Taking your 64 and 128 into the 1990's

CMD HardDrives

- Four modes of operation: 1541, 1571, 1581 emulation modes for compatibility and Native mode with up to 16 Mb partitions.
- Built-in *GEOS™ and *CP/M™ compatibility.
- Standard capacities of 21.5, 48.6 and 104 Megabytes with custom capacities in excess of 200 Megabytes.
- Serial bus interface supports Standard Serial as well as high-performance Fast Serial and JiffyDOS protocols.
- 3 1/2" SCSI technology allows for quiet, cool reliable operation in a compact case about the same size as a 1581 drive.
- Can be interfaced with Amiga, IBM - compatible and MacIntosh computers, allowing you to take it with you when you upgrade.
- Built-in real time clock for time and date stamping of files.

Our goal was to design a reasonably priced drive which was easy to use, and we've done just that. We challenge you to compare our HD series to any other hard drives ever available for the 64 and 128. CMD HD hard drives utilize the latest hardware technology and operate using the most innovative disk operating system ever made available to 64 and 128 owners. CMD engineers were inspired to create a hard drive which overcomes the problems inherent in earlier designs. As a result, the evolution of new features and a level of compatability previously thought of as impossible in any disk drive has become reality. Features such as the SWAP function allow you to operate software which only recognizes a specific device. The built-in SCSI controller allows expansion of your system to over 4 Gigabytes of storage, as well as allowing connection to other types of computers. So while other companies are willing to let your 64 or 128 become obsolete, CMD is taking your 64 and 128 into the '90's. CMD HD Hard Drives are available now, order yours today !

** GEOS is a Trademark of Berkeley Softworks • CP/M is a Trademark of Digital Research*

HD-20 $599.95 • HD-40 $799.95 • HD-100 $1299.95

- **Built-in two drive file copier.** Copy PRG, SEQ, REL and USR files between two drives of any type or to and from REU's. Great for quick backups and moving programs and files between 1541, 1571 & 1581 drives and REU's.
- **REU support.** The JiffyDOS commands now fully support Commodore REUs (RAM Expansion Units) running under RAMDOS. Access your REU just like a disk drive without having to load special wedge utilities.
- **Enhanced text screen dump.** Automatic screen mode recognition and printing of uppercase/graphics & lowercase characters.
- **Redefinable 64-mode function keys.** Allows you to easily redefine the function keys to suit your specific needs.

JiffyDOS Version 6.0

The Ultimate Disk Drive Speed Enhancement System

- **Ultra-fast multi-line serial technology.** Enables JiffyDOS to outperform Cartridges, Burst ROMs, Turbo ROMs, and Parallel Systems – without any of the disadvantages.
- **Speeds up all disk operations.** Load, Save, Format, Scratch, Validate, access PRG, SEQ, REL, USR & direct-access files up to **15 times faster!**
- **100% Compatible – or your money back.** Guaranteed to work with all your hardware and software, including copy-protected commercial programs.
- **Uses no ports or extra cabling.** The JiffyDOS ROMs upgrade your computer and drive(s) internally for maximum speed and compatibility.
- **Easy Installation.** No experience or special tools required for most systems.
- **Supports C64, 64C, SX64, C128, C128D, 1541, 1541C, 1541-II, 1571, 1581 & more**
- **Can be completely switched out.** If ever necessary, the flip of a switch returns you to a 100% stock configuration – without resetting or powering down.
- **Built-in DOS Wedge.** Plus 17 additional commands and convenience features, including file copier, screen dump, directory menu, and single-key load/save/scratch.

- **Supports CMD HD Series Hard Drives and RAMLink.** Enhances the performance of CMD's new line of integrated C64/C128 products.
- **1581 support.** Copy programs and files from 1541 and 1571 drives to any partition on your 1581. Select partitions easily with just a few keystrokes.
- **Quick printer output toggle.** A simple 3-key command switches output from screen to printer and back with ease. Eliminates having to type the complicated OPEN4,4:CMD4 and PRINT#4:CLOSE4 command sequences.
- **Adjustable sector interleave.** Enables you to increase disk-access performance even with hard-to-speedup software.

Hard Drive Ordering Information

Add $25.00 for shipping and handling per drive. All orders shipped UPS ground. Please allow 3 to 6 weeks for delivery. U.S. prices quoted.

Canadian: 20Mb - $649.95 • 40Mb - $849.95 • 100Mb - $1349.95 Shipping: $30.00

Foriegn: 20Mb - $699.95 • 40Mb - $899.95 • 100 Mb - $1399.95 Shipping: $35.00

JiffyDOS Ordering Information

C-64/SX-64 systems $59.95; C-128/C-128D systems $69.95; Additional drive ROMs $29.95

Please specify computer (w/ serial number) and drive(s) when ordering.

Add $4.50 shipping/handling per order, plus $4.00 for C.O.D., APO, FPO, AK, HI, PR & Canada. $12.00 add'l for other overseas orders. MA residents add 5% sales tax. VISA/MC, COD, Check, Money Order. Allow 2 weeks for personal checks. U.G. & Dealer pricing available. Call or write for more information. Version 5.0 owners please call for upgrade information. Prices subject to change without notice.

We turn Commodore® Owners into Commodore Users. For only $6.65 a month.

Loadstar™ **is a monthly two-disk collection of valuable software for your Commodore 64 or Commodore 128.**

Learn from the Experts!

Draw on the vast experience of our software editors to provide for you each month carefully-selected programs which you can use productively...from spreadsheets to accounting programs, from role-playing games to recipe programs, from home office to telecommunications programs. Using clearly-written documentation, you will master each new application with ease and confidence.

Become Experienced *Inexpensively!*

Without your investing a fortune, ***Loadstar*** will quickly demonstrate to you the full power and versatility of your Commodore. With its wide range of software, you will learn more about the capabilities of your computer than you ever thought possible. At only $6.65 a month, ***Loadstar*** is your best software value!

Try *Loadstar* for Three Months!

Each month the latest issue of ***Loadstar*** will be delivered to your door on *two* unprotected 5¼" disks. Each disk is filled with great software, including utilities, games, home and business applications, and educational programs. Order now and receive **The Best of *Loadstar*, Vol. 4** absolutely *free!*

Subscribers Love *Loadstar!*

"Thanks much for an excellent product at the most reasonable price around...Your integrity, honest advertising, and value for price paid are, in a word, astounding!"

—R.P., Spokane, Washington

Contents of Issue #58*

- **The Red Obelisk**—A colorful space mining game for the dedicated strategist.
- **Lunar Calendar**—Discover the moon's phases.
- **Snigglefritz**—An entertaining one- or two-player arithmetic game.
- **Murder One**—Solve the mysteries in four intriguing whodunits.
- **Oscar Party**—Outguess the Academy on their big night.
- **Sprite On!**—Link sprites together and animate them, too!
- **Print Shop® Borders**—Twenty-eight borders for your collection.

Plus more programs and features!

*Available as a back issue

Available at Waldenbooks, B. Dalton Booksellers, and fine bookstores everywhere at a cover price of $9.95.
Commodore 64 and Commodore 128 are registered trademarks of Commodore Electronics, Ltd.
Print Shop is a registered trademark of Brøderbund Software.

FREE! **The Best of *Loadstar*, Vol. 4** when you place an order for the next three issues of ***Loadstar*** for your Commodore 64/128! This two-sided bonus disk includes:

- **File Viewer**—A tool for reading and printing SEQuential files.
- **Star Terminal**—A deluxe 300 or 1200 baud modem program.
- **Banner**—Create exciting signs and banners with your C-64!
- **Zorphon**—A fast-paced space arcade game.

...***plus*** ten more programs and features!

Your Satisfaction Guaranteed!

If for any reason you are not satisfied with your purchase, return your first issue for a full $19.95 refund. **The Best of *Loadstar*, Vol.4** is yours to keep. You just can't lose!

YES! Please rush my free **The Best of *Loadstar*, Vol. 4** and start my three-month subscription to ***Loadstar*** for my C64/128 for only $19.95 postage paid. I understand that this offer is a **trial subscription** and that I am under no obligation to continue beyond three months. *Canada/Mexico $24.95 • Overseas $27.95 • LA residents add 4% sales tax.*

Price Guarantee

Since 1981 we have led the industry by continuing to offer the lowest national prices while providing quality service. Many companies have come and gone trying to imitate our quality and service. If by some oversight, we do not have the lowest prices advertised on the products you desire, then we would appreciate the opportunity to rectify the oversight.

RUNning Ruminations

The battle has been raging since the dawn of time.

Productivity vs. games. Data processing vs. arcade excitement. Keyboard vs. joystick. Business vs. entertainment. Practical vs. enjoyable. IBM vs. CBM. Dollars vs. cents.

Ever since MiCro-Magnon man dragged home his first computer, he has had to justify its use to his fellow cave-dwellers. The first micro-man stated, "I'll use this machine for inventory control of my dinosaur bone collection, or to make cave art, or to record the history of man, or to study fossil remains."

Notice that he didn't mention games. He probably would have been banished to the farthest reaches of the cave.

Like our first computer-literate ancestor, modern software gatherers are reluctant to admit to using home computers to play games. Who are we kidding? A mega-dollar industry has been built up around game playing. Obviously, somebody is playing games.

After two million years, man has invented few machines that can be used for both productivity and entertainment. The home computer is one of these. The same machine that allows you to enjoy adventure-game excitement can also be used to generate a budget.

To deny either the great game-playing or productivity benefits of the Commodore computer is folly. The early Commodore ads of the 80s espoused the dual benefits of a machine that lets you do work *and* have a lot of fun. This strategy obviously helped to sell millions of computers.

RUN has always been dedicated to exploring the variety of applications of Commodore computers. The needs and interests of programmers and application users are addressed in the Magic column each month. Gamesters have the Gold Mine column.

Now may be the appropriate time to resurrect an idea we've toyed with in the past: We'd like to devote a section in each issue of the magazine to reader-submitted hints on using commercially available productivity software. It would address the needs of those users interested only in productivity. Remember, no game or programming tips! We just want your insights on using commercially available application and utility software—word processors, spreadsheets, databases and other commercial applications and utilities. Send us undocumented information—the shorter the better—that will help others use productivity software more quickly, easily and efficiently.

For instance, what program(s) would you recommend to a beginning computerist? What software purchases will help save you money? What database is best for easily adding more information or changing records? What terminal programs will support most major protocols? What about tips using GEOS?

Here's your chance to share your hard-earned secrets with other Commodore users. Not since the Stone Age has there existed such an opportunity to fill an information gap in the Commodore community. Let's make it work.

Dennis Brisson
Editor-in-Chief

Send your hints on using productivity software to:

RUN W·O·R·K·S

Full 64 and 128 Mode Support!

Productivity Software with a Creative Advantage

RUN Works, a new dimension to productivity software, giving you top quality programs at an economical price! Best of all, **RUN Works is fully C-64 and C-128 compatible!**

Money Manager. Have you ever wondered where your money goes each month? Then Money Manager is for you! This personal budget and record-keeping system will allow you to keep track of your income and expenses. . . so you can stay within your budget!

RUN Term. Nearly half of all Commodore users own modems. *RUN*'s user friendly RUN Term reveals the exciting world of BBSs, on-line networks and information exchanges. With advanced features like 300/1200 Baud support, autodialing, ASCII capture of text, XModem and Punter protocols and much more.

Label Base. Most people need to produce address labels in large quantities from time-to-time, and using your Commodore and printer makes the job quick and efficient. Label Base makes this time-consuming chore a snap.

Form Writer. This program lets you design and print letters, invoices, surveys, or any other kind of form for your small business or home application. Great for school projects too!

RUN Paint. This full-featured paint and draw program has more drawing options and tools than most commercial packages, plus it offers compatibility with the popular Doodle! and Koala graphic formats. Professionals and amateurs alike will find this a fantastic tool for computer art.

RUN Paint

RUN Shell. This powerful disk utility lets 1541, 1571 and 1581 users access, maintain and manipulate files with ease. It's a menu-driven disk manager that makes erasing, renaming or copying files or disks as easy as the press of a key. Plus a whole lot more!

Graphmaker. A graph-lover's delight! Generate beautiful charts and graphs of your custom data sets for analysis and impressive presentation.

Satisfaction Guarantee: Use **RUN Works** for a full 30 days. If it doesn't satisfy your productivity needs, simply return the disk and fully illustrated documentation book for a complete refund!

MAGIC

Scrolling raster stripes, magic number squares, and a program to conquer disk-error problems.

By TIM WALSH

$593 RASTER STRIPES 64

Raster Stripes 64, a unique raster interrupt, uses scrolling stripes to animate the C-64's screen without affecting the operation of most Basic programs. When adding the raster routine to your own programs, you may change the default gray colors of the scrolling color stripes. Use this command:

SYS 49196,C1,C2,C3,C4

where C1, C2, C3 and C4 are the value (0–15) colors of the four stripes.

POKE 56591,81 turns on the raster's movement and POKE 56591,80 turns it off. To change the speed and direction of the stripes, enter POKE 56580,X. A value of X greater than 99 makes the stripes scroll down and values less than 99 make them scroll up.

```

$594 MAGIC SQUARE 128

Here's a unique trick for the C-128's 80-column screen. When you run Magic Square 128, enter an odd number from 3 to 9. A square made up of numbers in rows and columns will appear, with the number you chose determining the size of the matrix (e.g., entering 3 will make a square three numbers across and three down). It's called Magic Square 128 because the sums of all rows and columns and both diagonals are the same! Study the Basic listing to unlock the key to this bit of Magic.

$595 DISK SALVAGE 64

Bad disk errors are troublesome at best, and potentially destructive to data, programs and anything else saved to a disk containing them. One or more bad sectors are usually the cause. But then, what can you do about it?

The answer is Disk Salvage 64. This C-64 program checks every track and sector on any 1541- or 1571-formatted disk to find any errors. All bad sectors are allocated so that further disk damage won't occur. Once it's finished, you can copy most files onto a new work disk, using a copy utility, and the original error-prone disk can then be reformatted.

```

$596 FILE SLICER 64/128

File Slicer 64/128 divides large text files downloaded from bulletin boards and on-line services into smaller segments so that they can be loaded into a word processor. It works on both the 64 and 128 with any Commodore disk drive and possesses superb accuracy even when used with massive (500-plus disk blocks) text files.

