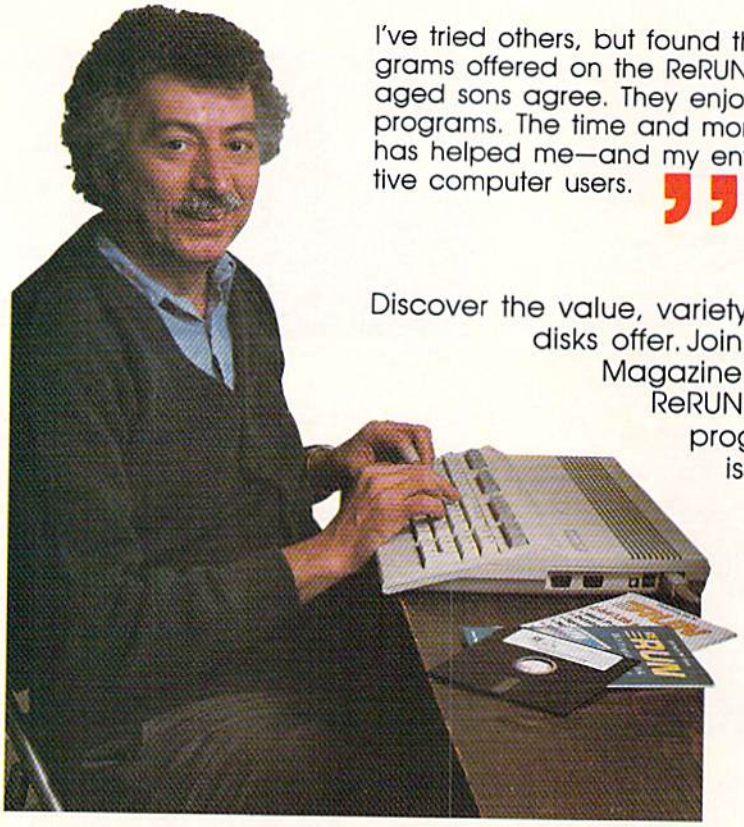

Send your order to Lyco Computer, P.O. Box 5088, Jersey Shore, PA, 17740. Or, call **1-800-233-8760** or **(717) 494-1030**. We provide four payment methods. We have always accepted C.O.D. orders through UPS. Prepaid orders over $50 are shipped freight-free. For orders under $50, please add $3 for freight. Orders prepaid by a certified check or money order are shipped immediately. Personal and company checks require a 4 week waiting period prior to shipping. Visa and Master Card orders are accepted for your convenience, but we cannot pass along the 4% discount offered for cash. Purchase orders are accepted from Educational Institutions. We only charge sales tax on items delivered in Pennsylvania. For APO, FPO, and international orders, please add $5 plus 3% for priority mail. Advertised prices and availability are subject to change.

Sales: 1-800-233-8760 or 717-494-1030

NOW ONLY $69.97 A YEAR!

"For my money, RERUN DISKS are the greatest."

I've tried others, but found that the quality and number of programs offered on the ReRUN disk can't be beat. My two teenaged sons agree. They enjoy the games and educational programs. The time and money that I've saved with ReRUN has helped me—and my entire family—become more productive computer users."

—Jim Palmieri, ReRUN Subscriber
Farmingville, NY

Discover the value, variety and ease-of-use that ReRUN disks offer. Join the thousands of RUN Magazine readers who subscribe to ReRUN. Each disk is packed with programs from the two most recent issues of RUN, plus never-before-published BONUS programs. ReRUN is great software at an affordable price, including:

- Word Processing
- Spreadsheets
- Data Bases
- Educational Applications
- Home Entertainment

RERUN

From p. 63.

tronic architecture is quite different from the 1541's, it won't accept the modifying commands.

The 1581 also doesn't work with some online services, such as QuantumLink. During part of the downloading process, Q-Link reads track 18 to verify that the receiving disk has sufficient space for the data, but, on the 1581, track 40 contains the blocks-free information.

CP/M users need to purchase a 1581-specific CP/M disk. It's available from Commodore.

Excluding the Burst mode, the 1581 operates at one speed with the C-64 and a faster speed with the C-128, where it loads about 26 blocks per second. The drive reads the serial bus to determine if it's connected to a fast device (C-128) or slow device (C-64 and others) and adjusts data transfer speed accordingly.

Copying to 1581 Format

Protected software can't be copied to the 1581 format for obvious reasons, but many other packages and files can be. As I mentioned before, you can't use a copy program that creates a track-for-track duplication of the original disk, but copy programs that employ a load-and-save scheme will work. Unicopy, which is included on the utility disk that comes with the drive, accomplishes this task nicely.

Although many programs can be copied to the 1581 format and will run with no difficulty, it's best to test each program after you've transferred it. If it hangs up or won't run at all, perhaps you can debug it. Debugging a compiled or machine language program takes considerable expertise, and you must have the proper compiler, but most programs that hang up are ones that address specific tracks and sectors of the drive memory, and they take less programming knowledge to fix.

Try listing the program and scanning the lines between those that open and close the drive for commands like Block Read, M-R, or others that you'll find in chapters 6 and 7 of the *1581 User's Guide*. If you find such a command, try to determine if it's the source of the problem and then correct it.

It may not be obvious that some programs require modification. One such appears on page 107 of the *User's Guide*. I ran it several times before I realized that the disk-side information was incorrect. After I determined that the program was originally written for the 1571, changing CHR$(239) in line 170 to CHR$(32) corrected the problem.

On the other side of the coin, sometimes a program may appear to need modification when it doesn't; you just didn't follow the procedure properly in running it. Experience has shown me that most non-copy-protected programs can be copied and will run properly without modification, the exceptions being disk-drive utilities.

A utility disk and documentation come with the 1581, but they have some problems. First, the documentation doesn't fully explain how the programs operate. For example, it took me several tries to determine the proper steps to make the autoboot program work, because an erroneous message indicates that the autoboot track contains data.

Also, a program for copying a file from one disk to another using a single 1581 is not included in the package. Fortunately, Unicopy 128, written by Jim Butterfield, does this task nicely and can be downloaded from QuantumLink. Finally, the Catalog function in the Sector Editor program displays only the first 99 disk directory entries. This limitation appears in other software used with other drives, such as the 1541, but it's normally not a problem because of the unlikelihood of exceeding the 99 entries. I shouldn't be too critical here, though, because the 1581 utility disk programs aren't intended to be 1581-unique; they're provided for use with any one of several drives.

A final word of warning: Be sure to heed the advice on page 7 of the *1581 User's Guide* about removing the disk before turning the power off. The 1581 is not as forgiving as the 1541, and I've lost two disks for failing to do this. Apparently, the heads are parked over track 1 when the power is cut and the cover on the disk exerts pressure against the heads. If the disk is removed, a portion of track 1 is destroyed. Then, the next time the disk is used, the directory can't be accessed, because the DOS tries to read track 1 before track 40. This hypothesis is based on the fact that after many tries, I did access the directory on a damaged disk and it appeared to be intact. Attempts to format these damaged disks always abort with read error 23 or write error 25 on track 1, sector 0.

Drawbacks aside, after using a 1581 drive for a while, you'll be reluctant to go back to your 1541, and, if you have a C-128, you'll unleash the full power of this speedy mass storage device. ■

Gene Amaya, a Certified Professional Logistician and logistics engineering specialist, is also a programmer primarily interested in adapting applications software for use with the C-128 and the 1581 drive.

AUTHORS WANTED!

RUN IS ALWAYS on the lookout for programs and articles that contain interesting and useful ideas. For the most part, those ideas come from you, our readers. We rely on you to keep our files well stocked with articles and programs from which to choose.

What kinds of articles do we need? We are looking for programs—of all kinds, shapes, sizes and colors. We need useful applications for the home, small business and school. We need utilities, programmers aids, creativity software and games.

We are sure many of you have developed unique programs that you use every day. You may not realize that a whole community of users is waiting to read about and share your creations.

If you are not a programmer, don't despair. We still need you. The introduction of new Commodore products—GEOS, the 1351 mouse, the 17xx series of RAM expanders and the 1581 drive—has opened up a vast area of topics for you to write about. What commercial software packages do you use that support these devices? What are their strengths and weaknesses? Users and potential users need to know.

These are just suggestions; we're sure you can think of more. Consider this an invitation to share your knowledge and computing experiences with tens of thousands of other Commodore users. And you will be rewarded for your efforts.

To help you submit those articles and programs for publication, we provide the *RUN* author's guidelines. These information sheets give you an idea of what kinds of material we are looking for and take you step by step through the process of preparing your articles for submission.

For a free copy, send a self-addressed, stamped, business-size envelope to:

A Love-ly Idea

Send personalized Valentines this year, with the help of your Commodore.

By JIM BORDEN

February brings out the romantic in the stodgiest of us, and sends us in droves to the Hallmark store. But wouldn't your thoughts seem more heartfelt if they were "homemade?" Well, with Valentine Maker, you can design your own greetings, even if you're not handy with pen and brush, then save your designs to disk and print them out for cards. The program works with the Commodore MPS-803 printer and compatibles, as well as most Star and Epson models.

When you run Valentine Maker, the help screen appears and asks you to select a printer. If you have a Commodore or compatible, enter 0. If you have a Star (Gemini) or Epson or compatible, enter 1 or 2. You must specify a printer at this point; you can't do it later. After you type the printer number and press return, there's a short delay while several machine language routines are read into memory.

The graphic screen and the help screen are Valentine Maker's two displays. The former is for creating designs, while the latter lists the commands you can use and is the launching point for screen saves and loads. You toggle between the screens with control/H.

As the help screen indicates, the control key is used to execute all functions except loads and saves. The functions listed in the top part of the help display can be activated from the graphic screen only.

An example of what's possible with The Valentine Maker program.

Creating Designs

Your designs can consist of keyboard characters in three sizes and pictures that I've built into the program. The three character sizes are normal (one-column), selected with control/N; big (four-column), selected with control/B; and jumbo (8-column), selected with control/J. Only uppercase/graphics characters are available. You can display them in reverse by pressing control/9.

A special graphic screen cursor, consisting of two dots, indicates the upper-left and lower-right corners of the block that will contain the next character you type. You can see the block if you activate Reverse mode. Since you can't see the block in Regular mode, you can "fine tune" the position of a big or jumbo character by moving the cursor in normal size (where the dots more nearly indicate the size of the character), then switching to the larger size to type the character.

Typing a character at the end of a line moves the cursor to the next line, except when you're at the bottom of the screen. In that case, the cursor advances to the home position.

I've built three pictures into Valentine Maker: a box of candy (control/C or the stop key), a heart (control/L, for love) and a vase of flowers (control/F). The pictures must fit entirely on the screen or their commands will produce nothing. Also, if two overlap, the more recent one will obliterate part of the earlier one.

You can change the pictures to adapt the program to Christmas or any other occasion. Just note that the Data statement above each picture is its printed (not displayed) width and height, and that you can't include any reverse (RVS) codes in the Print statement. Even if you change the pictures, control/C, control/L and control/F will still be the commands to display them.

All the keys except Commodore/shift, the color keys and the function keys work on the graphic screen.