When you run the program, you'll be prompted for the name of the file to be "sliced," followed by the filenames for the new files that File Slicer creates. You'll then be asked for the total number of disk blocks in each segmented file. When the process begins, the segmented filenames automatically have the letters A, B, C, and so on appended to them. Be certain beforehand that there's sufficient room on your disk for the new files.

```

—JEFFREY D. PANICI, SANDWICH, IL ■

MAIL RUN

RUN takes a few knocks while defending freedom of the press.

FORERUNNER

I was a *Commodore Magazine* subscriber until it merged with *RUN*. I'm pleased to see that your Magic column is similar to *Commodore*'s Tips and Tricks column. I was even more impressed to see that you also included Louis F. Sander's gaming tips column, Gold Mine.

—RYAN OWENS
CINCINNATI, OH

RUN's Magic column was actually the forerunner of the two Commodore Magazine *columns you mentioned, Ryan. Both programming tricks and game tips were included, and Lou Sander was the column's original author. We're glad you enjoy* RUN.

—EDITORS

WHY DO THEY DO IT?

Being retired, I'm on a tight budget, so I really couldn't afford a subscription to *RUN*'s ReRUN disk, but the time it takes me to type in one or two listings from the magazine I could spend working part time. Then, I'd have the money for the subscription in a week or two.

I still buy *RUN* magazine for the features ReRUN doesn't have, like Magic and Commodore Clinic, articles, reviews and, of course, Mail RUN.

I'm curious, though, to know how many of your readers actually spend time typing in listings.

—F. E. BARKER
MIMS, FLORIDA

We invite readers' responses to these comments. According to our most recent editorial survey, 80 percent of RUN *readers have typed in program listings from the magazine. We assume that a large percentage of those who don't enter program listings avail themselves of the ReRUN disk.*

—EDITORS

THAT'S THE WAY THE COOKIE CRUMBLES

There has been a small mixup. We sent you a UPC label-maker program some time ago. In the News and New Products column in February, it was described as a software release, but we are not a software company! We are a bakery that uses a C-128 to help us run our business.

We sent you the program in response to other users wanting productivity software for the C-128. Our intention was simply for *RUN* to publish the listing.

—ROBERT PISKAC, JR.
CLEVELAND, OH

Gee, Bob, the information you sent us made us think that your program was *a new product. Unfortunately, it's too long to publish in* RUN, *and the subject matter is a little esoteric for our readers.*

But, why do you call your bakery Piskac Bakery Software?

Since your bakery is now known to 200,000 readers with sweet tooths, how about sending the RUN *editorial staff a couple of dozen of your fresh pastries?*

—EDITORS

FREEDOM OF THE PRESS?

You proved again that freedom of the press is enjoyed by those who own the presses.

Some Mail RUN readers may not recognize that you set up a Mail RUN contributor (see "Commodore vs. the Clones," Mail RUN, December 1989) to make him the main target of their responses. You used your freedom of the press to suggest not only that other readers respond, but even suggested the tack they might take.

However, his points are well taken and correct. Look to your own pages for substantiation. What products are advertised more prominently than others—productivity software or games and entertainment software?

The majority of Commodore software in your pages, as well as in mail order house catalogs, is games and entertainment software.

Commodore is getting out of the C-64/128 business. Why? Because games don't pay the bills.

Your attempt to use smoke and mirrors and to lead the discussion away from his main points failed to work on all your readers.

—BOB JACKSON
PROTEM, MO

You misunderstand the purpose of this column, Bob. We invite readers to share their opinions and comments, however unenlightened, with other readers, just as you are doing. But, when someone insults hundreds of thousands of Commodore owners and a significant part of the computer industry, we suppose he should expect to dodge a few arrows.

—EDITORS

LONG LIVE THE C-64 AND C-128

I'm disappointed that Commodore's management has decided not to continue supporting its C-64 and 128 computers. I'm appalled that they're relinquishing their leading position in the home computer market. It seems that Commodore's executives are the company's own worst enemies.

—S. W. HALL
GREENVILLE, SC

While Commodore has stopped production of the C-128, company officials state that they will continue supporting the C-64. RUN *will continue to support both machines.*

—EDITORS

WHO CARES?

RUN is beginning to sound like a broken record. Every month brings a new editorial bemoaning Commodore's abandonment of the C-128 for the Amiga line, and a host of letters from readers wringing their hands over the lack of support from the big "C." Who really cares? What audience are you targeting anyway? It seems logical that those who shell out $2.95 for your magazine already believe the 8-bit machine is the greatest thing since sex, so why do they need a pep talk on the subject?

—EUGENE PEETE
HAMBURG, WEST GERMANY ■

News and New Products

Come to grips with your joystick; print labels from predesigned layouts; and debug your programs.

By HAROLD R. BJORNSEN

Get a Grip on Your Joystick

WARWICK, RI—Duggan DeZign (300 Quaker Lane, Suite 7, Warwick, RI 02886) introduces the **Stik-Gripper**, an adjustable steel clamp that secures your joystick to a tabletop, thus simulating a real arcade game and leaving one hand free for keyboard operation. Included pads and caps protect the table and joystick. It's available for $18.95.

Faster Than a Speeding Electron

NEWARK, NJ—Bell Laboratory researchers have unveiled a prototype computer that uses light instead of electrical impulses to process data.

Within a decade, it could lead to the development of light-based supercomputers operating up to 10,000 times faster than current machines, said Brian Monahan, a spokesman for Bell Labs.

The prototype data processor—an assembly of lasers, lenses and prisms in a two-foot-square box—is the first to transmit information with light rather than electricity. The technique could allow a much greater flow of data. Scientists believe it can eventually be reduced to the size of today's microchips.

Unlike current computer chips, information would pass not just from a chip's edges but also from its surface. Bell Labs physicist David Miller likened the development to a Manhattan island in New York City where cars suddenly weren't limited to bridges and tunnels, but could leave through the air, much like a flying DeLorean.

Labels Galore

PITTSBURGH—**Label Maker**, a C-64 program for making labels, has been released by Keystone Software (PO Box 8369, Pittsburgh, PA 15218). There are predesigned layouts for 11 different types of labels, such as those for file folders, hand-fed and continuous envelopes, disks and rotary file cards. You can also create labels of your own design, using the font and color capabilities of your printer or interface. It retails for $29.95.

Check Reader Service number 402.

Learn To Think

PLEASANTVILLE, NY—In **Safari Search**, an educational package for the C-64, school children from grade 2 through high school develop their inference skills. They can work with 12 activities involving searching for one or two animals on a five-by-five grid. The program helps students to gather and record information, apply what they've learned, analyze situations and evaluate options.

Included are a video to help students develop thinking skills, a teacher's guide and a bonus lesson plan. Sunburst Communications, 39 Washington Ave., Pleasantville, NY 10570. Prices are $65 for the single package and $195 for the 10-disk lab pack.

SOFTWARE GALLERY

From the ring to the streets, from dreams to TV, this month's roundup of reviews ranges far and wide.

By BETH S. JALA

MEAN STREETS ..... A–

Magnum, P.I.
Of the Future

On a Saturday evening in 2033, for no apparent reason, Professor Carl Linsky took a dive off the Golden Gate Bridge. A few nights later, Linsky's blonde, blue-eyed daughter shows up at your office. Convinced that her father did not commit suicide, she hires you (a.k.a. Tex Murphy, private investigator) to find the professor's murderer. For $10,000 and the chance to spend your evenings with the curvaceous Ms. Linsky, you set out to discover the truth.

After inserting the destination code into the navigational computer, you travel between various California locations aboard your Lotus speeder (flying car). From the cockpit, you can contact your secretary or informant, check your inventory, save or load any of ten games, as well as control your speeder and get a view of what lies ahead. Although you'll find the Lotus much easier to maneuver than most flight simulators, you might prefer to choose the foolproof Autopilot mode.

At some places, you receive pertinent textual clues or notification that you are following a "red herring." At others, you may question, bribe or threaten people you meet to get information (e.g., destination coordinates). Each of these interactive screens contains a digitized photo of a character, overlapping an attractive drawing of his or her neighborhood.

All requests must be typed in. The game doesn't tolerate mistakes or incomplete names. Thankfully, however, the joystick is used for searching rooms. Employing a multi-menu system, the flick of a handle or the press of a button lets you discover clues, gather objects, uncover traps and shut down security systems. Items can be stored without limit, and many may be sold to raise bribe money.

Occasionally, you'll have to fight a gun battle in order to arrive at your destination. Defeating your opponents and crossing over to safety uses up a lot of ammunition. Be sure to carefully examine rooms for additional rounds. Otherwise, you'll have to fly to bounty areas and defeat more formidable enemies to earn extra bullets.

Looking for clues is the name of the game in Mean Streets.

Gun fights lack variety and appear to occur where they do for no particular reason. After a while, these and the flight simulation sections become tedious, as does the amount of disk swapping necessary to load the various screens.

These minor annoyances aside, Mean Streets offers great depth of game play and enough mystery and mayhem to keep amateur sleuths on edge for quite some time. *(Access Software, 545 West 500 South, Suite 130, Bountiful, UT 84010. C-64/$39.95.)*

REPORT CARD

A Superb!
An exceptional program that outshines all others.

B Good.
One of the better programs available in its category. A worthy addition to your software library.

C Average.
Lives up to its billing. No major hassles or disappointments here.

D Poor.
This program has some problems. There are better on the market.

E Failure.
Many problems; should be deep-sixed!

SGT. SLAUGHTER'S MAT WARS ..... B

Will You Make It
To the Big Time in
Vegas or Atlantic City?

Over the last five years, Mindscape has released a series of excellent wrestling-related games. Although the company's latest grappling software, Sgt. Slaughter's Mat Wars, also has some very attractive features, many players will probably find it to be far more frustrating than its predecessors.

The title character is G. I. Joe's most famous friend. He serves both as master of ceremonies and referee throughout the program.

You begin by evaluating five managers and choosing the one whose negotiation skills will be most helpful later in the game. Then it's on to an auction house, where you bid on and buy the contract of an up-and-coming young wrestler.

The next phase of the program takes place in an old, run-down arena. Here your joystick-controlled man furiously battles other grapplers both within and outside of the ropes. Conquering them transports you to a more prestigious stadium, where similar success earns a shot at the championship in the glamorous Coliseum.

In addition to winning matches, you can advance your wrestler's career by ►

fixing certain bouts, and recoup some bribe money by setting up and winning side bets.

Employing an innovative control system, you start out with four different wrestling moves at your command. By successfully using them to stun his opponent, your man reaches a new ability level, with its own unique set of maneuvers.

Complementing the program's impressive repertoire of attack moves are superb graphics and animation. Each

Fight your way out of the back-alley dive in Sgt. Slaughter's Mat Wars.

scene is colorful and skillfully drawn, and the ring warriors' movements are fluid and lifelike.

On the other hand, the software suffers from periods of relatively long dead time as data is loaded from disk. For instance, the minimum wait between two bouts is more than a minute and a half.

Also, the game is very tough to beat, so much so that many novice players will suffer through a seemingly endless series of defeats before enjoying any success.

As a result, Sgt. Slaughter's Mat Wars might not be for everyone. But it will probably be the program of choice for those wrestling fans who are up to an extremely challenging test of their electronic grappling skills. *(Mindscape, Inc., 3444 Dundee Rd., Northbrook, IL 60062. C-64/$29.95.)*

OAK PARK, IL

A NEWBERY ADVENTURE: A WRINKLE IN TIME ..... B–

Computerizing a Literary Experience

What child can resist a story in which the characters are named Mrs. Whatsit, the Man with the Red Eyes, and IT? These are some inhabitants of Madeline L'Engle's highly regarded (and best-known) novel, *A Wrinkle in Time*. An excellent piece of children's literature and part of the core curriculum for many U.S. school districts, it now also provides the content for an educational program geared to grades four through eight.

In the story, Meg Murry and her young brother, Charles Wallace, aided by three supernatural beings who take the form of eccentric old ladies, travel through the universe in search of the children's missing scientist father. They land on a planet of mindless conformity, where Charles submits to the control of an evil disembodied brain called IT. Meg rescues Charles, and the children return home.

The Sunburst program reinforces vocabulary and comprehension skills in an interactive format that provides students with two activities. The first tests their understanding of vocabulary words that appear in the novel; the second asks students to choose options that reflect the actual sequence of events in an adventure.

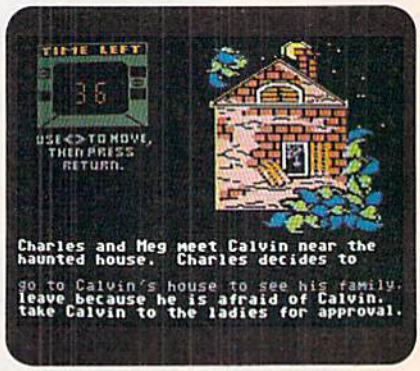

One nine-year-old devotee of this novel happily pronounced as "gross" the colorful graphics that accompany each vocabulary exercise and each scene in the adventure—a high honor, indeed. Wavy, colored lines scroll across the screen when the characters "tesser" (travel through space).

Teachers can modify the adventure section of the program by extending or compressing the number of choices allowed to successfully complete it. The difficulty level in the vocabulary exercises can also be adapted to student needs. Level 1 is multiple choice, 2 is fill-in-the-blank with a hint, and 3 is fill-in-the-blank with no hint. In each case, students are presented with ten statements relating to the story, and these vary each time the option is used.

The Multiple Choice option seems appropriate and likely to be effective. The Fill-in-the-Blank options are problematical, however; without a word list, students can guess appropriate words for the context of the sentence and still be "wrong." Unless they memorize the book, it seems unfair to expect students to guess, for example, that "compulsion" fits the sentence "Our journey begins after Calvin has a strong feeling that he must go to the haunted house. He follows his _____." My guess was "intuition."

The Teacher's Guide includes program objectives, a vocabulary list, a direct adventure path and several student worksheets. Although it suggests that students write definitions of words or look them up in the dictionary, no definitions or pronunciations are given for the teacher. Nor are teachers provided with the sentences in the novel that actually use each of the tested words—information that would be useful for truly teaching vocabulary in relation to context.

This program cannot stand alone—it would not be effective without the novel. However, it's certainly a welcome, albeit incomplete, supplement for a unit on *A Wrinkle in Time*. Although

The multiple choice aspect of A Wrinkle in Time.