Saving and Loading

You can save your design screens to disk by moving to the help screen and pressing the S key (not control/S). When prompted, type a filename for the screen and press return. If you've already used that name on the disk, an error message will appear and the screen won't be saved. To identify screen files in the directory, Valentine Maker automatically prefixes their filenames with a period. During the save, the display toggles to the graphic screen, then, when the save is complete, the help screen is restored. ►

RUN SPECIAL ISSUE

Get A Jump On The 5th Annual RUN Special Issue—

ORDER NOW!

And catch this *runaway best seller* for only $3.95!

The RUN Special Issue has become a must-have for every Commodore C-64 and C-128 user. And this year's issue promises to be our hottest RUN yet—supplies won't last long so don't delay. *Rush* your order in today.

DON'T WALK . RUN

VALUABLE REFERENCE CARD FREE WITH EVERY ISSUE!

A GIANT pull-out programmers' guide chock full of handy codes, peeks, pokes, commands and more for both the C-64 and C-128. With the latest info for the 1351 Mouse, RAM Expanders and 1581 Disk Drive.

PLUS

A Head Start For Both Beginners and Pros

Be the first to enjoy these tips, utilities, games and tactics—priceless programming information and applications that will boost your productivity and computing power. Here's just a quick glimpse of what you'll get...

FAST START SPECIAL ISSUE PROGRAM DISK

To really RUN with speed, order the Special Issue Program Disk—every program in the issue on disk ready to load and run.

PLUS YOU'LL RECEIVE THESE FREE BONUS PROGRAMS:

- C-128 Sprite Librarian
- C-64 Sprite Database
- A Show Of Hands—sign language tutorial with graphics

● *The Best of Commodore Clinic*

Pages of the most-asked questions on programming, hardware and software from *RUN*'s readers—with insightful and revealing answers from Commodore computing expert Lou Wallace.

● *Never-before-published "Magic" Tricks*

We've thrown in a dozen of our favorite computing tricks from 1988, PLUS dozens of dazzlers you've never seen before.

● *Arcade Games—Including Gravitron, an Exciting Space Adventure.*

Test the limits of your skill and coordination with a challenging variety of *new* arcade games.

● *Programming, Utilities and Tutorials*

Whether you're a beginner or advanced programmer, you'll add *speed*, *power* and *productivity* to your C-64 and C-128, including:

- Adding C-128 sprite commands on your C-64
- Sprite tutorial for the beginning C-128 Basic programmer
- Programming sound on the Commodore
- Writing relative data files in Basic

To Run Away With the 5th Annual Special Issue call **1-800-343-0728** (in New Hampshire, **1-924-9471**) Or...look for the convenient post-paid order envelope in this issue!

RN289

Loading a screen is somewhat similar to saving one. Press L, enter the filename (without the period prefix) and press return. The screen will toggle, the new screen will load and the help screen will reappear.

PRINTOUTS

You can print a screen at any time by pressing control/P. The screen is dumped as a text/graphics printout, with quotation marks printed as bit-mapped characters to avoid Quote mode problems.

With either a Commodore or compatible printer, the picture appears wider in the printout than on the screen. If you have a Star (Gemini) or Epson printer, the dump produces a printout with proportions similar to those on the screen.

You might have to change the secondary address in the Open statement (line 1280) for your interface. If so, use a number that produces Transparent mode without line feeds. A value of 5 works for the Cardco B interface.

Try a few quick pictures to find out if your printer works properly with Valentine Maker; then, if necessary, change the secondary address and try again. When you find the best secondary address, save the program with the change.

If you use a cartridge such as the Epyx Fast Load, you might have to remove it to run this program. Again, do a quick picture, then save, load and print it. If the program doesn't work with the cartridge plugged in, you'll know before you end up with a masterpiece on the screen and a locked-up computer. R

Jim Borden, RUN's former Magic columnist, is a freelance programmer and writer.

COPY II® 64/128

NEW Version 3.4

BACKUP PROTECTED SOFTWARE FAST.

From the team who brought you Copy II for the Apple, the Macintosh and the IBM comes a revolutionary new copy program for the Commodore 64/128 computers.

- Copies many protected programs — automatically. (We update Copy II 64/128 regularly to handle new protections; you as a registered owner may update at any time for $15 plus $3 s/h.)
- Copies even protected disks in under 2 minutes (single drive), 1 minute (dual drive).
- Improved support for ROM updates on 1571 drives.
- Maximum of four disk swaps on a single drive.
- Includes fast loader, 12-second format.

Requires a Commodore 64, 128, or "D" computer with one or two 1541 or 1571 drives.

Sales/Information: call **503/690-8090**, 8 - 5 P.S.T., M-F. We accept VISA. Or send a check for $39.95 U.S. plus $3 s/h, $8 overseas.

Flight notes

4A

Exploring Japan with Jet - Now that Japan Scenery Disk is included with Jet, we'd like to offer some suggestions for exploring the Japanese countryside from the cockpit of your F-16.

First, a close-up view of Tokyo. Take off from Hyakuri Airport (North 18542, East 32874) and turn to a heading of 187 degrees. This flight path takes you into the peninsula forming the right boundary of Tokyo Bay (see Tokyo area chart). At Mach 1 this heading should bring you to New Tokyo International Airport at Narita in about five minutes. Turn right to a heading of 270 degrees at Narita to put yourself on a direct course to Tokyo. When Tokyo comes into view, throttle back to 45% and drop altitude to 1,000 feet to explore the city. Highlights including Tokyo Tower and the Emperor's Palace will be clearly visible, with many high-rise skyscrapers to the north. Head for Tokyo International Airport (Haneda) in the southwest part of the city. Make your approach and land at Tokyo International. Keep your airspeed low and don't overshoot the runway or you'll end up in Tokyo Bay! Next month - another Japanese adventure!

Submarine Action in the Pacific - Unparalleled action and realism have rocketed Up Periscope! to the top of the software charts! You command a World War II fleet class submarine. Start with a shakedown cruise out of the Navy's New London shipyards, then re-enact fourteen different historic patrols covering all Pacific theatres of war. Relive the famous final patrol of USS Tang when Commander Dick O'Kane was sunk by one of his own torpedoes. Intercept convoys in the Formosa Straight with USS Barb. Evade depth charge attacks, or go hunting on your own. Mastering the complexities of command are difficult but very rewarding.

Top Selling Scenery Disks This Month:

($24.95 each, for use with Flight Simulator II, Stealth Mission, and Jet)

1. "Western European Tour" Scenery Disk
2. Scenery Disk # 7 (U.S. Eastern Seaboard)
3. Scenery Disk # 3 (U.S. South Pacific)
4. Scenery Disk # 11 (U.S. North Eastern Border)
5. San Francisco Scenery Disk

See your dealer to purchase SubLOGIC products, or call us direct to order by charge card at (800) 637-4983. Illinois residents call (217) 359-8482.

SubLOGIC Corporation

WIN THE LOTTO

WITH YOUR HOME COMPUTER!

Use your home computer and Soft-Byte's amazing new **"Lotto Program"** to get more winning tickets.

In just seconds this software analyzes past winners and produces a powerful probability study on easy-to-read charts. With a single press of a key, you'll see trends, patterns, odds/evens, sum totals, number frequencies, and much more. It also includes automatic number wheeling, instant updating, and a built-in tutorial.

Ask your software dealer.

APPLE, IBM, and Commodore.....$24.95
Atari, Radio Shack.....$21.95
MacIntosh.....$29.95
Back-up Copies.....$3.00

Add $2.00 shipping and handling. Credit card orders approved by phone and shipped same day.

Make checks payable to **SOFT-BYTE** and mail to:

P.O. Box 556 Forest Park
Dayton, Ohio 45405

RUN AMOK

Item: A number of readers have asked for help in using Lou Wallace's Panels program (Panel Maker, November 1988, p. 50). First of all, when you type in the listing from the magazine, save it under the filename PANELS.BAS and run it. This causes the actual machine language Panels program to be created on disk. Then, to run programs that use Panels' commands, type, in Direct mode:

```
LOAD"PANELS",8,1
NEW
```

Or, if you want to have a program load Panels for you, add this line to the program:

```
10 IF A = 0 THEN A = 1:
   LOAD"PANELS",8,1
```

Item: We regret an error in the documentation for Crazy Caverns (December 1988, p. 48) that has brought us many complaining calls. The program was modified before publication, but we slipped in not making a necessary change in the article. In the little boot program (second column in the text), line 20 should read SYS 16384. ■

OUR POLICY

Our policy is to stock what we advertise and carry the best products available for your C64 and C128 computers. Over 400 of the best productivity, educational & technical software and a host of accessories in stock now! And CHECK OUT OUR C128 LINE! Your will be amazed at the number of products that we carry for this fantastic machine!

Home Designer

When the details are important!

Home Designer CAD 128

Given glowing ratings by every major Commodore magazine, this CAD system outclasses every other CAD program, because of its object-based design. With over 50 powerful commands, 5 drawing layers, superb support of library figures and lazer-quality printouts at ANY scale on your dot matrix printer or plotter, you can create drawings so accurate that a blueprint can be made from them!

Tired of working with poor quality/inaccurate print-outs, manipulating little dots on a bit-map, giving up on detailed work because you can't zoom in close enough? Join the professionals!

only $45.00

mouse or joystick required

NEW!Engineering Library disk available now. **$10.00**

SKETCHPAD 128

Brand new from Free Spirit, Sketchpad 128 fully supports your C128 and takes advantage of its crisp 80 column graphics capabilities. It is packed with all the features of a professional drawing package such as drawing SMOOTH freehand lines, 3D Solids, creating Slideshows, Cut & Paste, Clip, Flip, Enlarge, Shaded Fill Patterns, a variety of Fonts, Air Brush and more! It supports Printshop graphics and is completely compatible with all BASIC 8 files.

Sketchpad 128 unleashes the graphics power of your C128! It supports your 1351 Mouse, 64K Video Chip, 1581 drive and 80 column display. **What more could any real C128 user ask for?**

ONLY $24.00

HOT NEWS!

NEWS MAKER 128

Finally somebody (Free Spirit Software) has introduced a desk top publishing program for the 128 in its native mode! Take a few moments to think about what should be included! Would you like the crisp & clear 80 column screen? Would you like to zip across the screen with a 1351 mouse? Could you use a Ram Disk that can store multi-page documents & graphics available at the click of a mouse? Also how about storing up to 45 fonts in the Ram Disk for instant access? How about if you could use Print Shop graphics directly from the Print Shop disk? Also be able to use pictures and graphics created with Sketchpad 128 and Basic 8.0. Would you prefer graphic tools that would allow you to draw custom art directly? How about supporting 2 text modes and 9 font sizes? Pour sequential files into columns? Adjust columns around graphics! or type text directly to the screen?

ONLY $24.00

C128D (or 64K video) and 80 column monitor

1541/1571 DRIVE ALIGNMENT

1541/1571 Drive Alignment

This excellent alignment program is a must have for every Commodore owner. Easy to use, it helps you to align your drive so that it runs just as if it were new! The simple instructional manual and on-screen help prompt you thru the alignment procedure and help you adjust the speed and head stop of your drives. It even includes instructions on how to load the alignment program when nothing else will load. Don't be caught short! We get more RED LABEL orders for this program, then any other program we sell. Save yourself the expense! Order now, keep it in your library and use the 1541/1571 Drive Alignment program regularly!! Works on the C64, C128, and SX64 for both the 1541 and 1571 drives.

STILL ONLY $25.00

BASIC 8 IS BACK!!

!NEW PACKAGING!
!NEW SUPPORT!

This popular package adds extensive 80 column graphics capabilities to your C128. A must for C128 programmers! As an added bonus several preprogammed BASIC 8 applications, such as BASIC PAINT, WRITE and CALC, are included on the flip side!

Free Spirit Software Inc.

JUST $29

ICON FACTORY

Convert, Enlarge, Alter, Enhance, Crop, Invert, Flip, Reduce and even Smooth graphics with this great graphics conversion utility.

OUR PRICE $25

Photo Finish

"Optimize" your Hi-Res graphics producing hardcopy with FOUR TIMES the resolution of standard printer dumps.

OUR PRICE $19

ORDERING INSTRUCTIONS

For your convenience, you can place a phone order 24 HOURS/7 DAYS A WEEK on our TOLL FREE LINE 1 800 638 5757. Price, Availability and Compatability Checks are also Welcome on our order line, Monday thru Friday, 9AM 4PM EST. AFTER HOURS, Orders Only Please!! When placing an order, please specify your COMPUTER MODEL, HOME & DAYTIME PHONE NUMBER, SHIPPING ADDRESS, METHOD OF PAYMENT and ITEMS ORDERED. To help us serve you better, please have all your information, including your CHARGE CARD number, ready before you call us.

ACCEPTED PAYMENT METHODS: We gladly accept payment by, PREPAID BY PERSONAL CHECK (will not hold for clearing) or MONEY ORDER. COD (continental USA only AND $4.00 ADDITIONAL); MASTERCARD; VISA; SCHOOL PURCHASE ORDERS. All payment must be in USA DOLLARS. THERE IS NO SURCHARGE FOR CHARGE CARDS and your card is NOT charged until we ship.

TECHNICAL SUPPORT

We do our very best to help you with your product selections, before you order and after you receive your product. General questions, price, and compatibility with your computer, etc. will be handled by our order staff at the time you place your order. BUT if you have specific, detailed questions about a product, printer compatibility questions etc., you will get the most help from our TECHNICAL SUPPORT LINE at 215 683 5699. Call Monday thru Friday, 9AM 4PM EST, and our trained tech staff will be happy to help you.

SHIPPING POLICY

ALL ORDERS received before 3PM EST will normally be shipped same or next business day. Out of Stock items will be shipped by the same shipping method as original order, normally within 3 or 4 business days. All UPS shipments are sent SIGNATURE REQUIRED/NO DRIVER RELEASE. ADD the following shipping charges to your TOTAL software order.

UPS: GROUND $4.00 (cont USA ONLY); AIR/RUSH $7.00 (includes Puerto Rico/Hawaii); OVERNIGHT $12.00 PLUS $2.50 per item (must be received by 12 NOON)

PRIORITY MAIL: USA $4.00 (includes APO/FPO); CANADA/MEXICO $6.00; OTHER FOREIGN $4.00 handling PLUS Actual Shipping (minimum $12.00)

RETURN POLICY

We have a liberal return policy to better service your needs. Software piracy is a problem, but as long as our policy is not abused, we will continue to honor it. If within 15 days from the time you receive an item, you are not satisfied with it for any reason, you may return it to us for either a refund, exchange or open credit. REFUNDS ARE SUBJECT TO A 10% RESTOCKING FEE PER ITEM RETURNED ($5.00 MINIMUM PER ITEM). A DEFECTIVE ITEM will be replaced with the same item (NO CHARGE... of course). EXCHANGES/OPEN CREDITS will gladly be issued for the FULL PURCHASE PRICE OF THE ITEM.

One Step Beyond Basic

Knowing the subtleties of your computer is the key to more sophisticated programming.

By MORTON KEVELSON

In using Basic, you've become familiar with the operation of the Peek and Poke commands, although you may not know just what they do to the computer. These commands give the Basic programmer direct access to the insides of the machine—a link to both the hardware and the machine language programs that govern its behavior.

When you program in Basic, you're actually providing a list of instructions for subsequent interpretation by a large machine language program that's built into the permanent memory of the computer. The computer can't understand Basic directly, but, under the control of this Basic interpreter, it can execute the programs you write.

Basic uses portions of the computer's RAM (random access memory) as a kind of scratch pad for its operations. By carefully manipulating the contents of RAM, you can make Basic behave in unexpected and useful ways.

We work with two-byte numbers that represent addresses in the computer's memory. In general, Basic uses these addresses in RAM as pointers or vectors. Pointers can be used to identify the places in RAM or ROM (read-only memory) where data is stored, or they can be used as markers to identify regions in RAM. Basic examines the address it's directed to by the pointer and uses or manipulates the data it finds there; or, it compares the pointer to other values and takes appropriate action.

A vector represents the starting address of another machine language program or subroutine. Machine language instructions are normally executed in the order in which they are stored in memory.

However, the use of vectors lets the programmer change the order of execution of the instructions. One way of accomplishing this is to store the starting address of the program or the subroutine to which execution must branch.

This is somewhat similar to Basic's GoTo command.

The Microprocessor

The C-64 and C-128 are based on the 6510 and 8502 microprocessors, which are slightly modified versions of the popular 8-bit 6502 microprocessor. The 6510 and 8502 are functionally identical with the 6502 from a programmer's viewpoint, the only essential difference being that addresses 0 and 1 actually constitute a hardware port built into the 6510/8502. Thus, any reference materials on the 6502 apply to the 6510/8502, as well.

As an 8-bit microprocessor, the 6510/8502 handles data eight bits, or one byte, at a time. Since each bit can be 0 or 1 ("off" or "on," electrically speaking; hence, the employment of the base-2 number system in computer mathematics), we can easily calculate that a single byte can assume 256 possible values, ranging from 0 to 255 (the sum of 210 through 217). It's obvious that a range of 256 numbers isn't going to let you perform much useful calculation.

Programmers get around this limitation by combining bytes to represent a wider range of numbers, a process similar to combining the digits 0–9 to generate larger numbers. The 6510/8502 processor manipulates two bytes at a time (8 + 8 bits) to generate 65536 addresses (the 0 address plus the sum of 210 through 2115). As a result, the combination of two bytes can address 65536 memory locations. The first address is 0 and the last is 65535. Addresses are stored and examined in low-byte, high-byte format. That is, the value of the first byte is combined with 256 times the value of the second byte to generate the actual address.

Let's try some experiments. In Direct mode from the C-64's keyboard, enter:

```
PRINT PEEK(43)
```

or in C-128 mode:

```
PRINT PEEK(45)
```

In both cases, the computer should respond with a 1 (low-byte values).

Now for the high-byte values. On the C-64, try:

```
PRINT PEEK(44)
```

You should get an 8. Then, on the C-128, try:

```
PRINT PEEK(46)
```

This should result in 28. These numbers are the keys to the starting addresses for the storage of a Basic program in each computer's memory.

We can calculate the actual value of this address (low-byte value plus 256 times the high-byte value) or let the computer do it. On the C-64 enter:

```
PRINT (PEEK(43) + 256*PEEK(44))
```

The answer should be 2049. On the C-128,

```
PRINT (PEEK(45) + 256*PEEK(46)
```

should result in 7169.

Programmers usually refer to the high byte as the page number. Thus, a 6510/8502 can address 256 pages of memory, with each page containing 256 bytes. If you continue with machine language ►

programming, you'll discover that the first two pages, 0 and 1, have particular significance to the microprocessor.

Both the C-64 and the C-128 actually contain more than the 65536 bytes of memory that can be accessed directly by the microprocessor. The C-64 contains additional memory in the form of ROM, where the Basic interpreter and the Kernal are stored. The C-128 actually contains two 65536-byte banks of RAM and even more ROM than the C-64. Both computers have additional hardware in the form of custom memory-management chips that assist the microprocessor in accessing the extra memory.

In the C-64, the interpretation of a Basic program is a complex dance in which the microprocessor fetches its instructions from the ROM in one bank while it manipulates the Basic in the RAM of another bank. The C-128 contains an eternal triangle, with the Basic ROM in one bank, the Basic program stored in the RAM of a second bank, and the numeric and string data that's used by the Basic program stored in RAM in yet a third bank. It's this memory manipulation of hardware and software that makes the C-64 and the C-128 the most sophisticated 8-bit computers of all time. (Manipulation of the C-64 and C-128 memory bank schemes is an advanced topic beyond the scope of this article.)

The addresses we've examined represent the start of the Basic program storage area in memory. You might also expect the end of the Basic program to be at an address the computer knows, enabling you to keep track of how much space is left for your program. This is true, except there's more to a Basic program than instructions. A working program manipulates numeric and string data, which requires storage space of its own, so the Basic interpreter must allocate space for this data as well.

Table 1 lists the pointers Basic uses to keep track of things. The listed contents of these pointers are their values after power-up or a reset and before any programs have been entered or loaded or any variables have been assigned. For the C-128, the addresses stored in these pointers require special interpretation. The Start-of-Basic, End-of-Program and Top-of-Basic pointers contain addresses in bank 0 RAM. The remaining pointers all contain addresses located in bank 1 RAM.

Several Basic commands can directly affect the contents of these pointers. Conversely, you can manipulate the contents to suit your own purposes. For example, you may want to reserve parts of RAM for storage of sprites, bit-mapped graphics or machine language programs.

Table 1. Pointers used in Commodore Basic.

Function	Address		Contents	
	C-64	C-128	C-64	C-128
Start-of-Basic	43,44	45,46	1,8	1,28
Start-of-Variables	45,46	47,48	3,8	0,4
End-of-Program		4624,4625		3,28
Top-of-Basic		4626,4627		0,255
Start-of-Arrays	47,48	49,50	3,8	0,4
End-of-Arrays + 1	49,50	51,52	3,8	0,4
Bottom-of-Strings	51,52	53,54	0,160	0,255
End-of-Memory	55,56	57,58	0,160	0,255

Memory Management

Now we'll examine how Basic manages its memory resources, looking at the C-64 and C-128 separately, since they differ significantly in how they handle memory. Starting with the C-64, Table 2 shows the allocation of address space by Basic. Notice that the Basic program storage area actually contains four components. The start and end of each component are stored in the pointers I've mentioned above, with the values in these pointers dynamically allocated as Basic uses RAM.

Let's start with the FRE function. It returns a value that represents the remaining space available for Basic program or data storage. Try it out with:

```
PRINT FRE(0)
```

The 0 is a dummy variable that could be replaced by practically anything. The chances are that you got a negative number, which simply means you have more than 32767 bytes free. The value returned by FRE is an unsigned two-byte integer, and, since Basic only knows about signed two-byte integers, it interprets the result as negative. To fix this, enter:

```
PRINT FRE(0) + 65536
```

or

```
PRINT FRE(0) + 2116
```

What FRE actually does is subtract the value of the pointer in End-of-Arrays + 1 from the value of the pointer in Bottom-of-Strings. You can easily change the value that's returned by FRE by changing the contents of those two pointers.