both the adventure and the vocabulary exercises are limited, they should reinforce the concept of plot sequence and encourage reluctant readers to complete the novel. Students who have read the novel carefully will enjoy completing the adventure. *(Sunburst Communications, 39 Washington Ave., Pleasantville, NY 10570. C-64/single package, $65; 10-disk lab pack, $195.)*

REMOTE CONTROL ..... B–

Try Your Talent At TV Trivia

Die-hard fans of MTV's game show, Remote Control, can thank Hi Tech Expressions for creating a successful computer version of this popular TV trivia contest.

Up to three players can compete against one another, or the program will provide competent computer opponents as needed. You select your on-screen personna from a yearbook that features eight characters, ranging from an all-American girl to an unshaven "burn-out."

The main part of the game consists of two rounds of questions. The nine categories per round focus, for exam- ►

WHY CHOOSE BRIWALL?

- ✓No Surcharge on Charge Orders
- ✓24-Hour Toll-Free Ordering
- ✓Our Fifth Year in Business
- ✓Fast, Friendly, Reliable Service
- ✓In-house Technical Support
- ✓A Fair Return/Exchange Policy
- ✓A "No-surprises" Shipping Policy

SATISFACTION GUARANTEED!

1541/1571 DRIVE ALIGNMENT

This excellent alignment program is a must-have for every Commodore owner. Easy to use, it helps you to align your drive so that it runs just as if it were new! The simple instructional manual and on-screen help prompt you through the alignment procedure and help you adjust the speed and head stop of your drives. It even includes instructions on how to load the alignment program when nothing else will load!

Don;t be caught short! We get more Red Label orders for this program than any other program we sell. Save yourself the expense! Order now, keep it in your library, and use it often!

Works on the 64, 128 and SX64 for the 1541, 1571, 1541-II and compatible third party drives.

STILL ONLY $25

LOOKING FOR PROGRAMS MADE JUST FOR YOUR 128?

NEWS MAKER 128
Desktop publishing for the 128D (or the 128 with 64K video RAM upgrade). **ONLY $24**

SKETCHPAD 128
Complete drawing system for the Commodore 128 and 1351 mouse. **JUST $24**

SPECTRUM 128
80-column paint package for the 128D (or 128 with 64K video RAM upgrade.) **ONLY $29**

HOME DESIGNER 128
Professional object-oriented CAD package for the Commodore 128. **OUR PRICE ONLY $45**

BASIC 8 Package
Here's a special deal on a complete Basic 8 library. You get Basic 8, Basic 8 Toolkit and How To Get The Most Out Of Basic 8. **OUR PACKAGE PRICE $45!**

We maintain an enormous inventory of software. If you don't see what you want, CALL!

Titles marked with * were not yet available when the ad was prepared. Please call for firm price and availablilty. Titles in BOLD are new items

SHIPPING POLICY: ALL ORDERS received before 3PM EST will normally be shipped within 2 business days. All UPS shipments are sent Signature Required/No Driver Release. Add the following shipping charges to your Total software order.
UPS: Ground $4.50 (cont. USA ONLY); Air/Rush $8.00 (includes Puerto Rico/Hawaii); Overnight $12.00 + $2.50 PER ITEM (must be received by 12 Noon.)
Priority Mail: USA $4.50 (Includes APO/FPO); Canada/Mexico $7.00; Other Foreign $4.00 Handling + Actual Shipping + Insurance.
HARDWARE: Shipping charges for all hardware are $4.50 handling + actual shipping charges + insurance.

ORDERING INSTRUCTIONS: For your convenience, you can place a phone order 24 Hours/7 days a week on our TOLL-FREE LINE 1-800-638-5757. Outside the USA, please use (215) 683-5433. Price, availability, and compatibility checks are also welcome on our order line, Monday thru Friday, 9:30AM - 4:30PM EST. AFTER HOURS Orders Only Please! When placing an order, please specify your computer model, home & daytime telephone number, shipping address, charge card number, expiration date and name of bank.

ACCEPTED PAYMENT METHODS: We gladly accept Personal Checks (no holding), Money Orders, VISA, MASTERCARD, School Purchase Orders, or COD ($4.00 additional -- for established Briwall Customers ONLY). All checks must be in US Dollars and drawn on a US bank. There is no surcharge for credit cards and your card is not charged until we ship!
RETURN POLICY (for Non-Entertainment software and Accessories ONLY): We have a liberal return policy to better service your needs. If within 15 days from the time you receive an item, you are not satisfied with it for any reason, you may return it to us for either a refund, exchange, or open credit. REFUNDS ARE SUBJECT TO A 20% RESTOCKING FEE PER ITEM RETURNED ($10.00 MINIMUM PER ITEM.) **EXCHANGES/OPEN CREDITS** will gladly be issued for the full purchase price of the item. **DEFECTIVE** items, Entertainment software, Hardware items and Special Order items will be repaired or replaced with the same item only.
TECHNICAL SUPPORT Call (215) 683-5699, Monday - Friday, 9am - 5pm EST.
We do our very best to help you with your product selections before you order, and after you receive your product. General questions, such as price, compatibility, etc., will be handled by our order staff at the time you place your order. BUT, if you have specific, detailed questions about a product you will get the most help from our Technical Support Line.

SOLID PRODUCTS . . . SOLID SUPPORT

ple, on specific shows (e.g., "Happy Days"), types of programs (e.g., "Reruns") and educational skills. Examples of the last are "Brady Physics," which poses science questions involving characters from The Brady Bunch series, and "Shakespeare TV," which presents clues in the language of the Bard.

You choose questions from a nine-channel, TV-screen gameboard. Eight of the channels contain three questions of increasing value. The ninth hides a surprise, such as advice from Ranger

You have various choices when selecting your character in Remote Control.

Bob or tips from "Home Shopping Zone," which costs you ten points. Whenever a new category is selected, the emcee appears and delivers a witty remark. Make a mistake, and he's ready with an insult.

After a question flashes across the screen, the first player to "buzz" is allowed 20 seconds to type an answer. If it's wrong, the others are given a chance. The person responding correctly chooses the next question, and so on until none remain. Replies are "buzzed in" via separate keys, spaced far apart on the keyboard to facilitate play by three individuals.

A Snack Break—food falling on the contestants from above—occurs between rounds. The low scorer is eliminated during the second round. The two remaining players compete in the "Think Real Fast" game, where they have 30 seconds to answer as many questions as possible, each one worth 25 points. The person with the highest score wins at the end of the round.

Remote Control's many virtues include colorful, animated graphics, enough questions to last for a fairly long time and a good-natured sense of humor. On the down side, the game sometimes crashes while loading new questions. Although scores are tallied correctly, the wrong person is occasionally declared winner. The program's greatest drawback is the lack of a penalty for incorrect replies. This leads to a lot of wild guessing.

If you're tired of music videos, but your taste for tasteless trivia is unquenchable, shut off MTV, turn on your computer and play Remote Control. *(Hi Tech Expressions, 584 Broadway, New York, NY 10012. C-64/$14.95.)*

SYRACUSE, NY

BALLISTIX ..... B–

Certainly a Different Way To Play Ball!

Ballistix's package indicates that the game resembles soccer and pinball. However, players will probably notice its marked similarity to the youthful sport of shooting marbles.

A game begins with a large black ball appearing on a rectangular field. Using a movable, joystick-controlled cannon, you shoot silver pellets at the ball to nudge it away from your goal and toward your opponent's goal.

Complicating matters are all sorts of obstacles and objects that materialize on the game's 64 levels. In addition to barriers, bumpers, ramps and tunnels, there are arrows in the floors that accelerate the black ball up to extraordinary velocities, as well as magnets that drag it away from your control. And inadvertently guiding the sphere into an on-screen acid pool causes the ball to rapidly melt away.

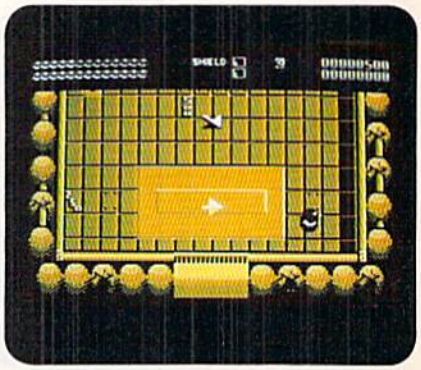

In two-player competition, you strive against a human opponent, who controls his or her own cannon. In one-player games, only your gun appears as you battle against gravitational forces that constantly draw the ball toward the goal you defend.

The program encourages customized play by allowing for the adjustment of eight different factors. You can, for instance, select the starting level for a gaming session and also determine how far pellets will travel before they fade from the screen.

Unfortunately, the game's documentation is too brief, requiring quite a bit of experimentation to determine just what the software is capable of. I especially missed explanations of the effects that some on-screen objects have on gameplay.

Also, some players will be annoyed by the program's suspensions of the laws of physics. For example, although striking a sphere left of center causes it to roll to the right in the real world, such a blow in Ballistix often moves the ball in the opposite direction. This confusing lack of realism tends to reward tactics that emphasize fusillades of pellets rather than precise single shots.

Compensating for the problems are nicely done sound effects and terrific graphics and animation. They make for an exciting experience. In fact, it is Ballistix's sensory frills that are its major attraction. For some, that might be sufficient justification to purchase this high-tech version of an enjoyable child-

Remember: arrows on Ballistix's playing field accelerate the black ball!

hood pastime. *(Psygnosis, PO Box 483, Addison, IL 60101. C-64/$29.95.)*

OAK PARK, IL

FRIGHTMARE ..... C+

Dreams and Nightmares And Trance States, Oh My!

It's midnight and you're here, where bad dreams become visions of terror and nightmares turn into "frightmares!" Instinct urges you to flee the horrors of this twisted landscape. But, why be in such a hurry to get out? Why not climb those vines, swing over that nasty looking werewolf, pick up those bullets, and "go for it!"

As fate would have it, just when you decide actually to seek out your worst nightmare, it suddenly becomes most elusive. Hordes of zombies, ghosts, serpents and other baddies can't wait to extinguish your five dream lives and send you back to wakefulness. To top it off, you discover that your current bad dream is merely the lowest rung on a hierarchy of truly nightmarish proportions. Yet to be achieved are 14 levels of Dream (like Cruel, Terrible and Murderous); then, you can tackle the next six dream states (Vision, Trance and

Continued on page 40.

EXPERIENCE THE POWER

In our previous ads you saw the great comments that versions 1, 2 and 3 of SUPER SNAPSHOT received from various North American reviewers. And with V4 it was more of the same except the comments took on an international tone. For example....

"...a joy to work with. ....I highly recommend it."
Eric Hoyroyd, Sept., 1989
Australian Commodore and Amiga Review

"I personally liked the facilities that Super Snapshot gave me, and will no doubt use it regularly."
S Garton, April 1989
YOUR COMMODORE (England)

"This cartridge just keeps getting better with every release. There's nothing else that can even touch it."
INFO March/April 1989

We were happy to receive such acclaim; but YOU wanted more. So much more that the memory required far exceeded any of the current cartridges available.

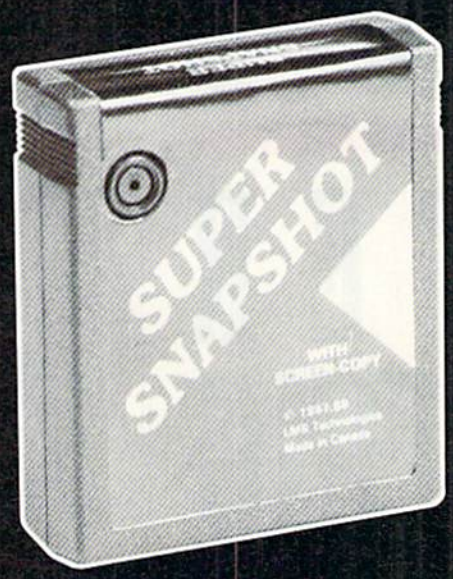

To us at LMS, the solution was obvious...we had to double the memory of our cartridge. This meant a whole new hardware design. That's right, SUPER SNAPSHOT now contains an incredible 64K rom and 8K ram combination. NO OTHER CARTRIDGE IN THE WORLD OFFERS THIS MUCH POWER!

Buying 2 or 3 competitive cartridges would still not give you all of the features listed on the right!

▶ Version 1, 2, 3 and 4 owners may upgrade to version 5 for $30.00 CALL US ▶ C128 disable switch or 64 reset switch, add $8.00

101 WAYS TO BETTER COMPUTING

Discover these time-tested tips to save minutes and money and increase your computing pleasure a hundredfold.

By *RUN* EDITORS

SETTING THE STAGE

(Or, advice on arranging your equipment.)

► The type of flooring you use in your computer room is important to the life of your equipment. Cushioned vinyl or carpeting made of low- or non-static material are good bets. Alternatively, you can install a static mat under the computer zone or locate antistatic buttons or conductive foam pads on the furniture.

► Don't put your power supply on the floor, especially if it's carpeted.

► Set up your computer equipment so air can flow around it (including underneath); never block any vents. Overheating reduces a computer chip's life.

► If you must do your computer work in a confined space, set up a fan so that it moves air over your equipment.

► If you put rubber feet or wooden blocks under your Commodore for air flow, make sure you provide support for your modem or anything else that attaches to the user port to prevent strain on the connectors.

► Don't prop up your computer equipment with metal; it can generate a magnetic field that may destroy data or interfere with your machine.

► Keep your power supply as far away from your monitor as possible to minimize interference.

► Locate proper lighting at your computer work area if overhead lighting is insufficient or unavailable.

► Eliminate the sources of glare on your computer screen. For example, never position your screen directly in front of a window.

► Move computer hardware away from windows to prevent exposure to direct sunlight, temperature fluctuations and weather elements.

► Keep your disks away from the electromagnetic radiation of a motor or TV tube; also keep them away from refrigerators, stereos, telephones, vacuum cleaners and metallic objects.

► Keep cables and equipment away from any sources of stray electrical signals, such as motors or transformers.

► Arrange cords, cables and other plug-ins so that you can't trip over them and accidentally unplug the computer.

► Tie up unused monitor, drive or printer cables with rubber bands or twist ties.

► Label each cable to help simplify identifying the tangle of wires and connectors behind your computer. You'll appreciate this the next time you have to unplug your disk drive or interface.

► Label the sockets that correspond to each cable. Attempting to plug, for example, a power supply input into a monitor socket could prove disastrous.

► Use a separate, private line for your modem—don't connect it to an extension jack of your house phone.

► Isolate your system with a power strip that has its own switch and fuse.

► Use a mousepad with your mouse.

ILLUSTRATED BY RAYMOND MEDICI

WHY DIDN'T I THINK OF THAT?

(Or, commonsense computing shortcuts and care.)

► Consider joining or starting a user's group to exchange Commodore information.

► When transporting your disk drive, insert an old disk or cardboard head protector into it. Then place the drive in its original box or pack it firmly with styrofoam popcorn in another.

► Let any disk that has been exposed to cold temperatures warm slowly to room temperature. Wait at least one day before using it. If you record on a cold disk, you may not be able to read it when it's warm.

► Loading problems can occur when high humidity causes the interior of your disk envelopes to become slightly damp. Reduce this problem by storing your disks with a desiccant bag or capsule (such as those packed with vitamins).

► Seal printer ribbons, disks and other accessories in moisture-proof packaging to keep them from drying out or being contaminated by dust. Store disks upright, at moderate room temperature, and protect them from light.

► Generally, anything that puts pressure on a disk's surface may damage it (writing on a disk label with a ballpoint pen, for example).

► If you have a lot of files on a disk, print out a directory and tape or glue it to the disk sleeve. Then you'll know, at a glance, what files are on your disk.

► Employ a color-coded system if you use a lot of disks.

► Turn a radio on and place it first on the left side of your monitor and then on the right. Put your disk drive on the side of the monitor that appears to pick up the least interference.