It would be even more useful to reserve part of RAM for some other purpose, say a machine language subroutine or a bit-mapped graphics screen. For example, change the End-of-Memory pointer with:

```
POKE 56,128
```

This effectively reserves 8K of RAM, from 32768 to 40959, for your own use. Of course, to finish the job you must also change Bottom-of-Strings with:

```
POKE 52,128
```

As an alternative to the second of these Poke commands, you could use a CLR command. In addition to setting the Bottom-of-Strings pointer equal to the Top-of-Memory pointer, CLR sets the End-of-Arrays + 1 pointer and the Start-of-Arrays pointer equal to the Start-of-Variables pointer. As a result, all of a program's variables are lost, but the program remains in memory. If CLR is executed from a running program, all the variables are reset, For-Next and GoSub-Return references are lost, input/output activity is aborted, files are aborted (but not closed), and

Table 2. Allocation of C-64 memory by Basic.

0 – 1023:	System RAM
1024 – 2047:	Screen RAM
2048 – 40959:	Basic program storage; String Data; Array Data; Variable Data; Program Code
40960 – 49151:	Basic ROM
49152 – 53247:	Free RAM
53248 – 57343:	Input/output hardware Color Memory Character Generator
57344 – 65535:	Kernal ROM

the keyboard and screen are made the active input/output devices.

It's also possible to reserve space at the end of a Basic program. After the program has loaded, check the contents of Start-of-Variables, increase it by the amount of space you need and then use the CLR command to adjust the other pointers accordingly. The reserved space can now be filled with whatever data you intended. The next Save command will save not only the program, but also the contents of the memory you've reserved at the end of the program. Finally, Start-of-Basic can be moved up to reserve some space before the program starts. For example, to allocate 1K, enter:

```
POKE 44,12:CLR
```

The Load command has some interesting properties. When executed in Direct mode, a disk load resets all the pointers, reads a program file into memory and then sets the pointers to the start and end of the program. If a nonrelocating LOAD"filename",8,1 is performed, an Out-of-Memory error may result on subsequent Load commands, because the three pointers in 45–50 were set above the Bottom-of-Strings pointer by the load. This would happen, for example, if you loaded a machine language program into the 4K block at 49152. The simplest way out of this dilemma is to execute a NEW after a nonrelocating load.

Under program control, the load does not reset any of the pointers. However, execution of whatever Basic program is in memory starts from wherever the Start-of-Basic pointer indicates. This means that in order to do things like load a machine language subroutine under program control, you have to write code something like the following:

```
10 IF FL = 1 THEN GOTO 30
20 FL = 1:LOAD"ml routine",8,1
30 rest of program
```

When this program is first run, variable FL equals 0. In line 20, FL is set to 1 and the nonrelocating load takes place. When it's done, execution resumes at line 10, but this time FL equals 1 and line 20 is bypassed.

The fact that the Load command doesn't change any pointers when executed under program control can effectively make an additional 4K available for Basic programming. The following code shows how:

```
10 POKE 44,192:POKE49152,0
20 LOAD"short program",8
```

In this example, line 10 sets Start-of-Basic to 49152 and pokes 0 into that address. The short program in line 20 can be any Basic program that's less than 4K long. That line loads the short program and starts executing it, leaving the original program, starting at 2048, intact and in memory.

You can pass control back to the original program with a line something like this:

```
100 POKE 44,8:GOTO line number in original program
```

Conversely, you can get back into the short program with something like:

```
200 POKE 44,192:GOTO line number in short program
```

This sort of thing can be lots of fun.

Memory Management in the C-128

In the C-128, things are somewhat different. To start with, that machine keeps its Basic program in RAM bank 0, while the associated strings and variables are stored in RAM bank 1, so there's less interaction between the memory pointers. Also in contrast to the C-64, the spaces available for program and data storage are independent of one another, so data storage isn't restricted by the length of the program. Finally, the C-128 has the BLoad and BSave commands to facilitate handling the contents of memory.

One thing you will have to watch out for is the Graphic statement. When GRAPHIC N (with N any value from 1 through 4) is executed, the Start-of-Basic pointer is moved up 9K. Specifically, the content of address 46 is changed from 28 to 64. If a GRAPHIC CLR is executed, the reverse takes place. In addition, any Basic programs in memory at the time are moved to the new location.

In the C-128, it's easy to reserve memory at the top of program storage in RAM bank 0. Just change the contents of 4626 and 4627. For example, to reserve 4K enter:

```
POKE 4627,240
```

The FRE(0) function returns the available memory in RAM bank 0 as the difference between the values in Top-of-Basic and End-of-Program. In the C-128, the resulting 16-bit, unsigned integer is handled properly without any further effort by you. It's also possible to allocate memory in RAM bank 1 by adjusting the contents of Start-of-Variables or End-of-Memory. In either case, it's necessary to adjust the other pointers or perform a CLR to finish the job. The FRE(1) function returns the difference between the End-of-Arrays + 1 pointer and the Bottom-of-Strings pointer.

We've made just a start at drawing the memory map of the C-64 and C-128. To sketch in more, you'll need good reference material, such as the books listed in Table 3. If you're a C-128 user, don't neglect the C-64 library. An understanding of the design of the C-64, especially the operation of the sound and graphic chips, is essential to learning the C-128. ■

Morton Kevelson, an electrical engineer by profession, devotes his spare time to the care and feeding of the C-64 and C-128, two Amigas and four children, not necessarily, he claims, in that order.

GAMES GALLERY

The latest in Origin's Ultima series of fantasy adventure games is rich in detail and challenge.

By DENNIS BRISSON

History tells us that the blind Greek poet Homer was the first great storyteller. His tales of Achilles in the *Iliad* and of Ulysses in the *Odyssey* were transmitted orally from generation to generation until they could be recorded.

The storyteller of the future will use a computer, not only to generate his tale, but also as the medium by which his story is conveyed.

Programmer Richard Garriott (aka Lord British) considers himself the storyteller of the 80s and 90s. His sentences are programming lines. He weaves the images—not through metaphors or similes—but through graphics on the screen. The tale unfolds—not chapter by chapter—but disk by disk. And the reader—er, computer user—plays an integral role in determining the character development and plot of the story.

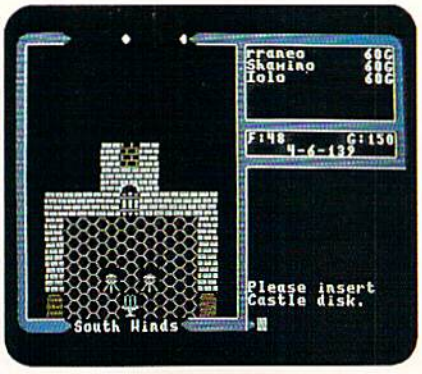

WARRIORS OF DESTINY

Garriott has just released Ultima V: Warriors of Destiny, his fifth in the series of fantasy role-playing adventure games from Origin. The game supports both 64 and 128 modes.

Ultima is not just a game, insists Garriott, who began programming the series in 1980. "The computer, which is my vehicle for telling a story, allows the user to interact with the story."

You'll find all the traditional elements of fantasy role-playing: creating a character, combat, keyboard-entered commands, gathering clues and objects to help solve the game, conversations with characters you meet. But in Ultima V, there's a lot more involved.

First, the attention to detail is incredible. If you pass by a mirror, your image is cast; your character also makes use of furniture and can play musical instruments. Ultima V takes advantage of the additional memory on the 128 with music befitting the location and situation. All these aspects of the game are integral to the plot of the story. "One of my goals," notes Garriott in literary fashion, "is to create a believable alternate reality through a willing suspension of disbelief."

Virtue, as well as strength, is necessary for success in Ultima V.

Second, the main character must rely as much on virtue and adherence to a code of ethics as on strength and skill to defeat his opponents. "World exploration and discovery are the main goals. Creating a character to fight monsters is secondary," notes Garriott.

Ultima VI, already in the works, will be the third game in the second trilogy (IV–VI). While the first trilogy (I–III) was a simple good-guy-vs.-bad-guy scenario, the second involves more intricate plot twists. Garriott's games place a high value on valor and honor. The key to winning the game is to answer correctly when faced with certain ethical and moral dilemmas (sort of like a medieval game of Scruples). While there are plenty of combat situations, virtues are just as important as skill, courage and strength. Your three main adversaries are cowardice, deceit and cunning, which, of course, can only be overcome by bravery (courage), truth and forthrightness, respectively.

Rich in detail, with many levels of challenge, Warriors of Destiny is not for the casual game player; it requires a sustained commitment. For example, the documentation states that there are "over 30 towns and dungeons to explore." I don't doubt it.

Four double-sided disks give you some idea of the hours and hours of game playing and involvement required to determine the whereabouts of Lord British in the vast Underworld and restore him as the rightful ruler of Britannia. You'll encounter scores of interactive characters—some will thwart your attempts, some will help you, and some are in need of your help—in many different settings in the vast world of Britannia. There are plenty of combat scenarios, but, as in Ultima IV, it takes more than defeating the bad guys to win in this game.

Although it's certainly not necessary to have played previous Ultimas, if you're familiar with the series, then you should feel right at home with Ultima V. The keyboard-entered commands are the same, but before you tackle this adventure, be sure to familiarize yourself with the manual and other support materials—including a cloth map of Britannia, which has become the Ultima trademark—that accompany this game. Garriott has added new magic spells, a more advanced weaponry system and even the Runic alphabet, which plays a part in solving this adventure game.

The software makes good use of the Commodore's impressive graphics and sound capabilities.

If you persist, you will eventually win at this game. But win or lose, you'll most of all be entertained and challenged by this latest version.

Ultima V represents Garriott's most ambitious achievement to date. Britannia is a complete world that lives in the mind of Garriott, who has successfully brought it to life on the screen for Ultima fans and dedicated role-playing adventurists.

TIMES OF LORE

Origin has also introduced an equally entertaining, although much less complex, adventure game called Times of Lore. It has no detailed command instructions to learn, no lengthy manuals to wade through, and no complex characters to create. Just boot up the disk and plunge into hours of fun.

The main feature of this game is its ease of use and immediate playability. Programmer Chris Roberts has devised an icon-based, menu-driven system that quickly gets you into the game. If you've never played fantasy games, then Times ►

UTILITIES UNLIMITED, Inc.

12305 N.E. 152nd Street
Brush Prairie, Washington 98606

WORLD'S BIGGEST PROVIDER OF C64/128 UTILITIES

Software Submissions Invited

We are looking for HACKER STUFF: print utilities, parameters, telecommunications, and the unusual.

We now have over 1,000 parameters in stock!

Ad copy by RWS Ind.

SUPER PARAMETERS 1000 Pack #1

Utilities Unltd has done it again!! We have consolidated and lowered the prices on the most popular parameters on the market . . . SuperParameters, now you can get 1000 parameters and our 64/128 nibbler package for just $39.95!!! This is a complete 10 disk set, that includes every parameter we have produced.