► To avoid having static electricity destroy a joystick port, put a piece of black electrical tape over the ports. It will insulate them against static charges, won't gum up the ports and can easily be removed to plug in a joystick. Also, remember to keep fingers and foreign objects away from all ports.

► If new equipment is going to fail, it will usually happen early in its life. So, make it a practice to "burn in" new equipment: Leave it powered up round-the-clock for about 72 hours after assembly to see whether it continues to function normally. If it doesn't, you can get it replaced while it's still under warranty.

► If your keyboard gets wet, turn off the power, unplug the machine, and let it dry for at least 24 hours.

► Do not simultaneously power up several machines or pieces of equipment; this can cause a brief but harmful power surge. Turn on your peripherals, then your computer; reverse the action to shut down your system.

► Don't plug in or unplug a printer or disk drive, either at the computer or the peripheral, while the peripheral is on.

► Make sure all plugs are firmly implanted and have no pressure on them. A plug that is in crooked may make a poor contact or cause a short.

► Never unplug anything from any port, especially the expansion or user port, while your computer is on.

► If you have problems running a program, try unplugging your joystick or other input device, plug-in cartridges, interfaces and all unnecessary peripherals. This may solve the problem.

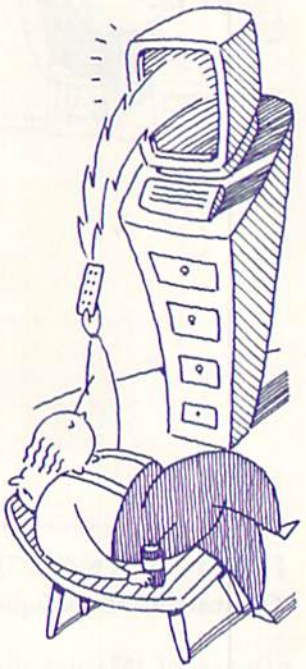

► Read your computer and peripheral manuals; the 64 or 128 *Programmer's Reference Guide* can also come in handy. Become familiar with them and your system. You'll be able to pinpoint problems quickly and avoid a great deal of frustration.

► Take frequent breaks from computing to avoid visual and muscle fatigue.

► Use a comfortable chair that helps you maintain good posture when computing.

► Each time you use a program, adjust the monitor screen's color to your specifications to make it easier on your eyes.

► Use anti-fog/anti-static eyeglass spray to help keep your monitor screen dust free.

THINGS YOUR MOTHER ALWAYS TOLD YOU

(Or, housekeeping hints.)

► Keep your computer desk and work area clean and organized.

► Don't keep your computer system in the kitchen, where grease, smoke and steam can affect it.

► Don't eat, drink or smoke around your equipment.

► Before typing on your computer, wash your hands if they're greasy or covered with newsprint.

► Handle the keys gently. Press them down; don't hit them.

► Don't let young children play unsupervised with your equipment. ►

► Keep pets away from your computer.

► Try to take at least one computer course (adult ed, college level, for beginners only, etc.) to learn the fundamentals of computing.

► Share your knowledge with others interested in learning more about computers.

► Keep complete and accurate receipts and records of model and serial numbers and dates of purchase for all your computer hardware and software.

► Always make backups of your master and work disks.

► Heed the warnings on the backs of disk sleeves: Do not bend, drop, fold, freeze, heat, throw, spill on or sneeze on, scratch or magnetize. In other words, handle carefully and insert and remove from the drive carefully.

► Make sure write-protect tabs are securely in place; otherwise, they can become lodged in your disk drive.

► Never touch a disk's magnetic surface.

► Do not place disks on your monitor or disk drive when in operation.

► Don't distribute backup copies of commercial software to user's groups, friends, neighbors, etc.—it's immoral and illegal.

► Cover your equipment when not in use to avoid dust buildup.

► Dust your workstation carefully and frequently.

► Frequently clean your mouse according to the instructions in its user's manual.

► Make it a habit to discharge yourself of static prior to touching any equipment.

► Unplug all computer accessories and the telephone line from the modem whenever a thunderstorm is approaching or lightning is nearby.

► Don't forget to unplug your telephone line from the modem when not in use.

A Penny Saved

(Or, guidelines to reducing computing costs.)

► Check with other software owners about the programs you're interested in before purchasing them yourself. Alternatively, see if you can try a demo of the program at your local computer store before buying.

► Before buying a non-Commodore printer, ask the salesperson, or preferably a printer technician, if the machine is fully compatible with your Commodore.

► Although printer ribbon re-inking may be a way to save money, it could also ruin your print head if the re-inker contains abrasive particles. Make sure you only use ink that is specifically made for a dot-matrix head because it has lubricant in it to reduce wear.

► Print on both sides of your computer paper.

► Buy good quality disks; that is to say, those with a clear or colored reinforcement ring in the exposed part of the disk around the center hole. Disks without this protective ring may not last as long. Pennies-apiece disks will cost you in the long run.

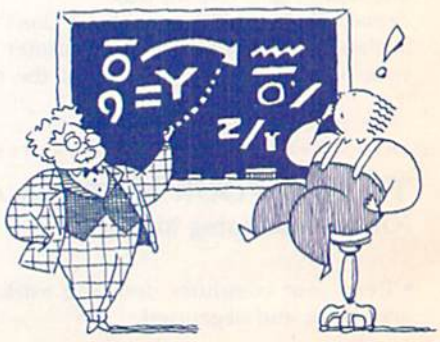

► Commercial disk storage boxes are expensive and quickly become full. An old shoe box works just as well.

► Just as with light bulbs, turning off your monitor and computer when not in use will extend their life expectancies.

► Try to make long-distance calls to BBSs during the evening and on weekends, when telephone rates are lower.

I Didn't Know That!

(Or, insights and unique solutions.)

► Owners of 1571 disk drives should never close the drive door without a disk or insert in the drive. With nothing in the drive, the heads will come into contact with each other and damage may result.

► Initialize the disk (OPEN 15,8,15, "I0:":CLOSE 15) after using commercial programs that involve a lot of access to your 1541. This will center the disk drive's head.

► Don't leave disks in a 1581 drive when you turn the power on or off. Auto-booting 1581 disks (with the 1581 as a primary drive) can be done after the computer is on by pressing the reset switch or typing "BOOT".

► C-128D owners using second drives must have the drive turned on in order for their modem to work.

► Don't use the flip sides of one-sided disks; they are unreliable.

► Unplug your power supply when you're not using your computer. Turn-

ing off the computer does not turn off the supply; it still generates heat even when the computer is off.

► To slow down a scrolling listing or directory, press the control key on the C-64 and the Commodore key on the C-128.

► It's a bad habit to advance the printer by hand when it's turned on.

► To prevent mineral deposits on your system, use distilled water in any ultrasonic humidifier that happens to be situated anywhere near computer equipment or accessories.

ZEN AND THE ART OF TYPING

(Or, how to enter errorless listings.)

► Enter one line at a time and check for errors before entering the next line.

► Use a guide, such as a sheet of Post-it paper, under each line as you go along to help you keep your place.

► Double-check all numbers.

► Look for missing characters, missing parts of a line, or missing lines.

► Familiarize yourself with the different types of errors an incorrectly typed listing can generate.

► Refer to *RUN*'s "Troubleshooting Troublesome Type-Ins" in the May 1989 issue, and also to our Checksum program, which is published monthly.

► Give your disks meaningful and unique ID characters (the two-digit identifier placed in the upper-right corner of the disk directory).

► Put a menu program on each disk you create to facilitate accessing programs.

► Place a write-protect tab on a source disk if you're copying from it to a destination disk. It will protect against accidentally erasing the disk's contents.

► Frequently save listings as you type them in. Save files on the C-64 with SAVE "filename",8. Save files on the C-128 with DSAVE "filename".

► Familiarize yourself with abbreviations for Basic commands. You can then type in *RUN*'s listings much more rapidly.

► Check all your Data statements for errors if you get an Out of Data message.

► Try to establish a system for naming your files. For example, use all lowercase and a suffix (like the date) to help you identify them later.

► Get in the habit of not using spaces within filenames. It makes it easier to send files via telecommunications.

► When loading a file, be sure to type in the filename exactly, including spaces and punctuation, just as it appears in the directory. If you type it incorrectly, you'll encounter a File Not Found error message.

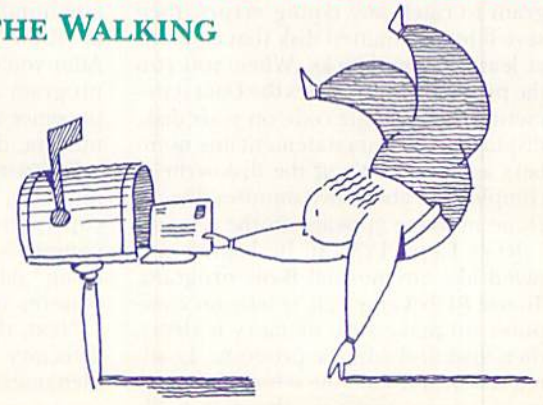

► To access your disk directory on the C-64, first type LOAD"$",8 and press return. Then type in LIST at the Ready prompt. To load a C-64 program from the directory, cursor up to the filename, type LOAD beside it, cursor over to the space following the quote after the filename, type ,8: and press return. Then, enter RUN:.

To get to the directory on your C-128 in either 40- or 80-Column mode, simply press the F3 key. To load in a program from the directory, move the cursor up beside the file you want to load. Type D followed by the shifted L key over the first two spaces in that line, move the cursor over beyond the filename (without erasing it) and press colon and return. At the Ready prompt, type RUN and a colon and press return. This is a great time-saver.

► Save and verify a program before running it.

LET YOUR FINGERS DO THE WALKING

(Or, how to order by mail.)

► Try to buy from mail order firms that specialize in Commodore products. If that isn't possible, buy from those that sell only computer products.

► If you call a mail-order house, ask for a delivery price and date of arrival.

► Provide a *complete* description of what you want.

► Don't send cash through the mail.

Readers: If you have ways to better computing of your own that you'd like to share with others, send them in. We'll publish them in a future issue of *RUN*.—Eds. ■

RUN Copy 128

Try this speedy and friendly file copier that works with any two C-128-compatible disk drives.

By ED PARRY

RUN Copy 128 is a C-128 multifile/multidrive file copier that works with any two C-128-compatible disk drives. It operates just like its C-64 counterpart (published as "Friendly File Copier," *RUN*, November 1989), with the following exceptions:

1. RUN Copy 128 can copy 100, not 200, files at one time.

2. RUN Copy 128 automatically detects 40- or 80-Column mode and reacts accordingly.

3. The escape key replaces the left-arrow key for resetting the program at any input prompt.

4. File copying, with either a 1571 or 1581 disk drive, is several times faster than with RUN Copy 64, because those drives use fast serial input/output in 128 mode.

5. A bell indicates copy completion and any problems.

If you're unfamiliar with RUN Copy 64, here's everything you need to know to get the C-128 version of the program up and running.

Preliminaries

Type in Listing 1, called RUN Copy 128.Bas, using *RUN*'s Checksum program to catch any typing errors, then save it to a formatted disk that contains at least 50 free blocks. When you run the program, it translates the Data statements into machine code on your disk, displaying the Data statement line numbers as it goes. When the disk-write is complete, in about five minutes, the All Done message appears on the screen.

RUN Copy 128 can be loaded and saved like any normal Basic program. To use RUN Copy 128, reset your computer (to make sure memory is clear), then load and run the program. Loading is fast, and soon the self-explanatory main screen appears, showing fields

RUN Copy 128's main screen display.

such as filename, file type, file size, files chosen to copy, and files actually copied. The screen also offers the three options explained below.

The Copy Files Option

Copy Files, the main RUN Copy 128 option, is invoked by pressing the C key. When the program prompts you for the source and destination drive numbers, specify each by using the cursor-right key to increase the default number or the cursor-down key to decrease it, and then pressing the return key to enter your choice. You can input any numbers from 6 (for a hard drive or RAM disk program) through 30. After you've pressed the return key, the program automatically checks for the presence of each drive and, if one is missing, displays an error message.

When it has identified acceptable drive numbers, the program asks you for a copy pattern. Any standard directory pattern is acceptable, with the default being * (all files). Examples of acceptable patterns are shown in Table 1.

Next, the program reads the source directory, displays the first matching filename and asks if you want that file copied. Press Y to place the filename in the program's internal list of files to be copied, or N to exclude the filename from the list. Pressing A aborts the copy option and resets the program.

Once you've specified the files, copying begins. RUN Copy 128 uses the standard disk read/write routines, so you can copy files easily from any standard Commodore disk drive to any other.

During copying, the R/W field indicators flash back and forth to indicate which phase, read or write, the program is in. In addition, the # field shows the file number currently being copied, the To Copy field shows the total number of files to be copied, and the Copied field shows the number of files already done. The Copy Complete message appears when the entire process is finished.

You can abort a copy operation at any time by holding down the run-stop key. It may take several seconds for the abort to occur, so keep holding the key down until you see the Copy Aborted message.

Utilities, such as JiffyDOS, that speed up disk read/write operations work well with RUN Copy 128.

The Disk Command Option

This option lets you issue standard disk commands, so you can scratch files, format disks, validate disks, and so forth, from RUN Copy 128. Several examples of acceptable disk commands appear in Table 2. If you need further help, see the section on disk commands in your drive manual.

Press the @ key to activate the Disk Command option. Then use the cursor and return keys to specify the number of the drive that should receive the command. Here again, acceptable numbers range from 6 through 30.

The program verifies the presence of the drive and then prompts you for the command. Type it and press return.

RUN it right: **C-128; any two disk drives**

After execution, the program displays the disk status as returned by the drive.

The Directory Commands Option

The third RUN Copy 128 option, for displaying disk directories, is activated much like the Disk Command wedge. Specify a drive device number with the cursor and return keys; then, at the $0> prompt, enter any valid directory pattern (see Table 1) or press return to show the entire directory.

In addition to the normal directory information, RUN Copy 128 shows how many files are in the list. At the Pause message, press any key to return to the main screen.

If you have two disk drives, you'll find RUN Copy a handy utility. R

Ed Parry, author of EBBS bulletin board software, writes programs and articles for a variety of publications.

Table 1. Examples of acceptable copy patterns.

Command	Pattern
*	All files in the directory
*=P	PRG files only
*=S	SEQ files only
A*	Files whose names start with A

Table 2. Examples of acceptable disk commands.

Command	Function
>i0	Initializes a disk (loads the BAM)
>v0	Validates (cleans up) a disk
>n0:target disk,RC	Formats a disk as the target, with an ID of RC
>n0:erase disk	Erases a formatted disk
>u0>m0	Puts a 1571 drive in 1541 mode
>u0>m1	Puts a 1571 drive in 1571 mode
>s0:filename	Scratches a file

FOOTBALL • BASKETBALL • BASEBALL • BOXING

SPORTS FANS...THE SPORTS SIMULATIONS YOU HAVE BEEN WAITING FOR ARE HERE!

3 IN 1 FOOTBALL

• with Stats Compiler for each player and team • you choose from 14 offensive plays and 6 defensive formations • includes 180 college teams and the 28 Pro teams from the '88 season PLUS 174 great college and 189 great pro teams of the past

COURT SIDE COLLEGE BASKETBALL OR BASKETBALL: THE PRO GAME

• each player contributes as they did in real life • Stats Compiler • you determine starting lineup, substitutions, shot selection, passing, offensive and defensive styles of play and more • the College game includes 292 teams from the '88-'89 season plus 70 all-time greats • the Pro game features the 23 Pro teams from '88-'89 and more than 125 great teams of the past

FULL COUNT BASEBALL