SUPER PARAMETERS 500 Pack #1 and #2

500 Pack #1 - $24.95 has the vintage parameters on it that no one else has. This pack comes in a 5-disk set.

500 Pack #2 - $29.95 has all the most current parameters on it. And put together as only Utilities Unltd. can. All Super Parameter Packs are completely menu driven, fast and reliable. Included on both 500 Packs is our state-of-the-art 64/128 Super Nibbler at no extra charge.

OVER 5000 UNITS SOLD.

IF ANYTHING CAN COPY EVERYTHING, THEN THIS IS IT!

SUPERCARD $44.95

Unlike our competitors, we at Utilities Unltd. have been concentrating all our time and effort in developing the latest technology, not on putting third party software in our product line. SuperCard is the product of all that effort. SuperCard is simply the most effective way to back up the latest software releases. It's fast (you can backup an unprotected disk in as little as eight, that's right — 8, seconds. SuperCard works with 1 or 2 1541s and, if you have one, a Ram expander. They say that imitation is the greatest form of flattery. Well, SuperCard is at the forefront, and on the cutting edge of this technology. The cheap imitations are already hitting the streets. There is even one well-known software developer that has produced similar hardware, and then suggests that you steal our software to make their board work. BEWARE. U.U.Inc. will see to it that our software does not work with that cheap imitation!!! U.U.Inc. guarantees that SuperCard will outperform any and all backup utilities on the market or we will gladly refund your purchase price. If there is something you are not able to back up, please call and we will let you know if SuperCard will do it.

THE FINAL CARTRIDGE III versus super snap shot

The Cartridge war heat up. Well folks, here's the real story!!! In their latest ad, our competition claims they are getting better reviews. Well, that's partly true . . . but mostly false. First of all, they are comparing reviews written about the old Final Cartridge and not the current version III. We at Utilities Unlimited Inc. are so sure that you would choose The Final Cartridge over that other one we make the following offers:

For those of you who bought the super snap shot believing that you were buying the best, then saw the Final Cartridge III, **we offer you $30.00 for your super snap shot, as a trade in for the BEST . . . The Final Cartridge III.**

Every Final Cartridge III now includes many features not found in super snap shot as well as our newest 64/128 nibbler and 100 Super Parameters.

(NOW W/CLOCK) Still only **$54.95**

SIMILAR PRODUCTS MAY APPEAR ELSEWHERE LATER; JUST REMEMBER YOU SAW THEM HERE FIRST!!

PARAMETERS CONSTRUCTION SET

The company that has **THE MOST PARAMETERS** is about to do something **UNBELIEVABLE**. We are giving you more of our secrets. Using this **VERY EASY** program, it will not only **READ, COMPARE** and **WRITE PARAMETERS FOR YOU**; it will also **CUSTOMIZE** the disk with your name. It will impress you as well as your friends. The **"PARAMETER CONSTRUCTION SET"** is like nothing you've ever seen. In fact you can even **READ PARAMETERS** that you may have already written; then by using your construction set rewrite it with your new **CUSTOMIZED MENU. DON'T WAIT** for months for that one special parameter: **WRITE IT!** **$24.95**

REMEMBER FOLKS, YOU SAW IT HERE FIRST!

(Another first!) THE 128 SUPERCHIP—A, B or C

A There is an empty socket inside your 128 just waiting for our **SUPER CHIP** to give you 32k worth of great **BUILT-IN UTILITIES**, all at just the **TOUCH OF A FINGER**. You get built-in features: **FILE COPIER, NIBBLER, TRACK & SECTOR EDITOR, SCREEN DUMP**, and even a 300/1200 baud **TERMINAL PROGRAM** that's 1650, 1670 and Hayes compatible. Best of all, it doesn't use up any memory. To use, simply touch a function key, and it responds to your command.

B Has super 81 utilities—a complete utility package for the 1581. Copy whole disks from 1541 or 1571 format to 1581. Many options include 1581 disk editor, drive monitor, Ram writer and will also perform many CP/M & MS-DOS utility functions.

C "C" is for combo and that's what you get. A super combination of both chips A and B in one chip, switchable at a great savings to you. **ALL CHIPS INCLUDE 100 PARAMETERS FREE!**

Chips A or B: **$29.95@** Chip C: **$44.95@**

SUPER GRAPHICS 1000 PACK

That's right! Over 1000 graphics in a 10-disk set for only **$29.95.** There are graphics for virtually everything in this package. These graphics work with Print Shop and Print Master.

LOCK PICK—THE BOOKS—for the C64 and C128

Lock Pik 64/128 was put together by our crack team, as a tool for those who have a desire to see the **INTERNAL WORKINGS** of a parameter. The books give you **STEP-BY-STEP INSTRUCTIONS** on breaking protection for backup of 100 popular program titles. Uses **HESMON** and **SUPEREDIT**. Instructions are so clear and precise that anyone can use it. ★**OUR BOOK TWO IS NOW AVAILABLE**★

BOOK 1: Includes Hesmon and a disk with many utilities such as: **KERNAL SAVE, I/O SAVE, DISK LOG FILE** and lots more, all with instructions on disk. A long-time favorite.

BOOK 2: 100 NEW EXAMPLES, Hesmon on disk and cartridge plus more utilities to include: **A GENERAL OVERVIEW ON HOW TO MAKE PARAMETERS** and a **DISK SCANNER.** **$29.95** each OR BUY BOTH FOR **ONLY $29.95**

Now with FREE Hesmon Cartridge.

V-MAX, RAPID LOCK DIGITAL SOLUTIONS™

ADULT GAME & GRAPHICS DATA DISKS

GAME: A very unusual game to be played by a very **OPEN MINDED** adult. It includes a **CASINO** and **HOUSE OF ILL REPUTE**. Please, you **MUST BE 18** to order **EITHER ONE.**

DATA ★: This **POPULAR** disk works with **PRINT SHOP** and **PRINT MASTER.**

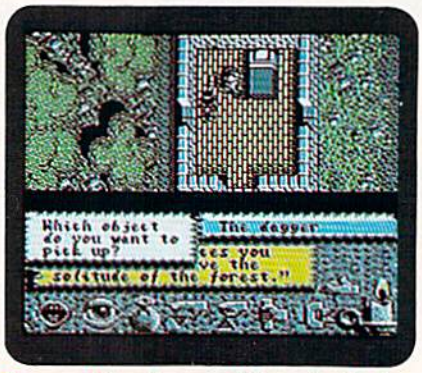

Now version 1+2 **$24.95** ea.

of Lore is a great introduction.

There's plenty of combat action, and it's completely joystick-operated, which makes for fast, enjoyable action. You choose one of three adventurers, who must mingle with the characters you encounter to learn of strange occurrences in the kingdom. Engaging the townspeople in conversation is easy with the icon system. There are five types of enemies you must defeat, and you must accumulate food, gold, magic potions and scrolls and other special objects to complete your mission.

Times of Lore is a good introduction to fantasy role-playing games.

Times of Lore successfully mixes elements of arcade and adventure; there's plenty of action here to keep your trigger finger happy.

If you've always been curious about role-playing adventures, but lacked the time or commitment to become involved, then Times of Lore is for you. Or, if you're making the transition from arcade play to role-playing games, then this is the game I'd highly recommend.

The graphics are impressive, the characters are enjoyable, the music is essential, the game play is exciting, but, best of all, the ease of use is a welcome feature. The novice adventurer, as well as the seasoned gamer, will enjoy this one.

Kudos to Chris Roberts and the Origin people for a delightful, yet challenging, game. If I had known fantasy role-playing was this painless, yet rewarding, I would have ventured into this enchanting world eons ago.

ORIGIN

With the release of Times of Lore, Origin sheds its image as a one-product company. Officials at Origin admit that Times of Lore represents the "broadest base appeal of any product we've put out." Recently named the best publisher at the Computer Game Developer's Conference, Origin promises some exciting new entertainment packages in the next two years.

"We're sitting on a goldmine of diversified new entertainment software titles," notes president Robert Garriott. Plans call for about half-a-dozen new titles each year. *(Both Ultima V ($59.95) and Times of Lore ($39.95) are distributed by Broderbund Software, 17 Paul Drive, San Rafael, CA 94903.)* ■

Dennis Brisson enjoys game playing as a relaxing change from his labors as RUN*'s Editor-in-Chief.*

ULTIMA V GAME-PLAYING HINTS

ON OUR LAST VISIT to Britannia, we had an opportunity to visit with Lord British himself, who offered us the following game-playing hints.

1. — Beware the Shadowlords. Avoid these mean dudes at all costs. In fact, Lord British suggests that if you encounter one in a city, you should immediately leave and move on, or camp outside the city until the Shadowlord has left. Fighting these nasties in combat is futile, anyway. It will take more than strength and skill to defeat them.

2. — When he isn't out destroying evil, Lord British occupies a private room in his castle. By obtaining some magic keys during the course of the game, you will be able to enter his chambers. However, really clever players have found that you can gain access by moving the cannons located along the walkway and blasting the door down.

3. — Once you're in his room, find the harpsichord and play the magical tune that is listed in the play book. One of the characters you meet will teach you how to play. Once you have played the tune, "something wonderful will happen," according to Lord British.

4. — When they need a change of scenery from their underworld abode, the evil Shadowlords hang out in a secret surface-world location, which you must eventually visit. Known only to Lord British and his most loyal followers, this hideaway can be reached by sailing into Last Hope Bay and landing at the southernmost tip. Using climbing gear, you will scale a series of mountains, all the while heading south until you reach Stone Gate, where the Shadowlords reside.

5. — Lord British emphasizes that only by conversing with the different characters you meet and piecing together the clues they provide will you be able to complete your mission. Sometimes, you'll encounter a shy character who will not divulge important information in your initial encounter. Be persistent, because he or she may be more conversant on a second meeting.

Remember, whatever happens in your journey, don't despair. Be sure to read the supporting material that accompanies the disks and, above all, be true to the Avatar ethic. R

TIMES OF LORE GAME-PLAYING HINTS

1. — Even the longest journey begins with a first short step, so, to start you on your way, be sure to talk with the monk at the inn in the capital city of Eralan for your first mission instructions.

2. — On your second mission—to recover the Tablet of Truth from Heidric's castle—talk to the inhabitants of Ganestor to learn of a secret passageway into the castle. The object of your quest is located in one of the rooms on the first floor.

3. — On one of your other missions—to kill an evil Lyche—you find out that the only way to do so is to douse him with holy water, which can be purchased from Friar Kaine of Rhyder.

4. — Several times, when further travel seems impossible (in a dungeon or corridor), locate a lever in the wall, or push on pressure plates, to disclose a secret passageway.

5. — Among the possessions you accumulate in the game are the blue scroll, which temporarily freezes character movement, and the red scroll, which kills all hostile creatures on the screen. Also, keep a sharp lookout for the ring of invisibility, the boots of speed, the scroll of transportation, the magic axe, the potion of blinking and the dagger.

6. — Only by conversing with the townspeople and other characters will you accumulate valuable keywords to use in future conversations. R

GEOWATCH

Graph, map, plot, design, plan, create, depict. What do all these verbs have in common? geoChart!