• Includes all 26 teams from the most recent and 52 great teams from the past • 29 man rosters • Ball park effects • Stats Compiler automatically keeps all player and team stats as well as past schedule results. • Complete boxscore to screen and/or printer after each game. • One player vs. computer manager, two-player, and auto-play options. • Input your own teams, draft or trade players from teams already included. • You choose the starting lineups, batting order, relief pitchers, plus game decisions like when to hit away, bunt for a hit, sacrifice, steal, hit & run, bring in the corners or the entire infield, take an extra base, DH option and more!

TKO PRO BOXING

• Includes over 600 boxers (200 active, 400 retired) all divisions • Ability to fight—retired fighters at different stages of their careers • compiles records & ranks contenders • Fight boxers across eras • Select between round strategy or let computer manage boxers • Pre-fight condition option • Between round condition report & three judge scoring • Cuts, TKO's, KO's & color commentary during rounds

Send check or money order for **$39.99** each. Visa and MasterCard accepted on phone orders only.
Please add $2.00 for postage and handling.

Basic Takes the Wrap

Take command of your screen displays with this word-wrapping routine.

By HOWARD I. GOLDMAN

The first command a beginning Basic programmer learns is Print. Yet, even if you have years of experience, setting up an attractive screen display can be a chore. You must keep track of line lengths yourself, since Basic provides none of the automatic parsing (word-wrapping) you take for granted in your favorite word processor. And arranging text with graphics can cause endless frustration.

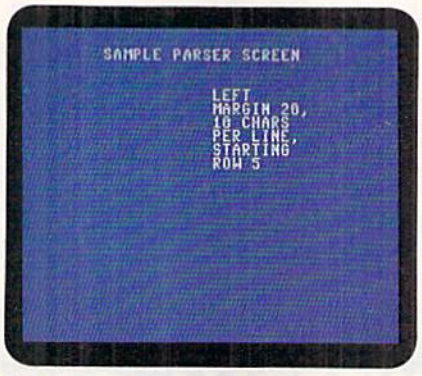

Things are easier with Parser, a short (141-byte) machine language routine that takes much of the hassle out of managing text displays. It automatically word-wraps while printing text strings to the screen, so you don't have to break messages into several lines of Print statements. Better yet, it lets you specify an exact display format, so that you can easily integrate text with character graphics.

Parser is intended for use in your own programs, not on its own. Hence, when merging it into another program, you'll probably need to renumber Parser's lines.

The program in Listing 1 is a Basic loader that reads the machine code in its Data statements and pokes the code into memory. The first step you should take is to type in the loader, using *RUN*'s Checksum program to detect any typing errors; then save it to disk before running it.

By default, the machine code is placed starting at memory location 49152. However, you can put it at any address where you're sure you have 141 bytes of memory free (the cassette buffer, or the free area at 679, for example). All you have to do is change the value of SA in line 20.

Once you've run the loader, Parser is ready to use in either Immediate or

The Parser program gives you flexibility in formatting text displays.

Program mode. The syntax is:

SYS SA,<text$>,<left margin>,<characters per line>,<starting row>

The Parameters

All of Parser's parameters may be either literal constants or expressions (using variables and numeric or string functions). An explanation of each parameter follows.

SA is Parser's starting address in memory (the value assigned to variable SA in the loader program).

TEXT$, the message to be printed, can be any string expression—a string variable, a literal string enclosed in quotes, or a combination of both concatenated with a plus sign. A combination expression might look like:

F$+T$+"PRESS ANY KEY"

The complete expression may contain no more than 254 characters.

The left-margin value specifies the starting column for each line of text and ranges from 0 to 39. This parameter is useful for positioning a block of text to the right of a character graphic. If the graphic extends to, say, column 14, you might set the left margin of the text to column 16.

The characters-per-line value, which also ranges from 0 to 39, specifies the maximum number of characters allowed on each line. (Of course, the number of characters actually printed on a line depends on how the words wrap.) This parameter provides an indirect way to set a right margin, enabling you to position a block of text on the left side of the screen.

Finally, the starting-row value, ranging from 0 to 24, lets you position the text vertically. Note that Parser outputs a carriage return after printing the string, so, if your text prints down to the last screen line, the screen will scroll.

Program Notes

I've made Parser as compatible as possible with other machine language routines you may use in your programs. It's relocatable, as I have mentioned, and it doesn't touch zero-page locations 251–254, which are used by many machine language programs.

Because of the C-64's 40-column screen width, the total of the left-margin and characters-per-line values you specify cannot exceed 39. You cannot, for example, specify a left margin of 10 with 32 characters per line. Basic will return an Illegal Quantity error if you exceed the limit.

Make certain that the value you supply for characters-per-line is greater than the length of the longest word in the string. If, for example, you specify a line length of 11, and there's a 15-letter word in the string, Parser will go berserk and fall into an endless printing loop.

80-Column Printers

With a couple of modifications, Parser can be used to send output to a

printer. Use the statement:

POKE SA+73,32:POKE SA+48,81

where, again, SA is Parser's starting address in memory. This statement provides a maximum left-margin plus line-length total of 79, instead of the 39-character screen limit.

Open a file to the printer and redirect output there with the CMD statement before calling Parser; then close the output channel when you're finished. The statement:

POKE SA+73,29:POKE SA+48,41

will reset Parser for screen printing. R

Howard I. Goldman, a self-taught Basic and assembly language programmer, is also a serious performing musician.

GET MORE PLEASURE FROM THE BIBLE WITH **LANDMARK**

The Computer Reference Bible

Here's what LANDMARK will enable you to do:

- ✔ SEARCH THE BIBLE—Find Phrases, words or sentences.
- ✔ DEVELOP TOPICAL FILES—Copy from The Bible text and search results then add your own comments and notes.
- ✔ COMPILE YOUR PERSONAL BIBLE— Outline texts in color. Add notes, comments, and references. Make your Bible Study organized and on permament record!
- ✔ CREATE FILES— Then convert them for use with wordprocessors like Paperclip and GEOS.
- ✔ MAKE SUPPLEMENTARY STUDY FILES—For specific study and develop translation variations.

A Booster Shot for GEOS

GEORAM, the latest addition to the GEOS family, will give you the speed you need with either GEOS 64 or 128.

By MARK JORDAN

Anyone who has ever used GEOS knows that speed, or the lack thereof, is that system's greatest weakness. Yet there was a glimmer of hope when the 1700 series RAM expansion units (REUs) was announced by Commodore and supported by GEOS. The 1764, a 256K unit for the 64, and the 1750, a 512K unit for 128 owners, offered Commodore computerists the opportunity to run GEOS at processor speed. The results were dramatic.

The marriage of GEOS to an REU was blissful. Sadly, a lot of Commodore users never got the chance to witness such a wedding. The chip wars began, Commodore stopped making REUs, and celibacy became the technical norm. So, word that Berkeley Softworks was producing a memory expansion unit for GEOS was, well, a little like news that a whole bunch of potential brides were moving to Bachelorville!

Before describing all of GEORAM's charms, let's be clear on what it is. On the hardware side is a 512K memory expander card—about the size and shape of an eight-track tape cartridge—for use *only* with GEOS. It works on either a C-64 or C-128, is inexpensively priced ($124.95), plugs into your Commodore's cartridge port, and is *available*. On the software side is a new system disk (2.0r) that, thanks to its creation of a pseudo disk drive, performs speedy operations. Unfortunately for those who do not own GEOS, GEORAM is only for GEOS operation.

Testing Tells All

Now for those charms: speed, speed and more speed. Berkeley advertises an increase to 35 times the disk transfer speed with GEORAM, and that's a fact. As for overall operating speed, I did a series of benchmark tests with GEOS 128 and averaged the results: GEOS ran 3.5 times faster with GEORAM. Remember, however, that while using GEOS, you're doing more than just accessing the drive. For example, drawing bitmapped screens is a fairly slow, non-disk-access process that frequently occurs with GEOS and which GEORAM won't do much for. Still, you've taken a mini-quantum leap in computing power whenever you speed up anything 350 percent.

The acceleration commences at the deskTop. With GEORAM in place, as soon as you boot up GEOS and start paging through your icons, you'll notice the dramatic effects. Flip a page in 1.25 seconds, compared with 6.5 seconds to do the same with only a 1571 drive—a 520 percent increase.

Desk accessories are also accelerated. One of the most crucial, Photo Manager, is so sluggish without RAM expansion that some computerists forego using graphics in their geoPublish documents. It simply isn't worth the 12.73 seconds it takes from the time you select Photo Manager until the first photo appears. With GEORAM, it happens in a mere 2.85 seconds.

I also found there were excellent time gains in running GEOS applications, particularly geoPublish and geoPaint. Without GEORAM, it took me 32 seconds to redraw a geoPublish screen that included a bitmap, text, foreground graphics, special text, and so on. With GEORAM, that time was cut in half. Scrolling from the left side of the screen to the right took 101 seconds without and 40 seconds with.

You'll see the greatest speed improvements while moving about the screen in geoPaint. Without GEORAM, it takes over three seconds to go from point A to point B; it's less than a second with GEORAM. The speedup is more dramatic the first time you move across the screen because geoPaint spends time reallotting disk space as you increase the size of your drawing.

With GEORAM, all applications get a tremendous speed boost when dealing with files—whether saving, copying or loading them. For instance, by double-clicking a geoWrite text file from the deskTop, I was ready to type in a mere 5.7 seconds. Compare that with the interminable 24.4 seconds required to do the same when limited to a 1571 drive.

The RAM, the Shadow And Other Goodies

These speed increases are largely due to the creation of that pseudo disk drive I mentioned earlier. GEOS treats the GEORAM unit as if it's a real drive, but its limitations are electronic rather than mechanical. When you use GEORAM, you can assume, for all practical purposes, that you're reading and writing to a real disk drive. It's as easy as that.

There are a number of other efficiencies with this new system software that accompanies GEORAM. For one thing, Shadow mode increases speed in the physical drives. In this mode, GEORAM keeps a copy of files in RAM and doesn't access the drive when it doesn't need to. Another feature speeds up directories on 1581 drives by keeping the directory in RAM, a big page-flipping time-saver if you have a fairly full 1581 disk in the drive.

GEORAM also has some special goodies for the C-64 owner. First and foremost, GEORAM is 512K, not 256K as is the 1764. That means you can have an entire double-sided disk's contents in RAM. Second, GEORAM doesn't require a new power supply. A third advantage is that you can almost instantaneously re-enter GEOS from Basic. On a C-128, by using the reset switch, you can sometimes even successfully re-enter after a crash.

Say It Ain't So!

The drawbacks to GEORAM are few. With its circuit board sticking out of the

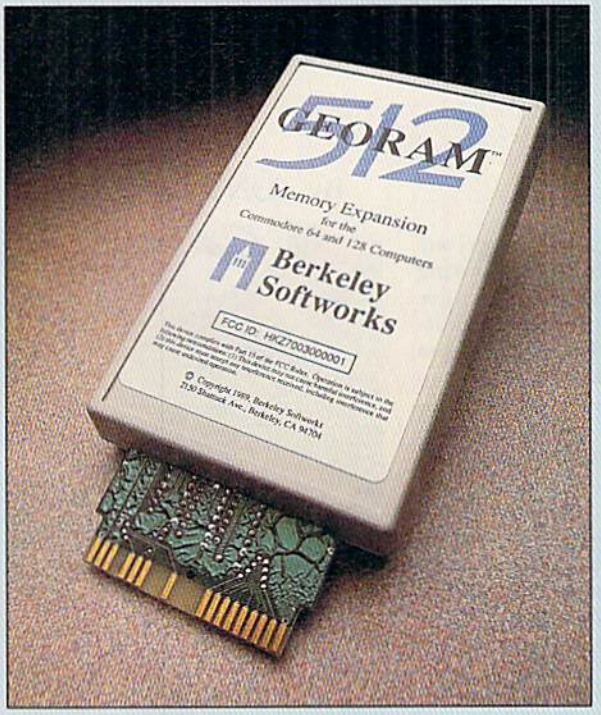

plastic case by almost an inch, the unit seems a bit unfinished. It looks something like an electronic turtle with its head sticking out. Once pushed into place, however, the board is hidden. Also, GEORAM is a space hog, taking up about an inch more room than an REU at the rear of the computer. If you've got a wall right behind your computer, be prepared for "computer shove-out shock."

Another disadvantage is that GEORAM is a tad slower than the REU, but the difference is negligible in most cases. This relative slowness is due to the fact that GEORAM doesn't use direct memory access (DMA) chips like those in the REU, and this is also the reason that GEORAM cannot be used as a RAM expander outside of GEOS.

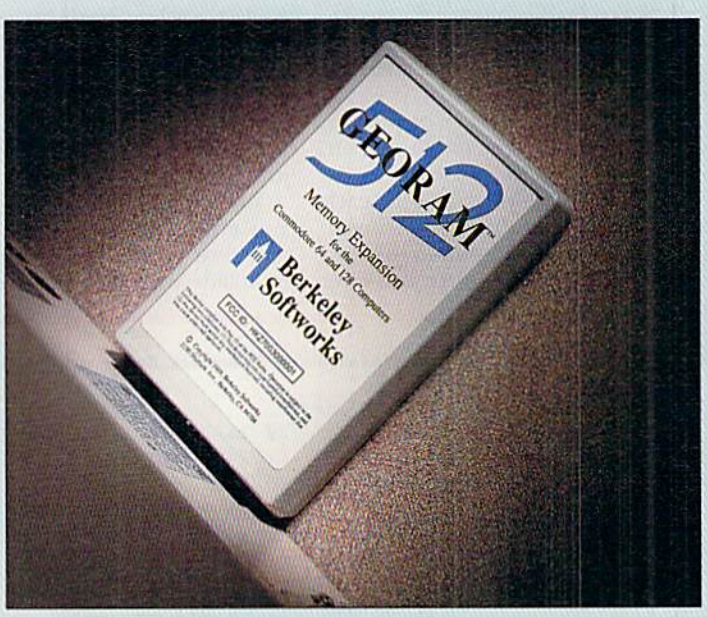

Ironically, using any RAM expansion entails some sacrifice in efficiency. Because RAM is erased every time you power down, you must re-copy your data into and back out of RAM every time you use GEOS. That takes time and some getting used to. It's also quite possible to absentmindedly copy the contents of your RAM disk to your physical disk when you mean to do just the opposite. The result is a loss of data.

With that said, I wouldn't be without RAM expansion. In choosing between GEORAM and a 1764 or 1750 REU, I'd purchase GEORAM because it's less expensive, has a full 512K of RAM, even for the C-64, and it's probably the only one available. If you use GEOS and you don't have an REU already, dial 1-800-888-0848 (extension 1744) now; or write Berkeley Softworks at 2150 Shattuck Ave., Berkeley, CA 94704. It's time to introduce your Commodore to a frisky young filly named GEORAM. ■

Mark Jordan, author of RUN's *128 Mode column and long-time GEOS enthusiast, is a high school English teacher by profession.*

GEORAM may look a bit like a turtle, but it's fast as a jackrabbit.

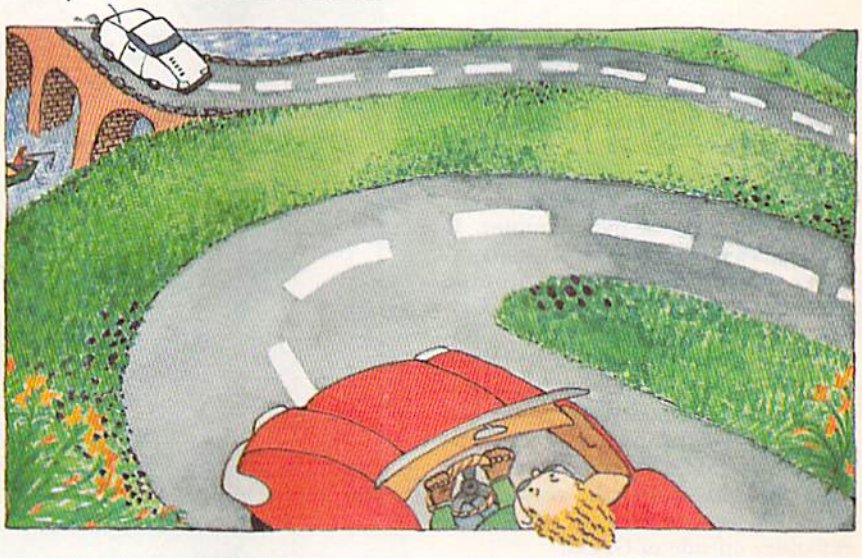

GEORAM plugs into the expansion port of your computer—and protrudes considerably.

Dodge 'Em

Only your defensive driving skills will avert a disastrous head-on crash.

By TONY BRANTNER

Ever have days when everyone on the road seems to be looking for an accident? Your defensive driving skills get lots of practice, don't they? In Ram Rod, those skills are put to the test as you try to remove the dotted lines from the middle of the road while dodging a computer controlled crash car. One or two people can play at a choice of three difficulty levels.

The game screen shows four concentric rings of highway, each marked with a dotted line. Breaks in the rings enable you to drive from one road into another. The red car, which is controlled by a joystick in port 2, belongs to player 1; the green car in the two-player version belongs to player 2 and is controlled by a joystick in port 1; the computer's car is white. Running scores are displayed in the center of the screen.

At the start of each game, you can adjust the difficulty level, displayed at the top-left of the screen, by pressing F1. To change the number of players, shown at the top-right of the screen, press F3. F5 starts the action.

A game lasts five rounds, with each player having one turn per round. When you press the firebutton to begin your turn, your car starts traveling counterclockwise around the course, while the white crash car moves clockwise. Since you have no brakes, you must rely on acceleration and steering to avoid the crash car and burn up dots. Use the firebutton as a gas pedal, and, when you reach an opening, use the joystick to change lanes.

You receive ten points for each dot you erase, and your turn ends when you clear all the dots from the course or collide with the computer's car.

Using *RUN*'s Checksum program, type in Listing 1 and save a copy to disk. Then run the program to write Ram Rod to your disk. Although it's written entirely in machine language, Ram Rod can then be loaded and run like any Basic program. R

Tony Brantner, a carpenter by trade, is also a self-taught computer programmer who appreciates the C-64 for its excellent graphics potential.

GOLD MINE

Fight or flight, bobble or bounce; these tips have bite, bring trouble and trounce!

By LOUIS F. SANDER

AFTER BURNER: To get through level 3, put your plane in the lower-right corner of the screen. Enemies won't hit you. To refuel, aim for the lights near the tanker's engine. To destroy the fortress on level 7, shoot out the engines.

—SCOTT DEYOUNG
GRAND RAPIDS, MI

BATMAN: THE CAPED CRUSADER: Duck when you're up against toy penguins or soldiers. Their bullets won't hit you. You can't climb ladders that are facing you. Climb ladders positioned sideways.

You can usually get an enemy off the screen by high-kicking him repeatedly. On a roof, high-kick your man while facing the edge; he might fall.