By ELLEN RULE

I'VE ALWAYS KNOWN THAT Uncle Sam takes a bite out of my paycheck, but I never realized how big a slice it is until I saw it detailed in pie-chart form! A pie chart is just one of nine types of graphs available in Berkeley Softworks' latest offering, geoChart, for use within GEOS 64 and GEOS 128 in 40-Column mode.

You're probably asking yourself, "What would I do with a utility like geoChart?" Well, I select any line from my budget spreadsheet and use it to view the trends of my electric or phone bill, grocery costs or any other variable expense. There are a number of other possible applications for graphs or charts: displaying the direction of school grades, illustrating science and math projects or analyzing the proportion of interest to principal in home mortgage payments.

CHARTING THOSE GRAPHS

Creating graphs with geoChart is done in either Chart mode or Data mode. When you first enter geoChart, you view a default column chart in Chart mode. Entering Data mode requires pasting in a text scrap of your data through the use of the drop-down menu or the Commodore/T key combination. You can construct the text scrap within any version (64 or 128) of geoWrite, geoFile or geoCalc, or you can do it within Note Pad, version 2.0, which is included on the geoChart disk. Because you can keep only one text scrap on a disk at any one time, the Text Manager, found on your GEOS disk, is also useful here.

In order to utilize geoChart to its fullest, it's important to have a good grasp of the terminology. (Terms are explained in the introductory chapters, as well as in Appendix A, of the manual.) The data in a text scrap must be organized in a specific way, and geoChart's vocabulary is related to that organization.

GeoChart interprets non-numeric data entered in the upper-left corner of the text scrap as the chart's title. The column headings in your text scrap are designated as the "series names." The "category names," selected from the labels of the rows down the left side of your scrap, are the basis for measurement. (Once the chart is formatted, you can edit or delete any of the text data.)

Your text scrap can contain up to 50 columns and 25 rows of values. After geoChart partitions the data, you select four sets of values, "data series," for each chart, with up to 20 values in each series. An intuitive method of selection lets you highlight squares from a grid icon that is shaped to match your scrap. You can then exit Data mode by clicking on the Chart icon.

Once you have entered the data into geoChart, you can manipulate it in many different ways in Chart mode. You can change the chart type and the numeric range of the data you want displayed by using a drop-down menu and without re-entering the data.

A CHART BY ANY OTHER NAME...

GeoChart produces nine chart types: the familiar pie, bar and area, as well as point, line, column, unibar, scatter-point and scatter-line graphs. (In case your high school algebra is a little rusty, Appendix C in the manual gives chart samples.) You can add, change or delete text of the chart title, legend and axis labels, and you can also alter the fonts, point sizes and styles of the text areas. Simply re-enter Data mode to select different data sets at any time.

Markers represent your data values. If the marker is a point on a line or point graph, you select its shape from four different styles. If the marker is a filled shape, as in a pie or bar chart, 32 fill patterns are at your disposal.

Axis values can include negative numbers, and the formats of these values—percentage, dollar amounts, and so forth—are under your control. Also at your discretion is the choice of grid style for those charts that incorporate a background grid.

When the chart is finished, you can print it directly to any GEOS-compatible printer using a standard printer driver, or you can create a photo scrap to be pasted into another document. Berkeley has added an interesting feature here. The first option given when you select "copy" from the Edit menu creates a full-size scrap of the screen, useful for pasting into geoPublish. However, the scrap is too big if you want to paste into geoWrite or geoPaint.

Anticipating this, geoChart's creators have given you the options "to geoWrite" and "to geoPaint"; these build two different sizes of condensed photo scraps that can be imported, without resizing, into the corresponding application. (GEOS 2.0 owners might find that attempting to import a full-screen scrap into geoPaint by scaling and smoothing yields less than satisfactory

results when text items are present in the chart.) Since only one photo scrap can reside on your disk, have the Photo Manager handy and paste the scrap into a photo album without exiting from geoChart.

Users familiar with other GEOS applications will intuitively be able to update, recover, rename, print or conduct other file-management operations within geoChart. For those with less GEOS experience, Chapter 7 in the documentation, entitled File Management, details the procedures.

Data Ought To Do It

Data preparation is the most complicated aspect of geoChart. Fortunately, the manual is quite detailed, and the results are worthwhile. Chapter 2, Learning geoChart, has a hands-on, step-by-step tutorial that guides you through the preparation of your first chart. The individual components of row and column labels and title and data sets are reviewed for your convenience.

The manner in which the text scrap is contructed depends on your source—geoCalc, geoFile, geoWrite or Notepad 2.0. It's generally accepted that it's best to store and manipulate large amounts of numeric data through a spreadsheet like geoCalc. In this case, to create a text scrap, you simply highlight the areas you want to export, then select "copy text scrap" from the Options menu.

On the other hand, you might have stored mixed data (text and numbers) in geoFile, the GEOS database. For instance, text information regarding your favorite ball players, along with their playing statistics, provides material suitable for use in geoChart. Imagine how snappy your school paper or bowling league's newsletter would look with the scores of your star players compared and contrasted in a graphic chart!

At first, I experienced some frustration while attempting to copy a text scrap from geoFile. I resorted to my geoFile manual to find that I had to be in Form-Design mode in order to cut a scrap that was ultimately geoChart-compatible. It seems that the pre-release version of the geoChart manual, from which I am working, neglects to mention this small fact. That problem solved, I found that the geoFile data produced an acceptable chart.

As mentioned, a text scrap can also be created within geoWrite or Notepad 2.0, but I tend to think of this as the "quick and dirty" method of data entry, for use when the figures to be charted don't already exist in usable form. Titles, headings and row labels are laid out in the prescribed configuration, using tabs or commas to separate the items.

In Conclusion

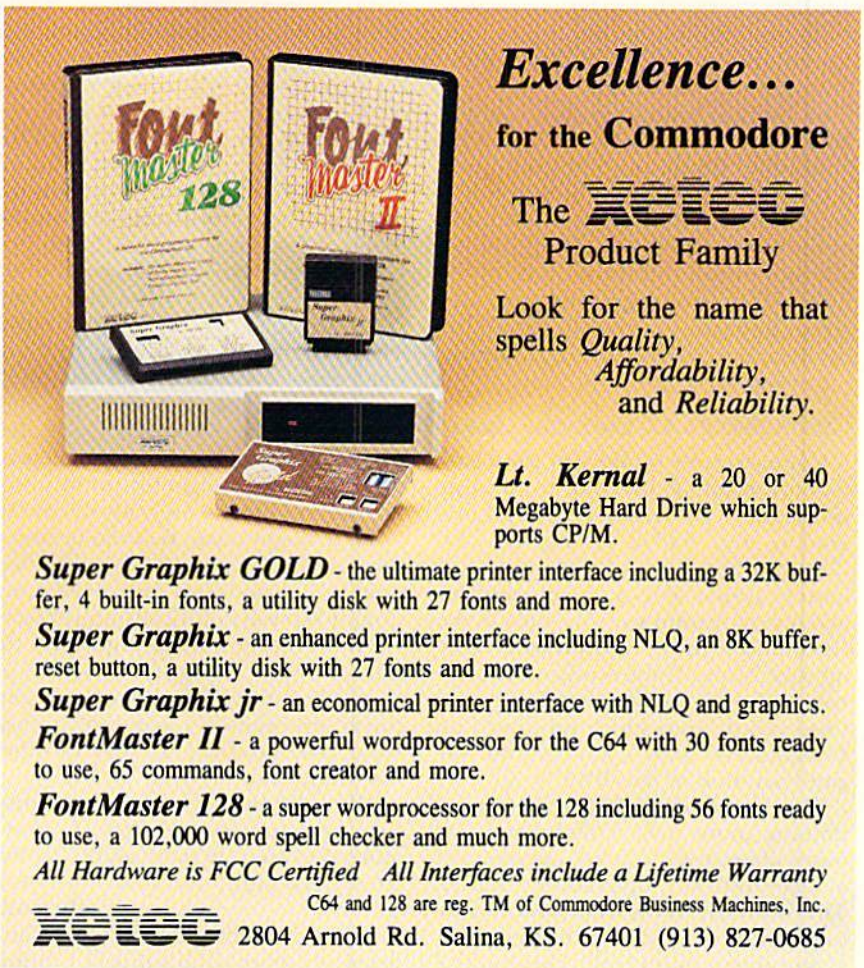

When preparing data for entry into geoChart and deciding which chart to use, give careful thought to exactly what it is you want to depict. For example, do you want to contrast two sets of data, such as the total cost of a car with two different interest rates or payment terms? In this case, because the two items are selected as the data sets, a bar graph might be utilized.

Or perhaps you want to see the relative proportions of your monthly expenses. I find that lumping items together—utilities and credit card payments—in a pie chart gives me a clear view of my financial outlay. In other words, the data that's suitable for one type of chart might not be right in another.

While preparation of data involves some effort and forethought, the resulting versatility makes geoChart a one-of-a-kind program. Aside from GEOS itself, little investment is required, and owners of any version of geoFile, geoCalc and geoWrite can make the most of these applications.

The manual's detailed explanations, tutorial section and appendices are well written and well organized. The output is visually appealing and easily integrated into the other GEOS applications. Number-crunching software is hard to get excited about; geoChart's performance and adaptability make it an uncommon exception, especially for $29.95. ■

This month's geoWatch columnist, Ellen Rule, is a psychiatric R.N. who finds time not only for extensive user-group involvement, but also for a home-based business, Home Computer Resource. Send in your questions or comments to geoWatch, RUN Magazine, 80 Elm St., Peterborough, NH 03458.

TELECOMPUTING WORKSHOP

This month we spotlight CompuServe, America's largest telecommunications network.

By LOREN LOVHAUG

MY SERIES ON THE THREE major online networks concludes this month with a look at CompuServe, the oldest and largest consumer telecommunications network in the United States.

Throughout this series, I've resisted the temptation to simply list the huge number of services offered by any of the networks. Instead, I've related my opinions by paying particular attention to the quality of each network's Commodore 64 and 128 support.

I believe that in the interest of fairness and journalistic credibility, I should once again mention my familiarity with both GEnie and Q-Link: I have served as a SYSOP on both networks. However, during my research, I've been very careful to use tangible evidence in formulating my opinions and have tried to eliminate any subjective bias.

In terms of online services, CompuServe is a vast network, much larger than either GEnie or QuantumLink. It is also more expensive, with access fees that run significantly higher than those of the other two. Due to CompuServe's size and number of services, there are many reasons you might choose to subscribe; however, I'm sorry to report that excellence in Commodore eight-bit computer support is not one of them.

CompuServe's Commodore Area

CompuServe's support of the Commodore eight-bit line can be seen as divided into two distinct parts: a Commodore area and a Transactor area. Commodore—the corporation—is loosely responsible for the messages and text in several sections, such as the Commodore Service Forum and Commodore News. These sections are remnants of Commodore's "official" online support area, which was based on CompuServe until QuantumLink began operation in late 1985.

The Commodore Service Forum is nothing more than a set of message bases where users can ask questions of a lone "official" Commodore staffer. This is similar to the Commodore message base I referred to in my December 1988 column on Q-Link. There is one notable difference, however: On CompuServe, there does not appear to be anyone from Commodore's engineering staff correcting the official voice's technical errors. Without such a presence, the user gets only vague and, far too often, inaccurate responses from someone whose expertise is in administration, and not in the actual usage, programming or maintenance of Commodore equipment.

The Commodore News section contains a series of text files, which can be read while online, and a small software update area. Included are sections on educational resources, Commodore press releases, user group information and a service-center directory. While these topics sound exhaustive, the text is terribly dated and of limited value. For example, the educational resources section contains lists of software for older computers like the PET and VIC-20, and several of the named software producers have been out of business for years. This is also apparent in the user-group and service-center listings.

Along similar lines, the software update area features a two-and-one-half-year-old patch program to update CP/M 3.0 on the C-128, a program that was rendered obsolete over a year ago. It also contains a simple Xmodem terminal package for the C-64 and C-128 that dates back to the days when Xmodem in the Commodore eight-bit world was a novelty and not the necessity it is today.

Some might argue that the information's age isn't CompuServe's fault, but rather Commodore's for abandoning CompuServe as its official online home. I believe that is a naive argument. Ultimately, what is on CompuServe is CompuServe's responsibility, and pertinent information could easily be obtained and updated by sources other than Commodore itself.

The most important factor national telecommunications networks have going for them is their ability to distribute the latest and most up-to-date information faster and more efficiently than any other medium. In this regard, at least in its eight-bit support, CompuServe is not taking advantage of a traditional network's strength.

CompuServe's Transactor Area

After Commodore opted to leave it for Q-Link, CompuServe contracted with Transactor Publishing to fill the Commodore computer support vacuum. (*The Transactor* magazine has for years been renowned for its quality and its technical publishing.) Ideally, this should have meant that CompuServe would become *the* online resource for Commodore programmers and users with technical prowess.

Unfortunately, that *creme de la creme* idea has never materialized. Due to financial pressures and the increased demands SYSOPing places on an overworked staff, many of the principal authors and program contributors to *The Transactor* really don't spend much time online (even though they're listed as the primary managers of the online areas). This is really unfortunate, because those individuals are extremely knowledgeable and have a lot to offer. As it stands now, the assistant SYSOPs who do manage the area have little or nothing to do with *The Transactor*, nor do they sport the technical expertise of the magazine's authors and contributors.

There are three topic areas in the Transactor section: Communications, Programming and Arts and Games, and the information presented within them is generally informative and accurate. In addition, the assistant SYSOPs seem fairly good about answering questions in a reasonable amount of time.

Interestingly enough, I did notice that the response trees within these sections seem to be more "chatty" than those found on other networks. The informality of the dialogue between the SYSOPs and the user community produces a "homey" feeling, more indicative of the rapport one finds on many a local BBS.

The positive side of this is that the users and SYSOPs seem to have a good sense of community and an openness that fosters effective communication. On the negative side, this informality

does, at times, lead to discussions that get sidetracked, overly personal and expensive to muddle through.

The download areas within the Transactor sections are similar to those found on Q-Link and GEnie, although they are smaller and seem to lag behind as far as getting the "latest and greatest" public domain programs.

What the CompuServe download areas have going for them is that many of the excellent programming examples and demonstrations from the magazine are online, and can be downloaded for those programmers who are interested and would rather not have to type them in.

Overall, CompuServe's software is complete and well thought out. Like GEnie's system software, it's computer independent, so the more sophisticated your terminal package, the more you'll get out of it. The message editors and Email systems are first class in power and sophistication, but, also like GEnie's, they require study and practice to use them effectively and efficiently.

Although I must admit I'm not overly impressed with CompuServe's C-64/128 support, I can say that the quantity and quality of its other services (financial, reference, shopping, and so on) are first rate. If you're looking for services other than for the C-64 or C-128, you may well be pleased with CompuServe. However, if your main interests are C-64 and C-128 support, I think you'd be better served on either Q-Link or GEnie. ■

You can write Loren Lovhaug care of Telecomputing Workshop, RUN Magazine, 80 Elm St., Peterborough, NH 03458.

You can also send him electronic mail on QuantumLink (LOVHAUG) or GEnie (Sparrow.J.).

RS232 Line Surge Protector	SSP	$14.95
Parallel Line Booster	PLB	$24.95

BLASTER C64, C128 $5.95
Add automatic firepower to your games, plug-in module that makes the fire button of your joystick have machine gun action. Adjustable speed control.

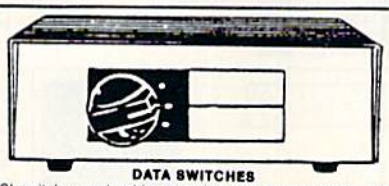

DISK DOUBLER $6.95
The original! All metal Cuts an exact square notch in the disk. Same spot every time!

TO ORDER: VISA, MASTER CARD, money orders, or check (allow 21 days for check to clear) accepted.

SHIPPING: $3.00, power supplies $4.00, power center $5.00. $3.00 service charge on C.O.D. (cash only) plus U.P.S., APO, FPO, etc., no extra charge.

TERMS: All sales are final. Defective items replaced or repaired at our discretion. RA# REQUIRED. Price and availability subject to change.

DATA SWITCHES
VSI switches end cable swapping, share equipment. Need extra cables, we stock a broad selection.

- ONE YEAR WARRANTY, Deluxe All Metal Case
- Compact Design, Rotary Switch
- Full Shielding, Exceeds FCC Requirements

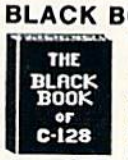

AB all models	$29.95
ABCD all models	$39.95
Switch models available:	
8 Pin Mini Din, 6 Pin Din, DB9, Parallel, Serial	
Aa x Bb (crossover), Parallel or Serial	$44.95

Apple cables also available.

NEW...MODEM LINK by VSI $15.95
This is the LINK from a Hayes compatible modem to your Commodore. Emulates Hayes or a 1670. The LINK connects to the user port, and has been tested in 1200 or 2400 baud. Compact, full plastic case, why pay more.

NEW...THE BUTTON by VSI $8.95
The BUTTON is a deluxe reset for the C64. Plugs into the user port, don't worry the port is duplicated on the outside edge of the case. Comes in a compact case, 3x1½ inches. do not confuse the C64 with the newer 64C.

BLACK BOOK of C128 $15.95

The best friend a C128 user ever had ...Includes C-64, C128, CPM, 1541, 1571. 261 pages of easy to find information. 75 easy to read charts and tables. The Black Book of C128 is very much like a dictionary, always ready to answer your questions.

COOLING FAN
Heat is a #1 enemy to your disk drive. Reduce bad loads and costly repair bills with a fan, keep your 1541 or 1571 cool. Quiet, surge and spike protection, EMI filtering

VOICE MASTER JR. $37.95
Turn your computer into a talking and listening servant. Get speech and voice recognition in ONE product. Easy to use, write music by whistling a tune. Unlimited uses for fun, education, or business.

POWER CENTER WAS $59.95
NEW LOW PRICE $49.95

The POWER CENTER provides individual control of up to 5 components plus master on or off switch.
System protection: EMI/RFI filtering, surge and spike protection, 15 AMP breaker, heavy duty cable, 3 prong plug. Lighted rocker switches, all steel case, size: 1 3/4 H x 12 1/4 D x 15 W.

OMNITRONIX INTERFACES

HOT SHOT PLUS $64.95
Printer interface, 8K buffer, expandable to 64 K. 6 fonts plus editor in ROM, prints double or quad density, CPM selection.

DELUX RS232 INTERFACE $39.95
Connects standard modems or RS 232 accessories to the C64, C128, 64C, SX64, VIC20, or Plus4.

SERIAL PRINTER INTERFACE $64.95
Use a standard RS232 type printer on the Commodore. Conncets to Serial Bus (6 pin).

IBM to CBM Adaptor $37.95
Now use your C64 compatible printer on a PC compatible. Includes a specially designed cable and software.

JOYSTICK REDUCER $3.95
Every once in a while, our buyers find one of those odd gadgets they just can't resist. The Joy Stick Reducer is odd and low-priced. It allows one joystick to be plugged into both ports at the same time. I know you are saying, what's it good for. Stop and think, how many times have you had to try both ports before finding the right one?

APROSPAND-64
Give your C64 or 128 full expandability. This skillfully designed expansion unit plugs into the cartridge port, this gives you 4 switchable (single or in combination) cartridge slots, includes fuse protection and a reset button!

$26.95

12 PLUS 12 in. cartridge port extension **$19.95**

SPECIAL PURCHASE
Chrome plated, heavy duty universal printer stand. Rubber feet, allows front, back, or bottom feed. For 80 or 132 column printers. Original price $24.95

Now $12.95

COMMODORE CLINIC

Finding Commodore REUs and 1571 disk drives; disabling run-stop and restore; and an error in Crazy Caverns.

By LOU WALLACE

Q *I've been searching for the 1750 RAM Expansion Unit, but the computer supply companies tell me it's no longer available. Is there an alternative?*

—MAUREEN BRYSON
LAS VEGAS, NV

A The 1750 REU is still being made and sold and is becoming more popular (especially with GEOS users, where it's almost essential). At the World of Commodore show held in Philadelphia last November, I asked a Commodore executive about the dearth of REUs and was assured the company has resumed manufacturing them, including the 512K 1750 and the 256K 1764. Berkeley Softworks (publishers of GEOS) tell me they are now selling the REUs directly, and Briwall, one of *RUN*'s mail-order advertisers, just got in a shipment of 1750s.

Q *I have a C-128 and a 1571 drive, and I plan to add another 1571, but I can't find one anywhere. I did find a 1541-II drive, but didn't know if it would give me the same speed as the 1571. I've also thought of getting a 1581 drive, but can I copy files to it from the 1571? Will commercial productivity software work with the 1581?*

—BOBBY WHITE
COLUMBIA, TN

A Commodore tells me they're still producing the 1571 drive, but only enough to meet anticipated demand. However, if you shop around, you should be able to find one.

The 1541-II will not give you the speed or storage capacity of the 1571. It's just the latest version of the 1541, designed for the C-64, and it will be just as slow as your old 1541. Avoid using it with the 128.

The 1581 works very well with the 128, offering faster disk access and 2½ times the storage capacity. There are a variety of file-copy programs that copy files from the 1571 to the 1581. As for commercial programs working with the 1581, it all depends on how the programs were written. If a program uses just the standard CBM DOS routines, you shouldn't have any trouble, but if it expects the directory to be at track 18,0, you'll have problems, because the 1581 stores its directory information in a different location.

Q *Will* RUN *release updated versions of RUN Script 128 and RUN Term 128 that support the 1581 disk drive and 1750 RAM Expander?*

—R. E. THOMAS
QUEENS VILLAGE, NY

A The latest version of RUN Script 128 is on the Productivity Pack III disk. This is the word processor we use in our offices, and the only drive I use it with is the 1581. RUN Script does not use the 1750 REU to store longer documents in memory. However, it does work well with the latest release of RAMDOS 128 RAMDisk software, from Commodore.

The latest release of RUN Term 128 is on the new RUN Works disk. It supports many drives, including the 1581. It also uses an REU for capturing text, giving you an awesome 512K ASCII capture buffer with the 1750. (RUN Term 128 also supports the 1700 REU, and the new RUN Term 64 on RUN Works supports the 1764 in the same way.)