—DARRELL BUCKHAULTS
ADDRESS UNKNOWN

BUBBLE BOBBLE: In some circumstances, a valuable door will appear. This screen, containing a cute character and some diamonds, is worth 400,000 points or more. For the door to appear, you must have the red tennis shoe from the first level, and you must keep it to level 20. If you get an umbrella between levels 15 and 20, the door will appear on the next screen past number 20.

Often, another shoe on levels 17 and 33 gives your brontosaurus more speed but doesn't count toward the door. If the shoe doesn't appear on the first screen, press Q to quit, then restart the game until it does.

While it's possible to get over a million points without a door, I doubt if you'll reach two million without it. As long as you keep the original shoe, doors normally appear on levels 20, 30, 40, and so on.

Avoid umbrellas in early levels, since they take you past the levels that can give you bonuses and lots of points. An umbrella on level 11 will take you past 13, a particularly tricky level. Umbrellas past 15 are usually helpful.

Yellow, green or pink bottles place some items on the screen, each worth 500 points. Pick them all up to get an extra 100,000 points. On some levels, notably 2, 14, 15, 20 and 25, it seems impossible to get them all.

The red ring allows extra points for running, the pink one for jumping and the blue for blowing bubbles.

The red lamp gives rapid firing power, which continues to the next screens if you don't get hit, and extra points for running. The yellow one allows rapid firing.

When the letters spell EXTEND, you get an extra man. Don't take risks to get letters, though, because the extra man isn't worth losing a man and all your extra powers.

—MARY WILSON
CLEARWATER, FL

F-14 TOMCAT: This helps you land safely on a carrier: Line up with the carrier, bring thrust to one-third full power, dive to 100 feet. When the stern of the carrier goes by, gently lower your nose. After touchdown, turn off your engines.

—JAMES ANTHONY FOGARTY
VIRGINIA BEACH, VA

FLIGHT SIMULATOR II: In Editor mode, change the plane's acceleration number to 65535 after take-off to improve its ability to perform stunts. The plane will accelerate to 4000 rpm, using no fuel as far as I can tell.

—BRETT DE JONG
FORT DEPOSIT, AL

INDIANA JONES AND THE LAST CRUSADE: In the first level, climb down the first rope and stop just before reaching the ledge. Wait for the man to shoot, then continue down. Go to the right until you reach the rope at the end of the first tunnel. Wait for the guy to climb down the rope and back up, then grab the torch and follow him up. Continue to the next level. Walk to the right, then jump onto the first rope. Climb down and jump onto the second rope. Climb until you can't go further, then jump to the left. You should hit the top of the platform and jump all the way to the bottom. Continue to the left and up the castle wall. In the third level, the diary is on the bottom-left corner of the airship. The exit is in the middle of the right side. Get the diary and exit the airship. In the final level, speed is the key to success. Jump over the blades and jump from tile to tile, remembering the letters on the tiles, since you'll repeat the process later with false tiles. Jump onto the correct tiles and get the grail.

—BRUCE STUART
HEALDSBURG, CA

JORDAN VS. BIRD: On dunks like Kiss the Rim, pull down while in the air. On the Two-Hand Hammer and similar dunks, pull diagonally left and down.

—BIFF TANNEN
HILL VALLEY, CA

PLATOON: Find the secret explosives to destroy the bridge. Then find a flashlight and map in one of the houses. Now go to the largest hut. Go right until you find a door in the floor. Stand on it and press the firebutton. It leads to the underground tunnels.

—CHRIS DENICOLA
HAZLETON, PA

QIX: To pass a level quickly and easily, draw little boxes leading towards the top. When the Sparx come, draw a line out to the side. When you reach the top, the Qix will have to move to one side of the screen. The other side will be colored in.

—RYAN ONEGLIA
LITCHFIELD, CT

ROCKET RANGER: When you catch up with the zeppelin, earn her trust by saying: You'll never believe me; I'm only here to help; I want to help you; Let's start again. On the sequence with both of you in the electric chair, say: Okay, ►

I'll talk; Let me go first; Let the girl go, then I'll talk.

—CAMERON FRYE
CHICAGO, IL

POOL OF RADIANCE: To double your experience, boot the game and load a saved game. Remove all the characters from your party, then turn the computer off and back on. Reboot the game, but don't load the saved game; just add the characters back to the party. When you begin adventuring, you'll start at the beginning of the game, but with all your previous supplies and experience. Go through the easy stuff again, doubling your experience and the important items you found the first time. Repeat this as often as you want.

When you find an item to copy, copy your Save disk or make another Save disk. Remove from the group the person with the item you want copied. Add him back to your party and trade the item(s) or money to the other characters. Now put the copy you made back into the drive. Remove the character who previously had the item(s) or money. Put the original disk back into the drive and add the character to the party. He'll have all the equipment he had before, and the other characters will have the equipment he traded them. Do this as many times as you like.

—SCOTT CONSTANTINE
AURORA, CO

SIMCITY: To build land in the water, first build power lines and/or roads out into the water where you want the land to be. Set fire to all the roads and power lines you built in the water; then bulldoze over the fires. You'll then have islands ready to accept your building.

—ANDREW ORTHMANN
LA CENTER, WA

TETRIS: At level 9, the pieces drop quickly. If you've mastered that level, you probably had the music on. For a real challenge, select FX instead of MUSIC. The pieces will drop faster. Make the pieces drop slower by "rubbing" them against the sides of the board.

—MIKE POLLOCK
ARNOLD, MD

ROBOCOP: On level 5, climb halfway up the stairs, then shoot the Thugs on the next floor.

—JASON HAMMETT
ADDRESS UNKNOWN ■

To submit your own C-64 or C-128 game tips for consideration, send them to Gold Mine, PO Box 101011, Pittsburgh, PA 15237. Put your name, complete address and Social Security number on every sheet of paper you send, and please use 8½-by-11-inch paper. Also be sure to state which Commodore computer your tip is for. Neatness and clarity count. RUN *pays $5 per submission upon publication.*

To order a book of over 1200 Gold Mine tips on 500 games for Commodore computers, call TAB Books at 800-822-8158 (in Pennsylvania, call 717-794-2191). Ask for Book #3323.

ATTENTION : UPGRADING to an IBM?
Then you need **BIG BLUE READER**
New C128 Version 3.1

Big Blue Reader transfers word processing, text, ASCII, and binary files between Commodore and IBM MS-DOS disks. ***1571 or 1581 Disk Drive is required. Does not work with 1541 drives.***
Fast and easy to use. Transfers MS-DOS files on 160K-360K 5.25" & 720K 3.5" disks; Including MS-DOS Sub-directories.
Big Blue Reader 128 supports: C-128 CP/M files, 17xx REU, 40 or 80 columns, and much, much more.
Big Blue Reader 64 available separately only **$29.95**
BBR 128 V3 upgrade available; Send original BBR disk and $18

BIG BLUE READER 128/64 only $44.95

New BIBLE SEARCH
***Fastest* Complete Bible on Disk!**

Complete Old and New Testament on ONLY seven disks; New Testament Version on only two disks. The Fastest word search available: Word(s) in text are found and displayed in seconds!
Includes C64 and C128 programs.
Please specify 1541, 1571 or 1581 disks.
Complete Old and New Testament (KJV or NIV) $69
Both KJV and NIV Complete Bible Search only $125
New Testament Version KJV $25 - NIV $30)
Both KJV and NIV New Testament Bible Search only $49

Order by check, money order, or COD. US Funds only.

128 Mode

Explore some of the best among highly useful programs that are off the beaten software track.

By MARK JORDAN

QUESTION: WHAT'S THE BEST-KEPT secret in Commodore-land? Answer: "Smallware," my term for software that often isn't available across the counter. It's a mix of public domain, shareware and inexpensive commercial software that's written by hackers, true believers and obscure programming geniuses.

This month we'll take a look at some of the best smallware that has surfaced since the 128 hit the scene. The addresses given are the most up-to-date I could find. You'll need to write the authors for price and availability.

Disk Utilities

Disk Whiz, by Kevin Hisel (2024 Greendale, Champaign, IL 61821), is *the* public domain disk utility program to have, in the opinion of almost everyone I talked to while researching this article. And I agree. It's not only fast, but also extremely attractive and intuitive in use, two qualities many smallware projects lack. Disk Whiz lets you run, print (to screen or printer), copy, rename and scratch files with ease.

It works with the 1581, knows how to handle subdirectories and reprograms the numeric keypad so you can jump nimbly about the screen. If you could place this program on all your disks and autoboot to it, you'd have one mean startup kit. I highly recommend Disk Whiz.

Speaking of autobooting, I also recommend **Autoboot Manager**, assembled by Victor Singleton (CIS #74676, 323 or Peregrine on QuantumLink). This is a compilation of programs from Kevin Hisel, Fred Bowen and Terry Ryan, three 128 programmers *extraordinaire*. Autoboot Manager enables you to create boot disks that will set their own screen colors, create a text message, boot from 64 mode, call a short machine language program, show a directory, validate a disk, and so on. It's great for creating a personalized disk. And here's the good news—it supports the 1581.

Nerd Copy, by Ed Parry (8711 Langdon Ave. #8, Sepulveda, CA 91343), may be the world's fastest-loading file copier for the 128, and it works with the 1581, 1571 and 1541. It loads in one second (I'm not exaggerating) and copies files about as fast as any program on the market.

Disk Doctor, by Kevin Hisel, and **Disk Noser**, by Ed Parry (see addresses above), are useful programs that allow you to edit your disks, sector by sector. Both have lots of options and power, though I think Disk Doctor's Hunt option, which lets you search through an entire disk for a string of characters, makes it the superior program.

Productivity Programs

I'm a teacher, and I've seen a lot of gradebook programs, but **Grade*Star**, by Tom Sipe, is tops. It's available on Loadstar-128 disk #2, from Softdisk Publishing, 606 Common St., Shreveport, LA 71101; phone 318-221-8718.

Although **PenPal**, by Steve Boerner (PO Box 364, Brockport, NY 14420), dates all the way back to 1986, it's still a dandy little compiled Basic database, with an attractive and intuitive interface. Its chief drawback is that it works only in 1541 mode.

Ultraterm 2.01, also by Steve Boerner, is a program I don't have, since I don't telecompute, but all my telecomputing buddies tell me this one is a beauty. Having seen Steve's work on PenPal, I trust they are right.

I also recommend **TMDMO2.0**, by Rick Matthewson (4 Rose Rd., Rochester, NY 14624). Aside from the horrendous name of this program (sorry, but I like to be able to pronounce names), this text manager is excellent. It's designed to create or edit files for sending via modem, but I found it useful for doing various other things, such as 1581 partitions, SEQ/PRG capabilities, PET/ASCII translation, printing from RAM or the disk, and so on.

Programming Utilities

ML.Aid, by Joseph Caffrey (79 Kellers Lane, Plymouth, PA 18651), is a handy-dandy machine language routine that allows you to scroll up and down your 80-column Basic program lines while you edit. In addition, you can search for and replace variables or text within those lines. I love this one and use it whenever I develop Basic programs.

When you want to incorporate the 1351 mouse into your own programs, don't overlook **m.1351.128.bin**, a little machine language program by Hedley Davis and Fred Bowen that comes with the 1351. It's easy as pie to install (just put it on your disk, BLoad it, and SYS 6144). Sprite 1 becomes your pointer. Why re-invent the wheel when m.1351.128.bin (another ugly name) is as round as a 5¼-inch floppy.

Graphics Utilities

Gas! 128, by Bruce Bowden (3110-B Lawndale, Greensboro, NC 27408), is a graphics utility that specializes in 40-column wizardry. It is option-laden (sprites-to-graphic screens, 4-bit color shifts, vertical and horizontal compression, and much more) and works with Koala and Doodle! files. Moreover, it will compress files for quicker saving and loading times.

A simple graphics charmer is **Macview 128D**, by Bryan Williams (Rt. 4, Box 35, Princeton, KY 42445). Its one and only use is to show converted Macintosh files on the 80-column screen.

A Plug for the Boss

Serious 128 bargain-hunters need look no further than the 128 disks *RUN* magazine offers. These are the cream of the smallware crop. For productivity, **Super Starter Pak** contains seven 128-specific programs of extremely high quality: RUN Script 128, RUN File 128, RUN Calc 128, RUN Term 128, RUN Paint, RUN Shell, and Label Base. For entertainment, **Fun Pak 128** offers eight excellent games, four of which are 80-column goodies. The best is Bloodstar, a sophisticated strategy conquest.

Naturally, this article barely scratches the surface of the smallware mother lode. Write to me c/o *RUN* and tell me of any you use that make your computing life happy. ■

The Best Prices & Service

GEOS & Mouse Combo Save Up To $40.55

GEOS & Mouse Combo. Get the most out of your C64 or C128 with GEOS and a mouse. Combine the great features of GEOS - a Mac-like user interface, a graphic word processor, and more - with the ideal input device - a high quality mouse.

To help you bring your Commodore into the graphics age, we're offering an additional $5.00 saving off our already low prices. You'll save up to $40.55 off retail pricing. To take advantage of the savings, just order one of the packages below:

Now For Amiga, Too!

2400 Baud C64/C128
$79.95

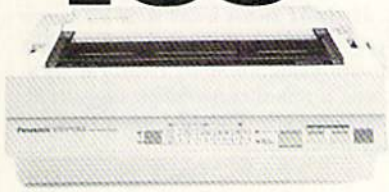

1200 Baud C64/C128
$59.95

Both the Minimodem-C and C24 are completely Hayes compatible (not just partially compatible like the 1670 and some Avatex models) **and** 1670 compatible. This means they'll work with ALL communications software for the 64, 64C, and 128. Key features include seven status indicators, Busy Detect, DTR signal support, High Speed Detect Line, and Auto Answer/Auto Dial. Includes Multiterm 64 and 128 software so you can start communicating right away, plus a free trial hour on CompuServe! Full-year warranty.

The Amiga versions of the Minimodems are equipped with a female connector to plug directly into the Amiga 500 or 2000. They need no external wall plug for power, and they use the Amiga's internal speaker for maximum fidelity.

Minimodem-C24 (2400 Baud for C64/C128)	88148	$79.95
Minimodem-C (1200 Baud for C64/C128)	81576	$59.95

COMMODORE CLINIC

Correcting vertical screen bounces and what to do with a defective 1351 mouse.

By ELLEN RULE

Q *Over the years, I've used a 1660 modem to access other modems and BBSs, but when I try to make a 1660 answer (pick up), I'm stumped. Will it answer, and if not, how can a call be received?*

—TED CHIDESTER
SANTA FE, NM

A First, to receive a call from another computer, set the Answer/Originate switch on the left side of the modem to A for Answer. Set the calling modem to Originate. Next, the telecommunications software must have an answer function programmed into it, along with commands that your modem understands.

The Common Sense Terminal Program that comes with the C-1660 has 1660-compatible answer capabilities. Its Ring message indicates that someone is calling you. Press the control and A keys at the same time (control/A) to answer a call. Press control/H to hang up. These features are not unique to the Common Sense program; many other commercial and public domain terminal programs have answer capabilities. The members of the BBSs that you access will probably be glad to share the name of their favorite telecommunications program.

If you want to program the modem yourself, the 1660 manual lists a series of steps required to answer a call. With a C-64 or 128:

1. Set the answer/originate switch to A (Answer).

2. To automatically answer, first detect if the phone is ringing by entering:

```
IF (PEEK(56577) AND 8)=0 THEN
PRINT "RINGING"
```

then program the phone to be off the hook with:

```
OH=56577:HI=32:LO=255-32:
POKE(OH+2),(PEEK(OH+2) OR HI):
POKE OH,(PEEK(OH) AND LO)
```

3. Program the phone to hang up when you're done with:

```
POKE OH,(PEEK(OH) OR HI)
```

By monitoring the carrier-detect line in unattended Auto Answer mode, the computer can be programmed to hang up after losing a carrier. The Basic code for this is:

```
OH=56577:
IF ((PEEK(OH) AND 16)=16) THEN
  PRINT"NO CARRIER":
IF ((PEEK(OH) AND 16)=0) THEN
  PRINT "CARRIER DETECTED"
```

Q *My 1351 mouse won't move the cursor up and down the screen. It fails after being used about an hour. I clean it regularly, and a visual examination suggests it's okay mechanically. Should I get it repaired or junk it?*

—DAVE H. SHADE
COLUMBUS, NM

A It will cost as much to repair your mouse as to buy a new one. If your mouse is defective, you may order replacement parts from an electronics supply house. A problem that develops an hour or so after being used often points to heat buildup. However, your problem is probably related to the computer chip that receives and interprets the mouse's signals. Try a different mouse; if the same problem occurs, have a technician run diagnostics on your computer to determine if a CIA chip or some other component is faulty.

Q *I use my C-64 with a TV as monitor. The TV screen bounces up and down. What can I do to correct this? I've connected it to a different TV with no luck. I tried it with a monitor at the store where I purchased my 64, and it worked fine.*

—JOHN F. MASON, JR.
BALTIMORE, MD

A You've made a good start with your troubleshooting techniques, narrowing the problem to environmental influences or faulty RF modulation. You've confirmed that the VIC chip is producing a good video signal, but haven't tested the signal after it's been modulated (within the 64) with an RF signal before it's sent to the TV.

There are some tricks you can try to determine if your C-64 is producing a defective RF signal. Try another 64 with your TV. If the problem recurs, something magnetic or electrical in the area may be interfering with the RF transmission. If this is the case, move the power supplies for your computer and drive away from the TV, without tangling the cables. Try a different TV/game switch to rule out a defect in that component. On the other hand, if a different C-64 works fine in your environment, then your 64's RF modulator is the likely culprit, and you should get it fixed.

Q *I want to learn more about my C-128, write my own programs, use Peek, Poke and CHR$ commands, use not only Basic but also machine language, and even use a modem. But most magazine articles are over my head—I can only guess at the meaning of the computer lingo. Can you help me?*

—RALPH STRACHAN
SANTA CRUZ, CA

A I credit much of what I know about computers to reading magazines such as *RUN*, and to fellow user-group members who helped me interpret what I read. Your local user group might offer beginners' classes or phone numbers staffed by knowledgeable members.

Another learning tool for a beginner is QuantumLink, the Commodore Information Network. This commercial bulletin board service (BBS) is accessed via modem and Q-Link software, which you can get by calling Q-Link's customer service at 1-800-392-8200. Or, purchase the 1660 modem offered by *RUN* (call 1-800-343-0728), which comes with Q-Link software. Once online with Q-Link, it's easy to choose your activities from the menus using the 64's cursor and function keys. Other users and Q-Guides are available to answer your questions, or you can leave questions in the message areas.

Also read the manual that came with your computer, and check out your local library and bookstores. ■

64 Doctor

A professional diagnostic cartridge for your Commodore 64

- Simply insert cartridge & port connectors
- Tests serial, user and control ports
- Allows for a full keyboard test
- Many chips tested including NMI & IRQ
- Sound channels and graphics tested
- BASIC Kernal & ROM tested
- Screen table clearly displays the results
- All defective chips are highlighted
- Location and CBM part numbers displayed
- Buy the parts and repair it yourself
- Or tell your dealer what's wrong & where

SUPER-CARD +

Have you been watching the war over the "best" backup utility? We would like to state the facts, and put this war to an end . . . once and for all!

- Utilities Unlimited was the FIRST to create a fully functional whole track copier. Our prototype was designed December 6, 1984. Since that time, the product has evolved into the most successful archiver ever created!
- Utilities Unlimited was FIRST in creating this product for ALL disk drives: 1541/1541C/1541-II/1571/SX-64/ALL Commodore compatibles. While it is true that some of the units required soldering, it is very simple. We offer an installation service for those customers that do not wish to install the card themselves.
- Why would you WANT to wait for parameters? During that waiting period, your precious software could be destroyed! With **SUPER-CARD+** you need not wait! The software is user selectable. So if special changes are required, you can do it yourself! NO WAITING FOR MONTHS. What about those special changes? They (if actually required) are available by calling our office, or through QUANTAM LINK. We can tell you how to backup your software THE SAME DAY YOU GET IT! All versions of our **SUPER-CARD+** software include the latest settings. Even our competitor agrees that we can copy EVERYTHING with the proper settings . . . and we have them!
- Updates — Approximately every 6 weeks we release an update of our software that includes new utilities, copiers, and settings. ALL updates are $5.00... which we feel is a very reasonable fee. Updates are NOT required.
- Across the nation, software rental stores use **SUPER-CARD+** to backup their originals. Our **SUPER-CARD+** has been tested in Europe and has been chosen as the BEST backup utility!
- **SUPER-CARD+** comes complete with the hardware card, documentation, and the latest software release (version 3.0).

So, the facts are on the table . . . you decide for yourself. By the way, they say that *"imitation is the highest form of flattery"* . . . thanks guys!

FINAL CARTRIDGE III

No other cartridge adds 64K of ROM. The additional 32K of RIM is dedicated to a unique desk top accessory, setting it apart from the other cartridges.

Final Cartridge III is inspired by the Amiga and Macintosh. The function keys are laid out logically and are easy to remember. The tool kit is the largest collection on any cartridge (almost 30 commands). Just to mention some of the features — Fastload (15X) Backup, Freezer, Printer FR, Word Problems, Pop-Up Calculator, Color Screen Dump and Windows. **All for only $69.95**

Allow 3-4 Weeks for Delivery
All Sales Are **FINAL**

VIDEO BYTE II - the only FULL COLOR! video digitizer for the C-64, C-128

Introducing the world's first **FULL COLOR!** video digitizer for the Commodore C-64, 64-C, C-128 & 128-D computer. **VIDEO BYTE** can give you digitized video from your VCR, B/W or COLOR CAMERA or OFF THE AIR or CABLE VIDEO (thanks to a fast! 2.2 sec. scan time). New version 3.0 software features full RE-DISPLAY with MULTI CAPTURE MODE, MENU SELECT PRINTING, EXPANDED COLORIZING FEATURES, SAVE to DISK FEATURE AND MUCH MORE!

FULL COLORIZING! is possible, due to a unique SELECT and INSERT color process, where you can select one of 15 COLORS and insert that color into one of 4 GRAY SCALES. This process will give you over 32,000 different color combinations to use in your video pictures. **SAVES as KOALAS!** Video Byte II allows you to save all your pictures to disk as FULL COLOR KOALA'S. After which (using Koala or suitable program) you can go in and redraw or recolor your V.B. pic's. **LOAD and RE-DISPLAY!** Video Byte II allows you to load and re-display all Video Byte pictures from inside Video Byte's menu. **MENU DRIVEN!** Video Byte II comes with an easy to use menu driven UTILITY DISK and digitizer program (64 MODE ONLY). **COMPACT!** Video Byte II's hardware is compact! In fact no bigger than your average cartridge! Video Byte comes with it's own cable. **INTEGRATED!** Video Byte II is designed to be used with or without EXPLODE! V5.0 color cartridge. Explode! V5.0's menu will return you to VIDEO BYTE II's menu. Explode! V5.0 is the **PERFECT COMPANION!** Video Byte II users are automatically sent **FREE SOFTWARE** updates along with new documentation, when it becomes available. **PRINT!** Video Byte II will printout pictures in BLACK and WHITE GREY SCALE to most printers. However, when used with Explode! V5.0, your printouts can be done IN FULL COLOR 8x11's on the **RAINBOW NX-1000, RAINBOW NX-1000C, JX-80, Seikosha3000 AI. (OKIDATA 10/20's (print larger 6"by9") USER SLIDE SHOW program w/auto or manual display is standard with VIDEO BYTE program. And can be backed up!)**

ONLY $79.95

Why DRAW a car, airplane, person or for that matter. . . anything when you can **BYTE it . . .Video Byte it instead.**

NEW! SUPER CARTRIDGE By The Soft Group EXPLODE! V.5

The **MOST POWERFUL, DISK DRIVE and PRINTER CARTRIDGE** ever produced for the COMMODORE USER, Super **USER FRIENDLY** with all the features most asked for. New FEATURES. . . (a) Faster non-blanking FASTLOAD. (b) MIRROR imaging of all HI-RES screens. (c) 4 Way color selection with insert, for all HI-RES screens. (d) Infinite FILE COPY for all SEQ. & PRG. files, copy your file only once, then write that file to as many disks as you like. . . great for single file copying by small user groups. (e) **FULL COLOR PRINTING of ALL COLOR HI-RES & MULTI-COLOR SCREENS to ALL COLOR DOT MATRIX PRINTERS** (not for INK JET printers). (f) Direct ONE KEY access back to VIDEO BYTE software thru EXPLODE! V5.0's MENU. (g) Supports all popular printer interfaces. (h) FREE upgraded utility disk.

ONLY $44.95

THE 128 SUPERCHIP - A, B or C (another first)

A — There is an empty socket inside your 128 just waiting for our **Super Chip** to give you 32K worth of great Built-in Utilities, all at just the Touch of a Finger. You get built-in features: **Files Copier, Nibbler, Track & Sector Editor, Screen Dump,** and even a 300/1200 baud **Terminal Program** that's 1650, 1670 and Hayes compatible. Best of all, it doesn't use up any memory. To use, simply touch a function key, and it responds to your command.

B — HAS SUPER 81 UTILITIES, a complete utility package for the 1581. Copy whole disks from 1541 or 1571 format to 1581. Many options include 1581 disk editor, drive monitor, Ram writer and will also perform may CP/M & MS-DOS utility functions.

C — "C" IS FOR COMBO and that's what you get. A super combination of both chips A and B in one chip, switchable at a great savings to you. **All Chips Include 100 Parameters FREE!** Chips A or B: **$29.95 each** Chip C: **$44.95 each.**

From page 16.

Frightmare, to name a few of them).

Positively packed with temples, tunnels, graveyards, pyramids and other fearful features, Nightmaresville encompasses more than 80 single-screen rooms, each sprinkled with goodies to aid your dream quest. Besides revolvers and bullets, you'll find powerful one-shot artifacts, like watches that slow time and wings that boost jumps, plus old standbys, like holy water and crosses. Movable teleporters offer quick getaways, rings confer extra lives and picking up a chalice produces an immediate status boost. Mainly, however, you score dream points by destroying monsters. Since the latter are replenished and goodies are not, the trick in each room is to maximize level gains and reach an exit that's well stocked for the next chamber's challenges.

No dream, even a really bad one, lasts forever. Each time you enter a new room, the game clock advances six minutes. Come 8:12 AM, it's morning, and you must awaken. With skill and a bit of luck, your performance will rate placement on the Top Five Dreamers roster. Hopefully, you won't be too sleepy to remember your achievement, because this roster is not maintained on disk.

Just one of many dream states in Frightmare.

Frightmare delivers good artwork and decent sound, but animation and control of your action figure qualify as barely adequate. The limited run-and-jump repertoire, aside from a magnetic stick-on look, makes getting into each room's puzzles more work than it should be. Along with no save-game feature or option to set the starting room, the result is more repetition than many players will tolerate. Fortunately, restarts are speedy, and the controls are learnable. If you don't mind numerous throwaway sessions, you could be in for many sleepless nights of Frightmarish fantasy. *(Avantage/Accolade, 550 S. Winchester Blvd., Suite 200, San Jose, CA 95128. C-64/$14.95.)*

KNIGHTS OF LEGEND ..... A–

In this role-playing game that's set in the medieval realm of Ashtalarea, your goal is to develop a powerful band of characters and rescue the great knight, Segallion, from the Dark Lord, Pildar—but only after you have first completed 23 mini-quests.

To create a character, you enter a name and choose a character's race, sex, class and appearance. The keyboard controls character movement, and a se- ►

VIDEO BYTE II the only FULL COLOR! video digitizer for the C-64, C-128

Circle 65 on Reader Service card.

ries of icons across the bottom of the screen lets you choose the action you wish to perform. For instance, you can communicate with non-player characters by first selecting the mouth icon and then typing your question. The only problem I had with this system is that the keys tend to repeat unpredictably, and the delete key won't erase them.

Knights of Legend offers a wide variety of magic spells, with the name of each based on the Elven language and consisting of five parts. You can build new spells by piecing together the proper syllables.

Unfortunately, Knights of Legend doesn't let you pool your characters' wealth. However, items can be transferred among your characters so you can always buy an expensive weapon with one character's gold, and then transfer it to a poorer character.

Despite the drawbacks mentioned above, Knights of Legend is a first-rate role-playing game, with images that, like most Origin games, show careful attention to detail. It comes with four double-sided, unprotected disks, a quick reference card, a map of Ashtalarea and an informative and entertaining handbook. *(Origin Systems, Inc., 110 Wild Basin Rd., Suite 330, Austin, TX 78746. C-64/$49.95.)*

—BOB GUERRA

SENTINEL WORLDS I: FUTURE MAGIC ..... A–

Someone is destroying cargo ships in the Caldorre System. Seventeen ships and many lives have been lost.

As commander of a Federation interceptor-class vessel, you and your crew of four have just undergone a grueling training program to prepare for your mission to find out what's going on and put a stop to it.

All the elements of a good role-playing game are here: You'll travel in space, decide whether to blast other ships, touch down on the planet, communicate with people on the street, discover deserted outposts, learn the politics and culture of Caldorre and explore its underground tunnels.