If you're interested in either of these disks, call the ReRUN order line at 1-800-343-0728.

Q *I use a C-64, and on power-up, the screen seems to be in Multicolor mode and all the characters keep changing colors. Loading a game produces tiny color blocks on the screen where blue should be. What's wrong?*

—JAMES HATCH
HAINES, AK

A The most likely culprit is a bad VIC chip. Since the VIC generates all the text, color and graphics on your 64, you often get treated to a light show instead of the normal blue screen when the chip goes bad. One went bad on me, and the sprites left trails on the graphic screen—a feat engineers tell me is impossible!

Have a service center check it out. A VIC chip is fairly easy to replace, and should cost around $40, depending on the price of the replacement chip.

Q *I want to disable the run-stop and restore keys to keep users from getting out of my Basic programs. Is there a way to do this?*

—JAMES WATSON
ATLANTA, GA

A It's as easy as adding two Poke commands. To disable the run-stop and restore keys, use:

```
POKE 808,234
```

To re-enable them, add this line:

```
POKE 808,237
```

Q *I typed in both the Crazy Caverns* (RUN, *December 1988) and Brickout! (December 1987) programs, using the Checksum program to catch mistakes, and all the values check out right, but I can't get the programs to run.*

—ELLEN ALLEYNE
HOLLIS, NY

A Possibly our fault. The program was modified before publication, but not the documentation. In the little boot program, line 20 should read SYS 16384. Also, when typing " + CAVERNS ML ", be sure you put a space between the L and the double quotes. When typing in hex loader listings, of course, be sure you include all the spaces in the Data statements. If you leave out spaces, the checksum numbers will match, but the program won't work properly. ■

Do you have a problem or question about your Commodore computer system, software or programming? Just send your questions to: Commodore Clinic, RUN Magazine, 80 Elm St., Peterborough, NH 03458.

Announcing a Special Software Offer From *RUN* Magazine

GREATEST HITS VOL. I

RUN Magazine's editors have compiled a disk with 12 of the best programs published on our ReRUN disks. These outstanding programs are a "must" for the software library of all Commodore 64 and 128 users. GREATEST HITS VOL. I includes the following programs:

PROGRAM TITLE	DESCRIPTION
► HOME RUN DERBY	One or two players can test their batting and pitching skills
► SONGFEST	Compose songs and music with this keyboard program
► PULSING PICTURES	Create the illusion of waterfalls, spinning wheels and a variety of other moving patterns
► STACK	The famous "Towers of Hanoi" game with four levels of difficulty
► AUTORUN	Create self-running programs that automatically begin execution after loading
► AUTONUMBER	Automatic line-numbering utility
► LABEL MAKER	Create and print out multiple copies of mailing labels
► ARITHME-SKETCH	Great educational programs for elementary school students
► MURDER BY BYTE	Find out who committed the crime in this colorful "whodunit" for your 128
► DISK KEEPER	Maintain your disks with this handy all-purpose program
► NEEDLEGRAPH	Let your computer help create needlepoint and other design work
► HOME INVENTORY	Keep track of your household inventory of valuables on your C-64 or 128

INCLUDES DISK-BASED DOCUMENTATION

PRICE INCLUDES POSTAGE AND HANDLING
For foreign airmail, please add $3.95

Learn To Walk Before You RUN

WE RECEIVE MANY LETTERS from new Commodore owners who want to type in program listings from *RUN* and need help in getting started. To answer many of the questions novice users have, we present the following guidelines.

1. First, keep in mind that as a beginner you should enter only short Basic programs. Avoid machine language listings and lengthy Basic programs until you get the hang of what you're doing.

2. To help you catch mistakes in typing in listings, we publish *RUN*'s Checksum program elsewhere in this issue.

3. If you intend to save the program you're typing in on a brand new disk, you must format that disk. To do this, insert the disk in your drive and type:

```
OPEN15,8,15 <press return>
PRINT#15,"N0:NAME,##" <press return>
```

The ## is a two-character identifier that can be any combination of letters or digits. NAME can be any title for the disk that you choose, as long as it's 16 characters or less.

After entering the above lines, wait for a few minutes while the disk spins inside the drive. When the disk stops, the formatting is done. Then type:

```
CLOSE15 <press return>
```

In 128 mode on a C-128, you can shorten this procedure by typing:

```
HEADER "NAME,##" <press return>
```

Caution: The formatting process erases any material already on the disk, so if you're formatting a used disk, make sure it doesn't contain any programs you want to keep. See item 11 below, on reading the disk directory, if you need to find out what's on the disk.

4. Before you start typing in a program listing, your computer's memory needs to be empty. To make sure it is, turn the computer off, wait a few seconds, and turn it on again.

5. As you type in the listing, remember to press the return key after typing each line. This enters the line into memory.

6. If you want to review what you've entered, type LIST and press the return key; all the lines you've entered will scroll by. You can slow the scrolling on the C-64 by holding down the control key, and on the C-128 by pressing the no-scroll key. To view certain specific lines, type LIST, followed by the line numbers you want; then press the return key. For example, LIST 10–50 displays lines 10 through 50, and LIST 20 displays only line 20.

7. If you find an error in a line, delete the incorrect characters with the insert-delete key, then retype that portion and press return to enter the new line in memory.

8. Be sure to save the program to disk fairly often during the typing process. Otherwise, you could lose all your work if a power glitch wipes out your computer's memory. To save a partial or complete Basic program listing, type:

```
SAVE "NAME",8 <press return>
```

In 128 mode on a C-128, you can press F5, type in NAME and press the return key. Here, NAME is the filename you want the program to have, not the disk name you used when formatting.

Each time you save a revised program to the same disk, you must change its filename, or a disk error will occur, even if only one character is changed. An easy way to vary the filename is by adding version numbers to the end of the basic name (Program.1 and Program.2, for example). The numbers will also tell you which version is the latest.

9. If you wish to erase (scratch) unwanted programs from a disk, type:

```
OPEN15,8,15 <press return>
PRINT#15,"S0:filename" <press return and wait a few seconds>
CLOSE15 <press return>
```

In 128 mode on a C-128, you can type:

```
SCRATCH "NAME" <press return>
```

Be sure not to erase the final version!

10. Always save the final version of a program to two disks, so you have a backup copy in case one of the disks gets damaged. When saving to two different disks, you can use the same program name in each case.

11. To view a complete list of the filenames on a disk (i.e., read the disk directory), type:

```
LOAD "$",8 <press return>
LIST <press return>
```

In 128 mode on a C-128, you can just press F3.

12. When you know what program you want to load, next make sure you know *exactly* how its filename is spelled in the disk directory, including punctuation, special characters and spaces. A mistake in the filename will keep the load from working.

If the disk directory is still on the screen when you enter the Load command, you can refer to that for the spelling. If the directory will be gone from the screen by the time you enter the Load command, jot down the exact spelling of the filename for reference. Once you're sure of the filename, load the program by typing:

```
LOAD "NAME",8 <press return>
```

In 128 mode on a C-128, you can just press F2, type in the filename and press the return key.

13. After you've loaded the program, enter RUN to use it. ■

RUN's Checksum

TYPE IN *RUN*'s CHECKSUM, which serves for both the C-64 and for the C-128 in either 40- or 80-Column mode, and save it to disk before running. When typing in a program from *RUN*, first load and run *RUN*'s Checksum. The screen will display a SYS number that deactivates and reactivates the Checksum. Always disable *RUN*'s Checksum before attempting to run another program. Note: You can abbreviate Basic keywords; spaces affect the checksum only when within quotes; and the order of characters affects the checksum.

With this new version, when you press return after typing in a program line, a one-, two-, or three-digit number from 0 to 255 appears in the home position. If this number matches the checksum value in the program listing, the line is correct. If the number that appears *doesn't* match the checksum value, compare the line with the magazine listing to find your error. Then move the cursor back up to the line and make your corrections. Now, after you press return, the correct checksum value should appear. Continue entering the listing until all the lines have been correctly typed. Then deactivate *RUN*'s Checksum, using the SYS number. Save the finished program.

All the graphics and control characters in the listings in *RUN* have been translated into understandable key combinations. They are the instructions you see inside the curly braces. For example, {SHIFT L} means you hold down the shift key while you press the L key. You do *not* type in the curly braces. What appears on the screen will look quite different from what is designated inside the braces. Here are some more examples:

{22 SPACEs}—press the space bar 22 times

{SHIFT CLR}—hold down the shift key and press the clr-home key

{2 CRSR DNs}—press the cursor-down key twice

{CTRL 1}—hold down the control key and press the 1 key

{COMD T}—hold down the Commodore logo key and press the T key

{FUNCT 1}—press the F1 key

{5 LB.s}—press the British pound key (*not* #) five times

Listing 1. *RUN*'s Checksum program. This program is available on *RUN*'s BBS for users to download.

DEALERS SELL

Selling *RUN* will make money for you. Consider the facts:

Fact #1: Selling *RUN* increases store traffic—our dealers tell us that *RUN* is the hottest-selling computer magazine on the newsstands.

Fact #2: There is a direct correlation between store traffic and sales—increase the number of people coming through your door and you'll increase sales.

Fact #3: Fact #1 + Fact #2 = INCREASED ALE, which means money for you. And that's a fact.

For information on selling *RUN*, call 1-800-343-0728 and speak with our Direct Sales Manager. Or write to *RUN*, Direct Sales Dept., 80 Elm St., Peterborough, NH 03458.

Program computes general numeric solution to electronic circuit of up to 40 nodes and 63 branches. Branches may contain resistors, capacitors, inductors, current sources, voltage sources or 4 types of controlled sources. Computer displays node voltages, branch voltages, currents, powers and power factors. Step function of branch parameters or frequency with graphic display of results. Menu controlled and user friendly.

MARCH

COMING ATTRACTIONS

RUN PAINT—
This type-in program is a full-featured paint-and-draw program that includes an easy-to-use pop-down menu system and lets you draw in either Multicolor or High-Resolution mode. With more options and tools than most commercial programs, RUN Paint will suit the needs of experienced and novice "artists" alike. For both the 64 and 128.

SERVICE POLICY—
What do you do when your Commodore 64 or 128 breaks down? We hope this never happens to you, but if it does, you'll know how to handle the situation after reading next month's article on getting your computer fixed.

TAX PROGRAMS—
Just in time to help you with the preparation of your taxes, we'll take a look at the software programs that assist you in readying your statements for the IRS.

RERUN PREVIEW—
Here's the lineup for the January–February ReRUN disk: **2001: A Calendar Program (C-64)**—Keep your affairs in order; **Multitasking Comes to the C-64**—Juggle three programs at once; **Raising Rainbows (C-128)**—Try your skill at growing a rare orchid; **Screen Basic (C-64)**—13 video commands at your service; **Address, Please? (C-128)**—Find your friends fast; **Chummy Checkers (C-64)**—A new twist to an old game; **Program Your Mouse and RAM Expander (C-64 or C-128)**—Spice up your programs with speed and ease; **Trace the Light Fantastic (C-64)**— Nothing to do? Let your monitor mesmerize you; **A Lovely Idea (C-64)**—Computer-generated valentines to send and exchange; plus a bonus program!