I had a few minutes of frustration loading the program: One disk is labeled "This Side: GAME DISK, Reverse Side: DATA DISK." The other disk is labeled "This Side: MAP DISK, Reverse Side: SAVE DISK." The first message you see after booting is "Insert Side Three." Normally, the front side of the second disk would be considered side three, but for some reason the program was looking for the back side of disk two. It later asked for side three again, but this time it would only accept the front of disk two! After I got it figured out, this turned out to be a most engaging and exciting game.

The graphics of the crew members, the planet surface and the underground are highly realistic, although the representation of your ship is a little primitive.

A very enjoyable and extensive game, SW1 should provide many hours of excitement and suspense for RPG lovers. *(Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404. C-64/$34.95.)*

—ART LEWIS KIMBALL

DOUBLE DRAGON II: THE REVENGE ..... A–

Alas, the joy of brothers Billy and Jimmy Lee proves fleeting. The nefarious Shadow Boss, Willy, has risen from the dead, and his first vile act was the murder of Billy's sweetheart, Marian.

You, either alone or with a friend, must battle more than 20 types of evil warriors. Your goals are the second defeat of the evil crime lord and the resurrection of Billy's girlfriend.

Divided into five difficult scenarios that must be completed within time limits, the action begins at a heliport. From there, you fight your way through a warehouse, out into the open countryside and finally to Willy's secret headquarters. Throughout the game, you use a joystick both to move in any of eight directions and to deliver blows with fists, feet and elbows.

Unfortunately, your opponents are not above using dynamite, shovels and even a ball and chain. However, you can turn the tables on your foes by seizing some of their weapons. This aspect, along with the ability to move in more than two directions, puts the software far ahead of similar contests.

DD II's graphics are generally of very high quality; however, they are, at times, marred by flickering. Also, while the control system is good, the instructions that explain it are a bit too brief. (You can overcome this by not moving forward after eliminating the game's first two nasties; you'll be able to practice all your moves in peace.)

Although it's challenging, Double Dragon II can also be very enjoyable. *(Mastertronic, 18001 Cowan St., Irvine, CA 92714. C-64/$34.99.)*

ATTENTION

ALL COMMODORE 64/64C, AND COMMODORE 128/128D OWNERS

A complete self-tutoring BASIC programming course is available that starts with turning your computer on, to programming just about anything you want! This course is currently used in both High School and Adult Evening Education classes and has also formed the basis of teacher literacy programs. Written by a teacher, who after having taught the course several times, has put together one of the finest programming courses available today. This complete course of over 220 pages is available for the **COMMODORE 64/64C,** and for the **COMMODORE 128/128D** computers. This course (Volume 1) will take you step by step through a discovery approach to programming and you can do it all in your leisure time! The lessons are filled with examples and easy to understand explanations as well as many programs for you to make up. At the end of each lesson is a test of the information presented. Furthermore, ALL answers are supplied to all the questions and programs, including the answers to the tests. Follow this course step by step, lesson by lesson, and turn yourself into a real programmer! You won't be disappointed!

FOLLOW-UP COURSE (Volume 2) – A 200 page self-learning course for each of the above named computers dealing exclusively with **sequential** and **relative files.** Our teacher uses a unique approach to file handling that was designed especially for students with absolutely no prior file handling experience. Yet by the end of the course you will be able to make up many of your own personal and business file programs.

Each course is only $21.95 plus $3.00 for shipping and handling. We have been developing and selling Commodore courses for over 6 years now and **if you do not think that we have the best self-tutoring course you have yet come across, then just send the course back to us within 10 days of receipt for the FULL $24.95 refund.**

Note: We also sell programming courses for all versions of the Amiga computer as well as a self-learning AmigaDOS course.

RUN's Checksum & Program Typing Hints

TYPE IN *RUN*'S CHECKSUM, which serves for both the C-64 and for the C-128 in either 40- or 80-Column mode, and save it to disk before running it. When typing in a program from *RUN*, first load and run *RUN*'s latest version of the Checksum program, which contains a new feature explained below. The screen will display a SYS number (49152 for the C-64; 3328 for the C-128) that deactivates and reactivates the Checksum. Always disable *RUN*'s Checksum before attempting to run another program. Note: You can abbreviate Basic keywords; spaces affect the checksum only when within quotes; and the order of characters affects the checksum.

When you press return after typing in a program line, a one-, two-, or three-digit number from 0 to 255 appears in the home position. If this number matches the checksum value in the program listing, the line as you typed it is correct. If the number that appears doesn't match the checksum value, compare the line with the magazine listing to find your error. Then move the cursor back up to the line and make your corrections. Now, after you press return, the correct checksum value should appear. Continue entering the listing until all the lines have been correctly typed. Then deactivate *RUN*'s Checksum, using the appropriate SYS number, and save the finished program.

We sometimes get letters and phone calls from new readers who have typed in the Checksum program for the first time. They are confused by the "Out of Data Error in Line 30" message that appears when they try to run the Checksum program. Understandably, they compare line 30 of the listing with line 30 as they typed it in, and cannot find anything wrong. The message unintentionally misleads them into thinking the error is in line 30, whereas the typing mistake is actually somewhere in one of the Data statements in lines 190–350.

So, we've added a new feature to the Checksum program that alerts readers to the number of the Data statement line in the Checksum program where an error has actually been made. **Note that this feature works *only* on the Checksum program itself, and not on any other program listing in *RUN*.**

After you've entered and saved the Checksum program to disk, run it. If you've made any errors in any of the Data statements, the program will give you a specific line number. Find the mistake, correct it, press return, save the program and run it again. Repeat this procedure until the Checksum program runs flawlessly.

Control Characters Demystified

All the graphics and control characters in the listings in *RUN* have been translated into understandable key combinations. They are the instructions you see inside the curly braces. For example, {SHIFT L} means you hold down the shift key while you press the L key once. You do *not* type in the curly braces. What appears on the screen will look quite different from what is designated inside the braces. Here are some more examples:

{22 SPACES}—press the space bar 22 times.

{SHIFT CLR}—hold down the shift key and press the clr-home key once.

{2 CRSR DNs}—press the cursor-down key twice.

{CTRL 1}—hold down the control key and press the 1 key.

{COMD T}—hold down the Commodore logo key and press the T key.

{5 LB.s}—press the British pound key (£, *not* #) five times.

Refer to the following paragraphs for any other Error messages you get from running any program listing in *RUN*.

Other Error Messages

Having heard from many users over the years about their difficulties with typing in listings, we've identified a few recurring problems that plague many people but are easy to fix. So read on and see if your problem is one of these.

- You get an "Out of Data in Line xxx" message. This means that a program line was reading from Data statements and reached the end of the data before it was done reading. There are two possible problems.

One might be with the program line that reads the data, usually a For-Next loop. Make sure you have the proper values for the loop, because if, for example, the listing has a loop of 0 to 150, and you've typed 0 to 160, you'll get the Out of Data message. If the loop is correct, then the problem lies in the Data statements themselves. One possibility is that you omitted a whole line of data. That's easy enough to find and correct. It's more likely that you've skipped one or more individual data items or typed in a period instead of a comma, which causes two data values to be read as one number. Check your typing carefully against the listing. Using *RUN*'s Checksum program when you type in listings from the magazine should help in this case.

- You get an "Illegal Quantity Error in Line xxx" message. This means you've read a number from a Data statement and tried to poke it into a memory address. The error occurs because the number is larger than 255 (the largest value a memory address can contain), which means that somewhere in your Data statements you've made an error by typing in a number larger than 255. Again, this is easy to check for and correct. First look in your Data statements for a number larger than 255. You might have added an extra digit, or perhaps you ran two numbers together (23456 instead of 234,56).
- You get a "Syntax Error in Line xxx" message. This could be almost anything. What it tells you is that there is something wrong in the indicated line. Usually you've misspelled a Basic keyword or omitted some required character. List the line and examine it carefully.
- You get an "Error in Data" message. This occurs in programs that add up all the data as read, and, when finished, compares that sum with what it should be if the data were typed in correctly. If it isn't the same, it means an error somewhere in typing the Data statements. Go back and check the data carefully. Correct the mistake(s), save the new version and try again.
- Finally, we urge everyone who intends to type in one of our listings to use *RUN*'s Checksum program, which will help you avoid every mistake we've mentioned above, except that it won't detect the omission of a line. R

Listing. *RUN*'s Checksum program. This program is available on *RUN*'s BBS for users to download.

JUNE

COMING ATTRACTIONS

EVERYTHING YOU ALWAYS WANTED TO KNOW ABOUT THE 1581—
Welcome to the world of the 3½-inch disk. This article will answer your questions, such as: Can I use the 1581 with my C-64? What software is available and compatible with it? Is it better than a floppy drive? And others.

TROUBLESHOOTING AT HOME—
Some general advice on maintenance and preventive care for your hardware, plus descriptions of a diagnostic chart and several software and hardware aids for ailing disk drives.

C-64 SURPRISE—
You won't believe your eyes when you run this program, which shows off dozens and dozens of the C-64's true colors.

READY, SET, THROW!—
Test your aim with this computerized dart game for the C-64.

AND THAT'S NOT ALL—
With next month's issue you'll also get a free pull-out programmer's reference card, a useful GEOS type-in desk-accessory utility, reviews, hints, tips, questions and answers, comments and news.

Say Hello To The Newest Member Of The Family!

THE GEOS COMPANION

Introducing the ultimate collection of GEOS creativity tools...and a whole lot more! With The GEOS COMPANION, you'll be a master of music, animation, games, clip art, utilities and more! As with all GEOS software products, the eye-catching icon-based interface is a breeze to learn and easy to use!

A Dynamite Personality!

The GEOS COMPANION is the best GEOS accessory ever published. And it's no wonder, when you discover all the top-notch creativity and productivity tools The GEOS COMPANION has to offer!

■ **GeoAnimator.** Create your own animations with this innovative graphics program, the only one of its kind! Try it! It's fun!

■ **GeoBach.** Compose your own hit songs or generate fantastic sound effects with this master musicmaker.

■ **GeoMusicPlayer.** This easy-to-use music player program lets you play the music files you've created with Geo Bach.

■ **Geos Utilities.** Get the most from GEOS with such powerful utility programs as Pattern Editor 2.0, File Merge, 1581 BootMaker, Autoloader and Batch File Copier.

■ **GEOS Games.** Includes the classic Breakout game in 3-D format, plus a challenging Master-Mind-like game that'll entertain the entire family.

■ **Clip Art.** Noted GEOS designer Susan Lamb has compiled her best collection of dozens of holiday and special occasion images for you to use in your cards, newsletters, memos, etc. Just cut, paste, and publish!

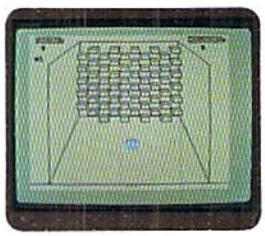

■ **PLUS!** A new assortment of distinctive fonts!

■ **Documentation book included!**

Distinguished Ancestry!

The GEOS COMPANION is the third in a series of fine GEOS accessories published by RUN Magazine, giving you total confidence in the quality and usefulness of The GEOS COMPANION. Plus, it is completely compatible with all GEOS software products. And perhaps best of all, The GEOS COMPANION is designed to work on both the C64 and C128.

Attractive Price!

The GEOS COMPANION comes with a modest price tag...just $24.97. And remember, as with all of RUN's software, your purchase is fully guaranteed for 30 days if you're not satisfied!

ORDER TODAY!

Ordering The GEOS COMPANION is almost as easy as using it! To get your copy, use this handy coupon or call 1-800-343-0728 and place your credit card order.

☐ **YES!** Send me The GEOS COMPANION for just $24.97!

It's Going to Take Ingenuity and Know-How to Win This War

COMBOTS

Build the Ultimate War Machine

Formidable alien robots have been sent to conquer the earth. To win this war, you have to develop the creative talents and computer savvy to build the ultimate COMBOT war machine.

In the tradition of Japananimation, the computer game, COMBOTS, pits you against virtually indestructible alien warrior robots. You'll need finances and successful salvage missions to acquire the parts to start building your army of COMBOTS. Most importantly, you'll need battle experience.

A Construction Program allows you to choose from or build your own broad range of weaponry, armor, sensors and drive trains. A Tactical Combat System matches you against another player or the computer.

In COMBOTS there is no formula for winning. Create the optimum design. Efficiently deploy your COMBOT and you may have a chance. Combots runs on the Commodore® 64/128.
